have the latest games, the latest add-ons, the newest business software for all the Commodore computers: there'll be Commodore itself, of course, with its new machines (and some good 64 stuff too): and there'll be sideshows, like the razzmatarz from Radio Luxembourg. As a preview and taster, here's a run-down on the goodies you can see at the Pith International Commodors Show...

Aggggrah!!! The errors of your ways

The Vic and 64 are quick to highlight your mistakes by flashing a marriable host or error messages on to the screen - but that doesn't what the computer might tell you, in the shape of an alphabetical list of error es: what they mean ... and what you might be able to do about them.

Screen scene for Vic

Butterfield on 64 video - part 6

This time. Iim plunges into more advanced and tec split acreens on the 64. Has to be seen to be believed, and makes full use of what he's already taught us in previous issues. Can you find a better intro to the 66's wave with displays? No, you can't.

Machine-code packages for Vic and

64: three head-to-head reviews

towards machine-code programming - run faster, use more of the computer's choose from David Bolton indicates what you should be looking for from such products and assembles three of them for inspection: User-friendly 6502 for Vic.

Word processing round-up Chris Durham takes a well-earned breather from his Herculean

task of reviewing WP packages for the 64 - he's done a dozen and there's more to follow. But it's time for a mid-term report on the state of play: is professional word processing really feasible on the 64? What should was look for in a word processor - and what will you have to pay? How do the packages he's reviewed already compare with each other?

Deals for Readers returns - bigger

At last — the wired CBM

Commodore's sneak announcement this month is a modem for the 64. That opens the world – literally – to every hacker with enough wit to be able to plug in a cartridge and dial up a sequence of 21

Karl Dallas has been talking to CBM's Compuserve computer in Ohio, USA – and running up enormous phone bills ever since Commodore lent him the first of them. Here is his report.

After all the talk in recent years about the wired society. Commodore's entry into the new age was almost an anti-climax – and a complete contrast to the razzamataz of their announcements at Hanover in and

In fact, if you weren't already certainly have missed it: the only word to come out from Slough announcement to Micronet 800 subscribers (on page 800812292 if you'd like to read it for yourself) that the 64 modern was at last available. He also said that "several" of the modems (I understand the exact figure is about 3.000) were in stock and ready to go to everyone prepared to fork out just under \$100 for them, mail order only (In case you think Commodore is getting a touch of the Clive

to mail right now!)
This is really good news to me especially, because for over a year I've been trying with no success whatsoever and increasing frustration to link up my computer to the rest of the world. In fact I even went to the extent of getting myself a Spectrum because I'd beaut the solved on Uncle Clive's icky-keved darline.

Sinclairs, let me reiterate that the

modems do exist and are ready

For most people, wiring up to the world means one thing: joining British Telecom's Prestel network by way of Micronet 800. Prestel is just a huge

mainframes - crammed with all sorts of fax and info that people might want to know, from the top of the Charts to the current price of wool futures in Sydney, Australia.

But really it's one of those great ideas that's still waiting to

take off, a solution waiting for a problem to deal with -regarded by people with 'proper' databases as something of a toyfascinating to play with, maybe, but (unless you happen to be one of the travel agents who seem to find it very useful to check things like flying times and the latest cheap tours) of no practical use.

cheap tours) of no practical use. When it flut came out. Preside When it flut came out. Preside restal firms, and you had to communicate with it by a numeric keepad – which was in the for years ochoices, but dishort offer much chance of real. Software briefing

Commodore's recent Software Briefing may have sounded like high-powered affair - but it wasnt. It merely gave already zap-hardened journalists the chance to try out Commodore's latest soon-to-be-launched software offerings.

That amounted to a whole range of educational and games software (it's getting difficult these days to distinguish between the two) – mainly for the 64. As olitary not-plugged-in Vic lurked at the far end of the table. We were assured that net games are being launched for it So why werent they being displayed? Well, someone had forgotten to hring the required

Fishing for games

For arcade-action enthusiasts. Commodore was displaying a range of five games for the 64 Mayhem, Pandora's Box, Punc Little Icarus and Humphrey. Names sound familiar? Quite right, they're all from the Mr.

own software; it regularly engages in what Commodore UK's software boas Gail Wellington calls "a cast-the-net operation". Having cast it, she hauled in Mr Micro - for two reasons: "they have good software, and they were willing to be marketed. Mr Micro is one of the cast of the cas

With Commodore's mighty marketing muscle behind it, Mr Micro is already working on ne material exclusively for Commodore - and probably

that securds life good value. Unlife some disk-based to the disk's increased capacity, but many of them look quite good and original Like Panders' look, for example, which displays a nice 30 effect – you try to sop various natises leaving the box. In Little learns you fly the winger youth through mythical Creece is find his did- often fit you have the size, though Pankly to based with successions of the size of

And it looks as though the trend for acquiring games from already-established software houses will continue. Apart from Mr Micro, Commodore is dealing with Starcade to market its Savage Prod game for the 64 under the Commodore unbreils, and there's a link with Widget Software too, though no details are to be hed yet.

Work and play

Commodore has also acquired so considered part of the considered par

On cassette there's Let's Count - four counting programs for tiny tots; Bide and Seek - a visual memory game (two cassettes for \$9.96); Face Maker - lets you make a multitude of ugly funny faces; and Words, Words, Words, words words to build up a picture from a range of ten scenes (two

from a range of ten scenes (two cassettes for £9.99). Last but not least is Number Painter, a Manic Miner-type maths game with pretty impressive graphics. That's bein produced in cartridge form.

costing £9.99. And Gail Wellington's pretty pleased abovit. "It's got the playability necessary for education games".

Finally, to the Vic. That gets a program called Music Writer (casseet, ES-99; allows you to compose a tune and play it back in various different forms. The Vic also gets a range of arcadetype games on cassette, for £4.95 each; and there's a four-pack of

Speaking out

So what's Commodore got under development? Well, it's introducing more software to run with its Magic Voice speech synthesiser for the 64. The latest project is the Talking Books' series: titles include Magic Garden and Magic Toolboy

Carden and seager rootsook.

Each package contains five stories for children to read and write. Sections of text are illustrated on the screen and read by the voice module. There's a dictionary too, so children can get an explanation of any words they don't understand – no prices or

You need Magic Voice to make the Talling Books work, but the module is optional for the B.J. the Bear series of basic reading and writing programs. Those are being developed by the Educational Psychology department at Birmingham University - real educationalists. Again, no real product or prices yet.

So it looks as though Commodore's commitment to software is continuing according to plan – not just to games but to more practical and useful software. Moreover, it's not just announcing availability but showing us the real stuff – unusual for Commodore.

Robotic chores

BP Oil organised its first Buildarobot Competition last year. That generated such a lot of entries – over 1,000 of them, especially from schools – that it's

unning the contest again.

But this year the sophistication
evel is going up

Last year, BP asked you to build a robot that would retrieve a cube. This time you're set the more ambitious task of constructing either "a freestyle robot to perform a useful domestic task", or go for the set challange of building "a mobile robot to serve a drink to each of two people seated in a room" (mine's a double).

