

IMAGE REFLECTIONS

News and Events:

Well we really wanted to make this a 'full blown' issue of the IMAGE REFLECTIONS but just could not seem to find the time, nor the manpower to get it together, so here I am, stuck with the job of trying to get some information together to make it worthwhile to send and for you to read. We really do have some things we'd like to make you aware of and it is not really all that much of a chore, just takes a bit of time.

IMAGE BASHE '89

Of immediate importance is the upcoming IMAGE BASHE '89. We have planned it to coincide with a local Utah event so there will be parades, rodeos, carnivals, fireworks and other types of things for people to do, along with meeting and enjoying the company of US, the company..heh heh...

The event is planned for the weekend of July 22-24 in the Spanish Fork, Salem, Payson area. I'm sure most of you are familiar with those names, you have seen them on your long distance phone bills enough. ;) Sorry about that. Actually we would like to know if any of you plan to attend and if you need any kind of hotel or motel accommodations. We also need to know if anyone plans to fly in to Salt Lake so we can make provisions to have you left at the airport, no sense spoiling the trip by having you PICKED UP is there?

We really hope that some of you can make it. Don showed his aptitude for cooking last year and we hope to put him to the test again this year plus he has promised to provide us with LIVE entertainment. Maybe someone can prevail upon him to tell what his SECRET night club act consists of, and MAYBE someone can prevail upon him to do it for us...

Version 1.1

I know you are all anxious to know what is happening with 1.1. As most of you know, it is simply impossible to test on every possible configuration. We beta tested v1.1 very carefully before it was released and we felt we had a good product. When we released it we found that there were some serious problems with it. We tried to fix it with 'patches' but soon found that was not the solution either. We ultimately made the decision to suspend shipments until we could find and fix the problem. We sent it back to the beta testers and we gave the test files to some of the sysops that were having the most problems with it. We are happy to report that the tests are going well and we feel that we will be able to resume shipments in the near future.

We have, in the interim, made some minor enhancements to the enhancements. So we will probably be issuing a new disk to everyone that has purchased the 1.1. DO NOT CALL US. We

have a list of all serial numbers and know who has the 1.1 (the F serial numbers, remember?). We will also post WIDELY when we start accepting new orders for it. Watch your nearest NISSA board as we will be relying heavily on the NISSA boards to help us get the word out.

But WHAT new features you ask? Glad you did, cuz you are gonna LOVE it. Ray (PROFESSOR) has added ANSI support so we will now be able to support ANSI color on our boards. What's more, it has been implemented in the term program as well so that you can now call an IBM or other ANSI board and see the same things they see. A few more goodies have been added, like a true 'move' and 'copy' command in the editor and the keyboard color/reverse control codes show up when editing a line so you can see where the codes are and what needs editing. There are also a couple of new print modes and the print modes are now definable, a print mode editor may be provided in the future to allow sysops to define some custom print modes.

GRAFIX 2

We have also released a second graphic disk recently. This one contains some new and exciting movies and one whole side of c/g. screens, many of which can be used on your boards in various places. The price remains \$10.00. Also included on the disk is a great file reader by Little John, created especially for the disk it will allow you to

view any file off line, including movie files and c/g screens. Also handy for reviewing text files, etc., and it supports the same commands as the board, the pause and space bar abort.

Coming Attractions

We never like to talk about what we are doing and working on since it usually brings a lot of questions about 'when will it be ready' but we are going to go out on a limb and let you know a couple of the things that are under development. Understand that we WILL NOT ANNOUNCE, nor will we make any statements about WHEN these will be available. The ONLY information that you will get will be what we say here. That said, we will say that we are working on the "PROGRAMMER'S REFERENCE GUIDE" for IMAGE. It is being written by Don Gladden, the author of IMAGE and the only one capable of writing the programmers manual. Ray Kelm will be adding the ML portions. We hope to have a very complete manual with references to all the major routines in the BASIC and ML portions of the program with memory maps, etc. Our second project is NETWORKING. We have probably progressed much further along on this than many people think but it is still quite some time before it will be ready for release. We are planning to have the Network use the facilities of STARLINK (Similar to PC-pursuit but, in our opinion, cheaper and better. It allows 2400 baud and Punter support)

Not everyone is familiar with what a NETWORK even is. Simply put, we will have the ability to send mail or files from one board to another through the network. There will be a fee attached to using it, since someone has to pay the long distance charges incurred. Those are usually passed along to the user. Several other BBS systems have a network capability to some degree or other. "Color 64" has the ability to transmit mail, Punter boards have email and a shared message base. Probably the most elaborate is the FidoNet on the IBM systems with virtually hundreds of nodes across the country. We don't anticipate being THAT large but we do plan to have the ability to send email and files from one place to another and we also plan to include a shared message base so that people can post/respond to the net messages on each of net boards, it will be sysop definable, of course. We have not worked out the cost, nor the administration of the network yet so PLEASE do not ask about it. We will make an announcement when it is ready.

Oh, one more thing...the l.l files are equipped for the network. That is what the 'nm.list' is in your '+.lo+' and that is WHY the systems will be reserved (or are in some cases) from 3AM to 4AM. The reservation will be (is) for network traffic.

Moving On

We are now starting on a fourth pfile disk. We'd like

some ideas on WHAT you'd like to see on it. We have felt, for a long time now, that there was a need for a disk of specific sysop utilities. What do you think? Would you like some utility programs? If so, what would you like? Is there any specific files you need, or is there anything you would like added to the main IMAGE program. How about any particular 'mod' you would like? We really need input from all of you to help make the system grow and to give you the kinds of things that you want. Give us a call and let us know.

Wrapping Up

And finally, there is some news that we felt you should know about the company. We are forming a corporation that we hope will better serve the interests of all concerned. It will have regular officers and a board of directors and clearly defined functions and responsibilities. We hope that in this way we can better meet your needs. Most of the changes are internal. We hope they will show up in renewed vigor and a more efficient organization.

We are also looking for any one that would care to volunteer to publish a newsletter...bi-monthly, quarterly or whatever, just regularly.

We thank you all for your continued support.
