August 28, 1997

Special Edition 1

..En eterno descanso..

--Logo by Wendell "WaD" Davis III

P R E A M B L E

Welcome to this special issue of disC=overy, the Journal of the Commodore Enthusiast. This one is dedicated to John Kaiser (AKA Waveform), a coding dynamo and good friend to the NTSC C64 demo scene. John passed away last April, but his works live on. This edition presents a compilation of his best efforts for the enjoyment of all C64 fans worldwide.

- Mike Gordillo

The Collected Works of John Kaiser (aka Waveform)  
by XmikeX

This article includes the best of John Kaiser's creations for the C64. (One special jewel, Venturia, makes its public debut here). All files have been uuencoded for ease of transmission and require uudecoding into executable C64 binaries. A short description of the files, as seen below, is followed by the uuencoded versions.

disc-demo  
-----

The disC=overy demo was first published in disC=overy, issue 2, along with accompanying article -- a tutorial on 2D rotation. In its original release, it was split up into several files. It is presented here as a single, fully packed, executable file.

vectorwave  
-----

Vectorwave initially found itself into a millenium demo. Further plans included using it in a follow-up to the disc-demo expose' on rotation techniques. It is presented here as executable and source.

waveness 1 and 2  
-----

Waveness 1 was John's first public C64 demo. Waveness 2 included a morphing sequence whose data was derived from an x86 PC program, but the result was all C64 :).

wavestorm.mlm  
-----

Wavestorm was John's last C64 demo page. It was either going to be a stand-alone demo or bundled in an MLM production. Unfortunately, John never got to finish it. As a bit of trivia, I can claim credit for its name, as John indulged my suggestion of "Wavestorm" in deference to the kind of thunderous impact a 'Waveform demo' should make :). This version of Wavestorm has been enhanced by Roy Batty/MLM, and originally released by Roy Batty/MLM.

XwaveX  
-----

The XwaveX demo was part of the 1996 NTSC 4k contest and named after yours truly for reasons mentioned in the demo :).

Venturia  
-----

Venturia is an Ultima-style game that John was working on since at least 1993 (when I first met him). I first saw Venturia only a few months before his passing, about 3-4 years into development. The long term scale of this project was simply due to "real-world" concerns which got in the way of his programming. However, despite having little time to work on this game, there is a level of sophistication in Venturia that could easily make one believe it is a finished product.

Venturia documentary (brief)  
--

Please note that "venturia-intro" is a standalone introduction file. It will not chain "venturia\_snap", which is the boot file for Venturia. Load and run "venturia\_snap" to start the game.

The documentation on Venturia, following the (C)opyright disclaimer, was originally provided by John via email. As far as I know, this is the only documentation for the program that is available. It must be stressed that John never finished Venturia and therefore options illustrated may or may not work as intended.

Remember, Venturia is (C)opyright 1993-1997 John Kaiser (AKA Waveform). It is NOT in the public domain. The following stipulations concerning distribution apply (from the estate of J. Kaiser) :

- A) Venturia may only be copied and distributed in its entirety, unchanged. Under NO conditions shall it be modified or incorporated into other works.
- B) Venturia may only be copied and distributed freely, without charge. Under NO conditions shall it be distributed for the purposes of sale NOR shall it be distributed on any media: electronic, magnetic, print, or otherwise upon which receipt of said media involves either a monetary fee, credit charge, handling and shipping charge, or participation in a barter system.

--

[...Excerpt begins...]

Hey Xman,

Can't find the great big drawn out doc file I had originally made for this but here are some keys to quickly get you started with checking out that preview:

Movement Keys: (ala Ultima or Questron)

@  
: ;  
/

## Misc Keys:

F7 will abort/exit/end virtually any action from inside any window  
SPACE usually toggles between windows, if there are more than one

- C - Open Spell Book  
SPACE flips between "scribed scrolls" and the contents of your bag of reagents
  - I - Open Inventory
    - E - Equip Toggle
    - S - Scribe a scroll to your spell book
    - B - Move reagents to your reagents bag
    - D - Drop Item (permanent drop)
  - L - Bring Up Look Targetting  
Use the movement keys to place the target on the object/icon you wish to look at... space/enter to examine it, F7 to abort.
  - S - Open Statistics Windows  
space toggles the attributes display and the shards recovered display
  - T - Time/Date  
something to look at. =)
- F1 - Brings up Game Utilities Window.  
Only a few of the utilities even show up on this list, and currently only one is even active. You can utilize the key repeat toggle function from here... the load and save game functions are disabled for the time being.

Well, that should be enough for you to get a good look at what is sort of a rough draft for how some of the game play works.

One final note... Unix mangled the filenames of the "?posi.xx" files. The first character should be a "<-" (cbm left arrow)... but then again, since the load and save game functions should be disabled, I guess it doesn't make much difference. =) Hahahaha. =)

[...Excerpt ends...]