National Finals aren't until October 1985. But you must be aged under 19 on 31 August of that year to be eligible. Prizes? Those haven't been fixed yet but the total hand-out will be more

than £3,000. Last year, winners got £500 each with lesser sums for runners-up (and that figure should increase this year). Of course, money isn't everything; you could get yourself on the telly (last year's winning robot chased Selena Scott round the TV-AM studio – no extra prizes

According to Rrendan Lomax, BF9 FP Rm an, "all sorts of computers were used but quite a few entries were based on the Commodore 64". He emphasises that the competition is really designed for schools; so if yours hasn't receives BF9 information pack, it can acquire one from Mm Francis Parker at BP Oil Ltd. BF House, Victoria Street, London SWIE SNI.

WE PLEAD NOT GUILTY

Dear Voice of the Industry: COMPUTER GAMES PIRACY

This letter is being sent to all specialist microcomputer magazines and concerns the cancer that is eating the very heart of our industry.

heart of our industry.
Computer games software is
the dynamic success story of the
current economic recession and
is an area where, for a change,
Briain has a tangible lead over
competing countries. The games
software industry is part of the
emerging leisture technology
midustry and our lead in games
will be reflected in other areas of
soft the preferred in other areas of
soft before the other areas of
soft before the other areas of
soft before the other areas of
t

The boom in games software has created jobs, not only directly but in printing, duplicating, advertising and in the magazine industry. As leisure technology progresses it could become a major source of employment.

militor sources of employments. All this is binary proparationed by All this is binary proparationed by of the public who are copyring games instead of boying them, this is their. We are not talking about solated intances, we are talking about solated intances, we are talking about solated intances, and their evening meetings and stealing as many as 2000 copies of ourcoestful individual titles are one go. Conservative estimates regard seven copies for each regard seven copies for such realistic overall picture of the marketphace.

This is risking the livelihoods of everyone in the industry, including the magazines. The games companies have far less to spend on advertsing space and if the epidemic continues will have less still. This is the reality of the situation.

The media is a powerful force yet in this instance is doing little or nothing to use this power. Some magazines even carry small advertisements for blatant copies, some magazines have actually carried editorial condoning the thieves. They are cutting off their nose to spite their face.

The time has come for all computer magazines to follow a concerned campaign to stop piracy. Editorial must campaign for law changes creating harder penalties. The copying clubs must be exposed. Advertising executives must filter out the pirates adverts. Piracy must become unpropular.

It is no good expecting the software companies to solve the problem, they have not the organisation or power - it is the

media that has. Any magazine that does not act is not facing up to reality.

David Henry Lawson, chairman, Mark Lawrence Butler, managing director, Ian Hetherington, financial director, Bruce Everiss, operations director, Imagine Software Lid, Imagine Bouse, 5 Sir Thomas Street, Liverpool, Merseyxide L1 6BW.

In your assessment of the software market you will have noted the general concern over the levels illicit copying of programs is believed to have reached.

The Guild of Software Houses is active in seeking measures to restrict this threat.

In this respect magazines can assist by adopting a responsible attitude in the acceptance of advertisements which may be considered against the best interests of the industry.

The commercial success of any publication is, of course, the criterion and revenue from this source is a fundamental consideration as is the continuation of creative products which provide a significant information base for journalists and their medium.

The displays generating most consternation appear to be concentrated in the classified sec-

It is noe time for the press to be seen to act in a creditable manner and support this campaign to eradicate piracy. Response on this matter will be measured in the form of a survey conducted by G.O.S.H. during

1984. Yours faithfull

Rod Cousens, Vice Chairman, Guild of Software Houses

COMMODORE USER SAYS:

So software piracy is the fault of the micro media, is it?

Of course, if illegal copying on the scale alleged by Imagine's tetter is going on - and we wait the prosecutions of those 'user groups' (their quotes) who have employed assembly-line techniques to duplicate as many as 2000 copies of successful titles in breach of copyright law - is it to be condemnsed and we do condemnsed and we do condemn it, as regular readers will

demin. I, as regular readers will.
On the other hand, the industry's obsessive concern with 'protection' puts the honest user wishing to create security back-up copies, or a suite of much-used programs or a suite of much-used programs of the control of the cont

particularly of business and unifies software. The minimum services the motivations of most of those who resort to "piracy", Rarely is it the sort of big business that has bedevilled the video trade. It more like the sinta-tion in the music business, where people resent to copying abusine people resent to copying abusiness of the people resent to copying abusiness of the people resent to copying abusiness of the people resent to a copying abusiness of the people research to the proper supposed to the people research to the

Similarly, there is so much duff computer software about - stuff that won't LOAD or RUN, and stuff that's boring or doesn't deliver what is promised on the box. It is hard to condemn those who want to share their discoveries with their micro-mates.

Nevertheless, if the Imagine directors want to condemn piracy, then OK: computer piracy is wrong, immoral, and ought to be illegal, if it isn't already (we need a

test case to prove whether the copyright laws actually apply).

We are also against sin (some sins, anyway); but we don't think

pious declarations will abolish it.
And we are always against manufacturers distributing software that has been inadequately debugged, duplicated without the necessary quality-control to eliminate the non-RUMners, and presented in covers whose art bears scant relation to the image on the screen when it's finally persuaded to per-

As a magazine, we like to think we our doing our part to weed on the duff programs. We do refuse ads that we know are for copying devices and programs, though these are readily available elsewhere, and anyway we doubt the they are the real cause of the

trouble.

We are also opposed the so-called 'cures' like the tape levyn-and similar vanishing sometimes and similar vanishing sometimes. The sometimes are generally sometimes the life they are supposed to handle, and they extend Covernment interference into areas of life and recreation where the smooth sometimes and the money-grabbing bureaucrat have no business intrudies.

crat have no business intruding. We don't think anyone owes us or the software companies a biving. And we regard their advertising with us, not as charify from a grateful industry, but as a hard-headed commercial acknowledgement of the editorial policy which made us the best-selling user-specific micro mag within a month of our going on to the bookstalls.

FRATIS were high seas relations are as a seried read withtended and the season of the Cartesian of the season of the Cartesian of the season of the seas

ate for Valhalla?

Legend's Valhalla was launched last October on the Spectrum; it's grabbed £2 million in sales since then and has won two games awards. But it's only now available on the Commodore 64.

That's seven months after its initial launch - and a sackful of assorted computer games have grown old and mouldy since then. Why has the conversion taken so long? And is Valhalla on the 64 a legendary dead duck?

The 64 poses a lot of technical problems", explains John Peel, Valhalla to the 64 was more difficult than actually writing it for the Spectrum. But that conversion is a dramatic improvement on the original. Everything happens more quickly, making the game more challenging."

Peel has no doubts that, despite Valhalla's comparative longevity, it will sell on the 64: "We expect it to reach the top of the Commodore charts immediately on release - we've already got over £250,000 of advance ordere Valhalla is unique; it's not an adventure game but an interactive comp movie". We'll be reviewing it soon - popcorn in hand.

Cut-price games

The computer games software industry has already publicly aired its feelings about illegal tape copying, gloomily predicting the industry's demis

if the pirates aren't scuppered. But more intimations of disaster Meakin, head of National Micro Centres (sounds very official, but it's a retail shop chain). According to him, the industry may soon be "cutting its own throat", thanks to the cut-price operation of Mastertronic, a new games software company

Mastertronic has what is called "a revolutionary pricing policy": that means you'll pay just £1.99 for a game-tape - three for the price of one, as it were Is Mastertronic trying to prove something? "Mastertronic will

endeavour to prove what the market has long believed - that software currently available is generally overpriced." So asserts Martin Alper, one of Mastertronic's directors Over to Meakin: "This might

sound fine for the computer user. But many of the software houses are working on very tight margins already, and a price cutting war could well bankrupt the more sulperable one." Then there's the question of

remineration for software writers: if the royalties are low This means that quality - and standards - will slide rapidly". Of course Mastertronic doesn't

see it that way; it's offering those small software-writing conthe chance to sell in large volumes, with Mastertronic using its distribution and marketing skills to sell to supermarket chains, garages, newsagents, hi-fi dealers and the like - places you wouldn't expect to find games The intention is to encourage what it calls "impulse buying" But you'll also find the Mastertronic range in places like Boots, W.H. Smith and the retailers supplied by the big distribution chain Websters Mastertronic took a stand at

the recent Home Computer Show in Manchester and reportedly generated a great deal of interest albeit with few sales. People weren't sure what to make of its bargain-basement games, it seems. But that was a few weeks aco. Martin Alner now reports that in its first three weeks Mastertronic sold 165,000 games nationally: and that one dealer clocked up sales of 400 in two weeks - somewhat quicker than selling hot cakes.

More than twenty "top quality games" titles are already available, of which eleven are for the 64 and four for the Vic. And Mastertronic is aiming for 50 titles by the Autumn, with plans for educational and business software. We've got a bunch for review and will be reporting

Obviously the games sell because they're cheap but Alper doesn't see them as a substitute to top-quality and more expensive games; there's a strong place for those too. "The industry will settle down into a two-tier system. Our games don't take long to develop and will appeal to a lower age group won't be very high - so you buy another one. Looks as though the age of disposable games has well and truly arrived.

Plua

According to B&R Electrical Products, a lot of sensitive electronic equipment is at risk from sudden spikes or surges on the mains - office computers and word processors, electronic typewriters, home computers. videos, cash remisters, history equipment, instruments and controllers, and so on.

Mains-borne interference like that can be generated by switches, flourescent lights motorised equipment, air conditioning, vacuum cleaners. washing machines, printers These everyday surges can be in excess of 3000V: thunderstorms can easily generate over 10.000V on the mains

You won't then be too amazed to learn that "for such sensitive and valuable equipment B&R recommends fitting its new PowerCleaner surge supressor existing 13 Amp mains plug, yet it can provide a dramatic reduction of up to 99% in equipment damage or disruption

Most modern electronic gear is designed to withstand surges to 600 or 700V. Anything greater than this can actually cause permanent damage, though a one-time loss of data or program is more likely. The PowerCleaner plug effectively limits surges to 625V, a level at which B&R says "tests show a 99 per cent reduction in equipment damage from spurious surges" Priced not unreasonably at

£8.65 plus VAT, PowerCleaner is available from B&R stockists further info on 0279 34561.

SHORTS

Button up: Standard Commodo joysticks don't have a pushbutton on top of the stick, which happens to be an obvious and very handy place for a fire button because you can hit it with your thumb. But for £2.95. Computer Supplies will send you a Top Fire Button Kit with which you can quite easily add your own. We've tried it: the button itself is a bit small, but it works and it does improve the loystick If you don't fancy putting it in yourself, send your joystick with £4.45 to Computer Supplies at 146 Church Road, Boston, Lines PE21 OIX. Barrie Hill at Computer Supplies also told us he can handle just about any repair to inveticke

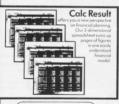

Now the Commodore 64 means business

The Game's over. Wouldn't you like to increase the applications potential of your Commodore 647 Transform it from a fun family computer into a truly professional tool? Nov — thonks to Mandix, the world's largest creator of £Commodore software — you can give a powerful new dimension to your 64°s performance. We have plotonered one program called 64.C RESULT have program called 64.C RESULT have potential of your Commodore.

other money managers exploit it to keep track of complex client accounts. Builders, Garage Owners. Retailers of all sizes, and descriptions now use the spread sheet formula for instant feedback and analysis of trading results. In a world where ease of access and speed of assessment are essential, CALC RESULT gives everyone the power to harness the untapped potential of their Commodore.

CALC RESULT is versatile... use it to calculate loan and mortgage payments, forecast budgets, balance cash flow, monitor stocks and shares, plan personal and corporate taxation, check expenses, log and analyse all kinds of bills.

CALC RESULT instantly translates figures into multi-coloured bar charts. It has a built-in 'HELP' function and is absolutely accident proof.

£49.95 (inc.VAT)

Calc Result Easy

(64 columns x 254 rows). Bullt-in graphics. Formula protection, flexible print-out, colour conditional functions and mathematical functions Delivered on plug-in cartridge. Data storage on cassette or disk.

Easy plus 32 pages (Threedimensional viewing). Page add, window, split-screen (up

to four pages on the screen at the same time), and help functions
Delivered on plug-in cartridge plus disk. Requires dask drive

BASIC Adventures in Space

BOOK & TAPE COURSE

An exciting course for all children from 7 to 77. Learn BASIC while enjoying this most exciting space adventure. Master the computer to escape from the Alien Planet.

The course contains four computeraided learning programs to teach the major BASIC commands. Available for the CBM 64, VIC 20 (and BBC, Electron and Spectrum!)

Beginners BASIC course for the **CBM 64**

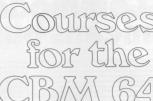

£10.50 BOOK & TAPE COURSE

A complete beginner's course for the CRM 64 It assumes no prior knowledge of BASIC and teaches by means of projects. The enclosed software contains a character generator, sprite generator, synthesiser and all six games developed in the text. Included is also Honey. Aid 1 which adds 28 NEW commands to CRM 64 BASIC

Courses are also available for BBC, ORIC, ELECTRON, APPLE, DRAGON, SPECTRUM, LYNX.

HONEYFOLD SOFTWARE LTD

London EN5 1ED Tel: 01-441-4130

Beginners Assembly Language for the CBM 64 or VIC 20

BOOK & TAPE COURSE

A complete beginner's course: contains a full two-pass assembler featuring:

- · Labels Memory labels
- Macros · LOAD/SAVE
- Insert/Delete Hardcopy Also Binary/BCD/Hexadecimal tutor to

explain the maths used in machine-code programming. Covers whole 6502/6510 instruction set.

Courses are available from: W.H. Smiths, BOOTS, SPECTRUM stores and all good computer shops and many bookshops.

Four new machines, and that's official!

Excitement among the estimated 40,000 keen punters expected to attend the Fifth International Commodore Show at the Novotel, Hammersmith, London from June 7 to 9 will become even greater with the now official news that the company will be showing no fewer than four out of the six new machines premiered in Hanover in April, (see last issue) and that these are all definitely planned for release within the

STIRLING RETURNS TO LE MANS

Veteran racing driver Stirling Moss will return to the Le Mans circuit, in spirit at least, when he takes on all comers in the popular game at the Games Arcade at the Commodors Story

ommodore Show.

He will also be introducing his son, Elliott, to computer autom character R.I. the Bear in the new range of

speaking "Magic Voice" software.

Another visiting celebrity will be Chris Biggins, from ITV's "Surprise Surprise" and he'll have some surprises for visitors up his sleeve.

More properly described as information retrieval systems, databases are now attracting the attention of the small user, with their facility for storing, extracting and manipulating all kinds of data, from malling lists

to records and video catalogues. Perhaps the biggest news bere is from Precision, who will be first off the mark with software for the forthcoming 18-bit version of their already popular SUPERASE, increasing the maximum record size from 1106 to 2 Kb in length, and the total number of screen formats in a database up to be 16-bit sometimes of the soft summer of the soft sum

extended Basic interpreter.

SUPEROFFICE consists of an integrated program including SUPERBASE and SUPERSCRIPT.

I, running on the 8096, a truly superb package at a professional price (2799.25).

Meanwhile, a number of £15

applications packages have been produced to run under SUPERBASE 64, including some for the home (birthdays, diet plans, domestic accounts), and for business. Superbase has sold over 10,000 copies in its 64

variant, and is now selling at the rate of 3000 a month.

The cartridge-based MAGPIE.

from AUDIOGENIC, £99.95 is a very powerful program, entirely menu-driven, with maximum record-size 3050 characters with \$2 fields - 26 alpha and 26 numeric - plus calculator screen, menu-driven "procedure" (program) editing, and help screens on disk.

The more advanced

The more advanced programmer, interested in developing specialised database applications, will find virtually every facility needed in the Calco MASTER program, a suite of file creation modules, on a disk alongside disk utilities giving the 64 the equivalent of Basic 4. A pression is also available for the 8000 and 700 series.

JCL Software have a 4K business ROM for the 8096 whose enhancements to Basic include keyboard input, screen editing, and file read/write functions.

For the less ambitious, EASY FILE £80 from Commodore has a maximum record size of 906 characters over two screens, maximum field-size 40 characters, three levels of password protection, ascending/ descending sort, and links with Easy Script.

SPREADSHEETS

Dataview Wordcraft Ltd: B3S Saxon Computing A1 Supersoft A43 Viza Software A135/A136

Surely everyone must have a spreadsheet by now, and is probably spending so much time checking out the "what if?" option that the business is fast collapsing around their ears, but still the new ones come.

stul the new onest come. Supersoft are promising us the latest version of the program that started it all, VISICALCS, while Viza's VIZASTAR is at last (it says here) up and numing—though that's really a bit of a database hybrid with business crabites thrown in.

Supersoft will also be showing BUSICALC for the Pet and Vic and BUSICALC 2 and the 3D (linked sheets) BUSICALC 3, both for the 64.

Dataview will show their INSTA CALC/GRAPH integrated spreadsheet and business graphics programs, also available separately. Although it could be described

as either a spreadsheet, a database, or even a business graphics generator, FIGARO from Saxon Computing is actually a bit of all three, allowing data to be maintained and displayed in a wide range of graphic styles.

WORD PROCESSING

Dataview Wordcraft Ltd B35
Handic Software Ltd D13
Impex Designs (UK) Ltd A65
JCL Software Ltd C27
Precision H69/A146
Supersoft A43

The two big word-processing stories at the show will be Handic's launch of WORD RESULT, the powerful companie to Calc Result designed for the 700, with split screen window to access word processing and spreadsheet concurrently, and at the other end of the market the modestly-priced disk version of WORDCRAFT 64 from the originators of the program in its various manifestations, Dataview (not to be confused with the cartridge-based Wordcraft-40 distributed by Audiogenic).

Consider our s professional

If you ever have to bring work home from the office you can now tackle it in a fraction of the time, thanks to our range of software.

With these inexpensive new programs you can turn a Commodore 64 personal computer into a fully-fledged business tool to improve the smooth operation of your calculations, filing and ordering or information storage.

All the programs are easy to learn and use, and all cost less than £50.

There's no more cost effective way to turn your home computer to practical

Practicalc 64. The complete spreadsheet for Commodore 64.

With this program your cashflow will do just that.

Practicalc 64 accepts both numerical and alphabetical entries and allows you to work out sales forecasts, long-term budgets, sales models or long term cash plans.

All in a fraction of the time they normally take. Practicale 64 has 2000 cells, more than 20 mathematical functions, (including logarithms and roots), can insert or delete rows or columns, can 'SORT' information alpha-numerically and has a 'SEEK' function to search for specific information.

It can even display the information in graph form to allow a quick visual appraisal of the situation. Disc £44.50 (Tape £59.95).

> Over 20 mathematical functions. Column width up to 58 characters 2000 cells. Graph function.

Practifile 64. The database for Commodore 64.

consuming storage of files, client or patient information or names and addresses.

And it means you'll no longer have to spend

And it means you'll no longer have to spend minutes or hours searching through piles of paper for a specific piece of information.

Each file on the program is able to handle 5,800 record entries, and Practifile can sort the files it contains by number or letter in less than a second.

The system is so flexible that you can add, subtract, multiply or divide within individual files, while its use with a word-processing system means that you

> Sorts files by number or letter in less than one second. Fully compatible with Practicale 64.

oftware from a point of view.

While Practifile means instant access to mailing

At just £44.50 you won't find a more versatile, flexible and professionally useful data-base.

Inventory 64. The quick, reliable inventory system. With its capacity of 650 items, Inventory 64 is

ideal for the average small business, and means a vast improvement in the efficiency of good stock control. All you have to do is to enter each item, followed by the information which the program will prompt. That means things like part number, description,

Handles up to

location, stock, year-to-date sales. re-order date, minimum quantity. vendor, list price and other important facts.

From this information your personal computer, with the help of Inventory 64, will be able to collate and assess the major points of an efficient system and be able instantaneous view of current stock situations

And ensure that stock control problems really are a thing of the past. Pretty good value at just £29.95. You'll find our superb range of

Commodore 64 software for professional and business use in all good computer stores including selected branches of Boots, W. H. Smith. Menzies and Laskys.

If you'd like more information about our software or require any technical help fill in the coupon or phone us on 0473 462721.

How to get there

Hammersmith is in West London, of course, which makes the place pretty

convenient from just about all directions except East Anglia and North East London. Driving there isn't too bad; the public transport services are excellent.

By car

Getting to the Cunard International Hotel can appear daunting and is the subject of numerous apocryphal stories about haggard drivers circulating feverishly around the Broadway looking for a way to it. But in reality it's not

The main hotel entrance is in Shortlands, and that's a two-way road connecting Talgarth Road

Coming from Earls Court and Central London you aim for the A4 and follow signs to Heathrow, Bristol etc until you reach the Hammersmith flyover ... otherwise the next possible exit is a couple of miles further on. So get into the left-hand lane and take the

Hammersmith; and at the next opportunity, turn right and make a U turn under the flyover. That puts you briefly on Talgarth Road going the other way; Shortlands

Coming from Kensington and the West End, drive through High Street Ken and past Olympia. You're then on Hammersmith Road without trying: Shortlands is the last turning on the left before you reach the ugly kingsize

Eroadway.

Coming from the West you stick with the A4 until you're offered the Hammersmith and Shepherd's Bush ext just before the flyover. Again, don't miss it it stricky to find your way back on the Broadway, or right round the roundabout past the tube stations, and don't aim for Kensington – it might look the cohvious route from the map, but

from that direction. Instead take

the next exit signposted 'Central London'. This puts you on to Talgarth Road and Shortlands is the first left.

Coming from Shepherd's Bush and the North you aim for the Broadway, avoid the temptation of the Kensington direction, and follow the Central London sign again with Shortlands the first

Car parking is in theory available at the Hotel itself—there's an NCP car park under it—but most of the space is likely to be taken by exhibitors and the Hotel's regular guests.

There are two other decentsized car parks locally; one is off Queen Caroline Street (get on to the Broadway and take the exit after the Odeon), the other is behind the new shopping precine called Kings Mall (take the King Street exit from the Broadway and follow the signs around to it it a about five minutes' walk from the beating.

Alternatively you might just b lucky and find a space in some side-street. Your best bet is probably in the maze of streets

By tube

This is the obvious way to come if you live near a Piccadilly, District or Metropolitan Line station. On the Piccadilly and District Lines you look for the Broadway exit from Hammersmit station, turn right past the Clarendon pub and search for the subway that gots you under the Broadway itself.

The Metropolitan Line exit is on the North side of the Broadway so turn left and brave the traffic at the foot of Shepherd's Bush Road and try for the island of office buildings which also

Hammersmith is served by

Leaving by cab

If you need a taxi, you'll probably find some at the hotel or will be able to flag one on the Broadway But there is also a cab rank on the corner of Shortlands and Hammersmith Road, and there's another at the junction of the Broadway and Hammersmith

OOPS!

When the Vic or 64 hits a problem, it puts a message on to the screen preceded by a question mark and followed by 'READY' with the cursor blinking on the line below.

Here's an alphabetical list of the error messages you might get, complete with possible explanations and what you can do about it. Where a line number is involved, that's given here as [n]: it indicates at which line in your program the error was detected, but note that this doesn't necessarily mean the error itself is actually in that line – it may have been caused by something else in the program.

Several of these messages are really obscure and definitely unlikely, some refer only to disk usage, and several involve concepts and commands that are outside the scope of an introductory look like this. But they're all here for the sake of completeness.

BAD DATA ERROR IN LINE [n]

The program was expecting numeric data and it got a character string. Correct the duff command(s); normally it's a READ or INPUT# statement followed by a numeric rather than a string variable (one with a \$ sign on it).

RAD SURSCRIPT ERROR IN LINE [n]

You're trying to reference an element in an array that's outside the dimensions you set up with a DIM statement. You'll have to correct the DIM so that the array is larger, or change the array element number so that it's within the

BREAK IN LINE [n]

Not exactly an error message, just an indication that the program has been stopped and what line it had reached. This is usually because you wanted it to stop (you inserted a STOP statement in it to see how it was doing so fax or you hit RUNSTOP to halt it) or because you accidentally leant on the RUNSTOP lew.

CAN'T CONTINUE ERROR IN LINE [n]

You've used a CONTinue command, but the program has been deleted or perhaps amended such that program execution cannot proceed. The most likely cause, however, is that the computer has previously picked up another error and you haven't corrected it... it won't let you CONTinue umil

that has been fixed. Your best option is probably to try restarting with RUN and see if that throws up an uncorrected error.

DEVICE NOT PRESENT

Probably means the device you're trying to get at (usually printer or disk, oc

Propany means the device your te trying to get at (assains) parameter of casionally cassette) isn't connected to the computer or the mains. That's easily remedied, of course.

Sometimes though you'll get this message for no apparent reason – on my

own set-up it sometimes appears when I'm trying to read a file from disk while the printer happens to be switched on. The solution that usually works is to switch off everything you can and try again; alternatively OPEN a channel to the device you want to address and then re-attempt it.

This message can also occur if the devices are powered up in the wrong order, especially if using two single 1541 drives. Experiment to overcome the

DIVISION BY ZERO ERROR IN LINE [n]

24 The computer won't allow you to divide by zero. You might have tried to do

that by mistyping something, but it's more likely to occur within a FOR... NEXT loop or as a result of filling an array with numbers that you then us in a division. The easiest solution is to put in a check for zero on any procedur that might just prochoos one in a division.

EXTRA IGNORED

Someone typed too much in response to an INPUT prompt. You may also have inadvertently included a comma in your input. (The comma is used to separate fields and must not be used as an input character.)

THE BLOCKDY FYICTS

The computer won't let you set up two files on disk with the same name, is it won't tell you that — unless you're trying the COPY command, in which cas you'll get this message. Give up and rename the file.

FILE NOT FOUND

You're trying to LOAD or VERIFY a file that the computer can't see on the up or disk. It's probably not there; but you may have mistyped the file name or

FILE NOT OPEN

You haven't used an OPEN command when the computer wants one fr --which is before a CMD, CLOSE, INPUT#, So OPEN a file and retry.

PH P OPPN

You used an OPEN command on a file that's already open. Either you do:
need to re-OPEN it, or you need a different logical file number in the OFE

mmand. If in doubt, CLOSE the file and OPEN it again.

You've asked the computer to do too much – you used an expression that is too many brackets or too many functions. Split up the expression somehor that's good policy anyhow, since it will make life easier for anyone (like you who has to read through and understand the program in the future.

ILLEGAL DIRECT

Most of the computer's commands can be used in immediate mode (ie ties are executed as soon as you his RETURN) or in programs (they are executed only when the program is RUN). But these are not valid in immediate mode: DATA

DEF FN GET GET# INPUT

INPUT#
If you really want to use these, you'll have to write a short program that incoporates what you want to do and RUN it.

ILLEGAL QUANTITY ERROR IN LINE [n]

You have a variable that is outside the computer's range. It usually happe when you're trying to POKE a value less than 0 or above 288. So don't.

LOAD ERROR IN LINE [n]

Something is wrong with an attempted LOAD from cassette – typically the file you're trying to LOAD has been scrambled somehow. You didn't leave the tape on top of the TV, did you?

Error messages and what they mean

There's not much you can do about this, except try again: and if it persists, % put it down to experience - and take more backup copies in future.

NEXT WITHOUT FOR ERROR IN LINE [n]

The computer has found a 'NEXT' statement in your program that is not associated with a preceding FOR. You might have missed out the FOR altogether, or a NEXT somewhere else in the program might have been tied to your FOR - that can happen if you aren't specific about which FOR variable you want executed NEXT. Check that your FORs and NEXTs pair off.

You've OPENed a tape file for output only and you're now trying to read from r. Check your READ# command, but the fault is more likely to be in an OPEN if the third parameter of the OPEN statement isn't '0' or omitted altogether. was have opened a write-only file.

NOT OUTPUT FILE

A tape file has been OPENed for input only and you're now trying to write to it. Again, check your READ# command; but as above the fault is more likely to be an OPEN - if the third parameter of the OPEN statement isn't 'I' or 2 you have opened a read-only file.

OUT OF DATA ERROR IN LINE [n]

The computer has run out of DATA items to READ - there must be enough entries in your DATA lines to fill all the variables in READ statements. The simplest solution is to start counting and make sure there is sufficient DATA. You might also get the problem if you want to read the same DATA more than once - to repeat it in different POKE locations or different arrays, say. Then you need a RESTORE before attempting each READ.

OUT OF MEMORY ERROR

You may have run out of memory because your program is too big and/or it's creating too many new values for variables. Buy more memory, simplify the program, or stop it producing so many new values for the computer to store. You might also get this error even when PRINT FRE(0) shows you have a lot of memory left. In this case what's probably happening is that the stack is filling up with too many nested GOSUBS or FOR ... NEXT loops (the stack is an aide memoire for the computer that indicates where in the program it has to jump to and when). The solution? Simplify the program.

This can also occur when loading a program from tape. If the tape header is corrupt then it can overwrite part of the Operating System area and cause a spurious error message. Always turn off the computer before attempting a re-load if this occurs!

You have a calculation that's produced a number too big for the computer (the largest number the Vic or 64 can handle is 1.70141884 x 10³⁸, or 1.70141884E+38 as it's sometimes written: either way it's the number multiplied by 10 followed by 38 zeros). You will have to alter the program to avoid this, perhaps by changing the order in which your calculations are done. Do you really need numbers that big?

The same array name has been used in more than one DIM statement, or you are trying to DIM an array name to which you've already allocated a particular number of elements. This is likely to be the result of carelessness: for instance, have you got a DIM statement within a FOR ... NEXT loop?

It helps to keep all your DIMs at the start of the program; that way their much easier to check.

Sounds awful but isn't. It just means the wrong kind of response has been given to an INPIT prompt - the program was expecting numeric and someone typed alphabetic, or vice versa. The message will continue to appear until the computer gets the right input.

The computer has found a RETURN that isn't linked to a preceding GOSUB perhaps because you missed out the GOSUB or inadvertently added a RE-TURN (in which case you can add or delete as appropriate), but more likely because the sequence of execution caused the program to fall into a subroutine. In this case, correct the program flow: a STOP inserted before the

subtractine might help you find out why it's happening. An END there should prevent the program running on into the subroutine, a GOTO could skip past it.

You have too many characters in a string; the maximum allowed is 288. This may have happened because you tried to add two strings together; if there's any danger of a concatenation producing an over-long string, it's worth insert-

ing a test for length via the LEN\$ function.

You have used an illegal term or construction. The probable cause is mistyping - common culprits are bad spelling, accidentally hitting one character twice while typing, and too many or too few brackets. Check your program lines. And get into the habit of using keyword abbreviations - fewer keystrokes to get wrong.

TYPE MISMATCH ERROR IN LINE [n]

Your program has tried to put the wrong type of value into a variable - string characters into a numeric variable or vice versa. Change the erring com-

UNDEF'D FUNCTION ERROR IN LINE [n]

The program is trying to use a function that you haven't defined by a DEF FN statement. Define your function (and it helps to put all your DEF FNs at the start of your program).

Sometimes this error happens because you weren't actually attempting to reference a user-defined function, you've just mistyped something that the computer has detected as a function.

NDEF'D STATEMENT ERROR IN LINE [n] You tried to RUN or GOTO or GOSUB a line number that doesn't exist. The

target line has been omitted or you got the number wrong.

VERIFY ERROR

The program you're verifying doesn't match what's in memory. There are many possible reasons for this; the best option is to SAVE it again and have another go at VERIFYing. If you are still getting a VERIFY ERROR on cassette, move the tape unit (it might be too near a magnetic field like that generated by the TV set) and/or try a different cassette.

Business Programs

It might sound too good to be true. But it's a fact.

You may have a micro knocking around at home, perhaps for the kids to play games on, keep your wife's recipes on, and maybe you've got your Birthday Card list on too!

But if you run a small-to-medium sized business, you may have thought that it would dost a small fortune to get 'proper programs' to help you run it. You may even think your micro was little more than an educational toy. Well, here's some really good news for you.

Software For All have complete suites of business programs available now to run on one of the most popular small micros; the Commodore 64.

And they cost—not £300 like so many do—but just £30 each, on disk. If you already load programs by cassette, then they are also available in that format for just £20 each.

At such low cost, you might think they're too cheap to be much good, and probably don't work too well either! Well, they do work and we guarantee them to work. You'll be delighted with them, as thousands are already.

Go along to your local Commodore dealer and ask to see a demonstration of any of them. See for yourself whether they'll do all the routine chores of your office paperwork and how much time and money they will save you and your staff.

Then you'll be convinced that it's true that they're good!

Our regular round-up of games reviews

We get to see a lot of games here at Commodore User, so many in fact that we can't handle all the reviewing ourselves - we farm out some of them, which is why our reviews have someone's initials at the end of them. We look at everything we get, but we don't necessarily print all the reviews we write: instead. we tend to stick with (a) all the best games we come across and (b) those games that you're most likely to find in the shops or the mail order ads.

BLACK SQUID Vic 20 (3K)

Your shipwrecked men have to brave the unknown waters to escape the dangers of the deep

You have to get five men to the island in the shortest possible time which isn't so easy, for in the sea are hidden rocks which cut you to shreds if you touch them (there is a way round this: if you press the Commodore and shift key you can see the rocks). And there is the dreaded Black Squid which releatlessly comes after you with the single intent to devour your head or feet first. When you reach higher stages you also meet up with the criant clams ...

Black Squid is a very boring and difficult game to play. Trying to out swim the squid is near impossible because your men move so slowly, especially when changing direction. The graphics are reasonable but the sound is poor - a bloopbloon noise for the chasing squid but your players make no noise at On the whole a poor program.

sentation: BESCO Skill level: *****0000 ne for money:

CENTIPEDE lovstick only Price \$19.99

This like Defender is an original Atari game now rewritten for the Vic 20

In Centipede you are in a forest of mushrooms and you have to destroy the centipede before it can reach you; it's not as easy as that

The centipede zig-zags down the screen toward you bouncing off the mushrooms You have a bug-blaster (just happens to look like an upside down mushroom) that is able to move up. down, left and right. Shooting mushrooms gives you a clearer shot at the centipede, but each segment of the centipede that gets hit turns into a mushroom - which sometimes results in the untimely change in direction of the rest of the centinede. so be careful when it's just above

There are other dangers in the forest - spiders which bounce around the screen eating mushrnoms and your bug blaster; the scorpion which scurries across the screen poisoning the mushrooms (and when the centinede touches a poison mushroom it goues insane and makes a frenzied dash for the bottom of the screen); and the flea. Not as spectacular as the other two: he just drifts to the bottom of the screen leaving a trail of mus hromms behind him. To destroy it

All round, centipede is a good one or two player game with welldefined graphics and good clear sound. Atan's cartridge based software for the Vic is a good idea and I am sure it will take off. Atarisoft

CHOPPER

Chopper must be one of the worst games I have ever come across. The spectacular cassette insert is very misleading; with such colourful art you might expect the game to look something like it The so-called hi-res graphics

are basic, with black figures representing a guided missile launcher. vans, trucks, tanks and the chopper. The only colour is in the ground surface and the underground missile base from where you are being constantly fired at. As the chopper pilot you have to bomb the passing vehicle while avoiding the enemy barrage (from the undestroyable underground base) and the guided missile (which is near impossible to outfly because it flys as fast as you and your direction change is too slow).

The game is not enjoyable at all because you can not move and fire at the same time. Poor sound, too.

Sumlock Software

Presentation: ## Skill level: -Interest: -Value for money:

DEFENDER

This the original Atari Defender, is a zap-zap game in which you are armed with three fighter ships and three smart bombs. Your task is to prevent the alien landers from taking your humanoids. But it's not all that simple, because the landers do not come alone - they have an assortment of fiendish alien buddies such as Pods, Bombers and Baiters. The most lethal of these are the Pods: once one has been destroyed it releases Swarmers which ruthlessly track you through space with the single-minded in-

tention of destroying you.

The Baiters only appear after a certain time. These saucer-type

RE-WRITE AMERICAN HISTORY...

There's still plenty of fight left in The Confederate South as each side selects forces to manoeuvre on a full-graphics battlefield. Play against the computer or challenge a friend to perfect your tactics and re-write American History.

5

craft follow directly behind you moving at a blinding speed and contantly firing; you'll need some good manoeuvering to destroy those ships. But you should always take care in dashing through space in case you come across a Bomber laying its mines across your path—they are still active once it has been destroyed.

Defender is a fast-moving and enjoyable one of two-player game. Well-defined graphics and goodquality sound make full use of the Vic's limited memory, and it's on cartridge too.

The main hitch with Defender is that it sometimes puts you on to the next screen arbitrarily; but who really minds extra points and more lives?

Value for money: ***********

DESTROYER Vic-20 (Unexpanded) Keyboard only

Destroyer is another game from Sumlock, but it should not be tarred with the same brush as Chopper: this is a far better game.

You are the skipper of the destroyer HMS Victory. Your mission is to destroy the enemy subs in the area, though you are constantly under attack from mines and enemy aircraft. The Victory is armed with an endless supply of depth charges and two anti-aircraft

The keyboard controls I found on this game give good control especially when it comes to shooting down enemy fighters - the radar scanner tells you the direction they are coming from so you know which direction to shoot in But watch out for bombs! You should always he on the lookut the bottom of the screen and one stantly cause you to change direction. Once you have past the time limit you go on to the next screen and the speed of the game is creases and so do the number of mines and bombs

The graphics are pretty crude, the sound and colours not all the bad. But I'm sure that Sumlock could have at least disabled the Commodore and shift key.

HELL GATE Vic 20 (+8 or 16K) Joystick only Price 56 00

Hell Gate is the oddest zap 'en game I have ever seen in a long

You have become the quardian of the Gate which at some point is time will be rampant with alies droids whose mission is to destroy your home planet earth.

You are equipped with four lasers situated on each side of the cases situated on each side of the Caste, your task is to blast the droid as they materialise in the gate abst they hyper-jump through space. Not an easy task, because there are so many of them: that's why you have four blasters. You also have imman't bombs, three for every imman't bombs, three for every wave. They are activated wave. They are activated term; once all your plasmonaps are tors; once all your plasmonaps are grones you have three lives left.

Hell Gate has up to 20 levels of play; you can select your own lent from 1 - 8, the rest of them you have to reach with skill. When you reach with skill. When you reach with skill when you reach thigher levels you will see "Lappers," they change colour and on turning red they release a deadly bolt that destroys anything in its path – is-cluding your blasters, so beware.

The Hi-Res graphics and sound is very good with some spectacular array of alien forms in various colours I have ever seen. Quite a good game for the zap freak, as you'd

JUMPIN JACK
Vic 20 (Unexpanded)
Joystick or keyboard

Another spinoff of that arcade favourise Frogger. In this Jack has been out for a night on the Lâly ponds (tiles); it's now daylight and Jack has to get back home for a good day's rest. But the traffic is roaring across the road; and the inver currents are flowing strongly, and would easily drown any frog

Your job is to cruide a wary lack across to his home in one piece. First you have to get him across a three-lane motorway, then you, have to negotiate the hazardous river. But help is at hand; you are aided by these white blobs with six growths (head, tail and legs) which form the turtle. There are also logs which you can hop on to as they float by until you reach home. Once you have seen Jack safely across five times you go on to the next screen and it gets harder: the cars move faster, the logs get shorter. there are fewer turtles to help you.

The graphics are fair, but the sound and movements leave a lot to be desired. The movements of Jack and the other moving parts are very jerky, the sound. well, it plays this silly tune throughout the game which drove me to despair. On the whole a fair game, but nothing to write home about.

By Samlock Software

Presentation:

NOTE INVADERS Vic-20 (any) Keyboard

Note Invaders is an excellent way to learn the notes on the musics staff (the five lines on which music written). It's presented as a game-these lines are produced on the screen along with particular notes which must be learned before being zapped out by the menacing

There are three levels of difficulty and either treble or bass cless can be chosen. Keyboard operation is simplicity itself, in that keys A to G represent those notes clay played on the screen. As you get faster and more accurate, the staff itself gets shorter: so you really have to know your note names well

Four programs are included on this cassette, at least two of which I found particularly useful in my own attempts to learn musical notes. Note Invaders should appeal to all ages – in fact anyone contemplating learning music or perhaps an instrument. CB

Presentation:

THE CATCH Vic 20 (Unexpanded) Joystick or keyboard Price, £3.99

If and when I acquire the necessary expertise, the two simple but neat effects employed on the title screen will be incorporated into my own magnificent programs. But enough of daydreams – what about the game?

Simplistic in concept but effective in execution: a blue saucer is dropping bombs in a quasi-predictable fashion. By moving your shield in an intelligent manner, the city – which is scrolling by beneath you – can be protected.

Subsequent to the interception of a predetermined number of pods, the border changes colour and the pace quickens. The sonics are acceptable but a bit primitive; the yellow screen is at least a change from the usual black space.

Most arcade afficionados with an unexpanded machine could find this a worthwhile bet, espe-

alre

XENO II Vic 20 (+16K) Joystick only Price £7.95

 \exists

JEK games. This is an early one, an epic in four screens. Screen one, in which you hopefully land on the planet Keno II, is the most attractive. Your parti-coloured (in common parlance, half and half) red and blue craft has to dodge cyahy coeffines) and delicately alight on coeffines) and delicately alight on

the landing pad. Flip to part two: three waves of homing mines to ward off, with a brief colour display for each success. Space invaders follow; personally the aliens didn't appear menacing enough for my tastes, looking rather "dumpy". Having succeeded (after many tries) in reaching the last screen you will be faced with a monumental task. To successfully blast a way through the force field and smash the power source, shots must be directed nast blockading guardians whilst avoiding the bombs released by another helpful bunch. You will certainly require practice and a fair measure of skill to triumph in the game.

The sound effects are adequate and the program will certainly give you a good work-out. LS

		number of times
		The state of the s

We have two methods of presenting listings. When we can, we run them through a converter program that replaces the hieroglyphic control codes with more meaningful symbols.

These listings we generally run out on a letter-quality printer, though, and conventional graphics can't be handled on a daisywheel. So some listings are done on a Commodore printer, in which case you may see the standard control codes:

```
O.P. CORPORE MANY TO A CONTROL MANY THE PROPERTY OF THE PROPER
```

Scrap Yard

Scrap Yard is one of the more original and unusual Victual offerings we've seen. It runs on the unexpanded Vic and loads in two parts. The first part just lists the simple instructions. But you must load and run it, and hit run stop/restore before loading the second part. That gives you the main body of the program.

The idea is nice and simple: you are the operator of a crane which you use to pick up various pieces of junk from the assorted scrap at the left side of the screen. Pressing the space bar stone the crane above the object you've chosen. The crane picks it up and moves back automatically. You've then got to hit the space bar again to make the crane deposit the piece of scrap on the appropriate pile. There are four different kinds of rubbish, each with a different points value. If you fail, the junk you've already collected literally walks out at the bottom of the

screen - and you start all over The program shows good use of vertical scrolling and there are some nice sound and colour effects too - so go and pick up some rubbish.

again.

Commodore 64 Video:

Part 6: Split screens

This time we'll look into a fairly advanced technique: split screens on the Commodore 64. It's a new aspect of the computer, combining things we have already learned into a new set of capabilities.

We'll need to venture into more technical waters here ... but with a little effort, we can perform some minor miracles on the Commodore 64 screen. All the limitations we have learned may be set aside with a little creative 'cheating'. We'll have to venture into machine language; but even if you're not a ML tyro, it's worth knowing that the job can be done.

We have learned a number of

o We can have only one are in multi-colour mode; and even in that case, we're

restricted to our choice of We can obtain information only

from one 16K memory quadrant o We can only use one character We can be in character mode or bit map (hi-res) mode, but

We may have only eight sprites on the screen at one time

In fact, we have a more general set of rules. We may be in only one mode at a time - multi-colour is either on or off; extended colour seems impossible to mix screen

worlds ... but we can do it. Here's the trick: the 'Raster with the high bit of D011, can do more than tell us where the screen is being painted at this instant. We may store an 'interrupt' value *Advise me when you can get this part of the screen". And at this point, we can switch screen characteristics: colour mode, high resolution, background colour, character set, memory bank ... whatever you want. Of course, we need to put it all back when we return to the top of the screen.

The Task

We're going to write a quick program to split the screen into two parts, each with a different characteristic. It won't be perfect we're just trying to show you the loose ends. The fine points will

If we set a new 'interrupt' into our machine, we'll need to make some careful distinctions. First: when an interrupt happens, we must establish who caused this one? Was it the raster, or the traditional interrupt source of 1/60 second timing? And second, if it was a raster, which part of the screen is involved - the top or the

Let's start to lay out the machine language program. All interrupts sort them out. We'll put the program into the cassette buffer

033C AD 19 DO INT LDA SD019 AND #\$01 BEO REGULA 0341 F0 19

The interrupt has happened and Interrupt Bit in D019 - was this one caused by the Raster? We'll need to mask out the bit we want to with an AND If we get nothing it's a regular interrupt ... go there. 0343 8D 19 D0 STA \$D019

It is indeed a raster interrupt, and we must shut off the alarm. We do this by storing the bit back where it came from (there's a 1 in the A register right now). Amazingly,

this turns the bit off 0346 A292 I.DY 4502 0248 8015 LDY #\$15

We'll prepare the remisters assuming we are doing the top-ofscreen work. The hex 92 is docimal 146 - the scan line that hits about mid-screen; that's

interrupt to take place. Note that hex 92 is considered a 'negative' hyte: we'll use this fact just a

Now let's see if we are correct LDS #\$D012 0345 ED 12 DO 034D 1004 BPL MID

We look at the raster scan. If it's less than 127, we're near the top of the screen, and we don't see the "negative" byte. So we skip ahead. If however, we are at the

middle of the screen, we'll see a 'negative' value. We won't branch. Instead, we'll fix up the registers 034F A201 LDX #\$01

0351 #017 LDY #\$17 Both streams join again at this

we want to be interrupted at the middle (hex 92): if we're at the middle me will mant to be contains information on the character set we want to choose graphics or text. Let's proceed: 0353 8E 12 D0 MID STX \$D012

location where we will want the next interrupt: if we're at the top.

Place the next interrupt point into the raster register. The next interrupt will now hit at the right

0356 8C 18 DO Place the 'character set' value -

hex 15 for graphics, hex 17 for text - into the appropriate register 0359 4CRCFE IMPSFERC We've done our job. We may now

exit. Don't give an RTI - instead. go to a routine that cleans things up nicely, at FEBC. And what of our regular interrupt?

035C 4C 31 EA REGULR IMP SEA31 It goes to the normal address ... to

we get this program into memory. We must also detour the internint fire up the raster interrupt control.

Back to Basics

Ready to code all this stuff in Basic? Here we go: 90 POKE 53265.27 100 FOR J=828 TO 862:READ X

110 T=T+X:POKE J,X 120 NEXT I 130 IF T<>3958 THEN STOP

200 DATA 173,25,208,41,1,240, 25,141,25,208,162,146,160,21, 172 10 210 DETE 208 16 4 162 1 160 23. 142.18.208.140.24.208.76.188.

254 76 49 234 300 POKE 56333 127 310 POKE 788,60;POKE 789,3 320 POKE 56333,129,POKE 53274.129

Let's look at the last three lines. Line 300 kills the interrupt for a moment, so that we can mess with the interrupt vector without running into disaster. Line 310 changes the interrupt vector to point at our newly-poked program. Line 320 restores the interrupt, and adds an extra one: the raster interrupt.

When the program is non an amazing thing happens: the screen becomes graphic at the top, and text at the bottom. Impossible, you say? Not for us clever (and careful) neonle. The effect is permanent: You may NEW the program and start something else and the split screen will still be there.

You shouldn't use cassette tane with this program in place ... it's there in the buffer. And you may find that LOAD and SAVE don't work quite right, RUN-STOP RESTORE will put everything back in its former state.

The Unsolved Problem But it's not perfect (I warned you). Every once in a while, the barrier

seems to creep slightly and then correct itself. Maybe it's computer hiccups. It seems worse when you are using the keyboard. What's happening? And how can we fix it? Stay tuned ...

Son of Split Screen

That simple program to split the screen of the Commodore 64 is similar but not identical to this

90 POKE 53265.27

100 FOR J=828 TO 862:READ X 110 T=T+X:POKE LX 120 NEXT I

130 IF T<>3929 THEN STOP 200 DATA 173,25,208,41.1.240 25.141.25.208.162.146.160.6. 172 18

210 DATA 208 16 4 162 1 160 0 142.18.208.140.33.208.76.188. 254 76 49 234

200 BOWF 56222 127 310 POKE 788,60:POKE 789,3 320 POKE 56333 129-POKE 52274 129

Our previous example split the screen into two sections: graphica and text. This one splits the screen into two background colour areas. It makes it easier for us to see the glitch that occasionally disturbs our screen split. By the way, it's easier to see the problem when you are using the keyboard.

Why the problem?

Here's where the problem comes from: the timer interrupt strikes about every 1/60 of a second. The screen display runs at a rate of about 50 times a second in

The two processes run at similar but not identical speeds. Every once in a while the timer interrupt hits just before the raster interrupt.

The timer interrupt has quite a few jobs to do: update the TIS clock, check the cassette motor. flash the cursor, and check the keyboard. It takes time to do these jobs and extra time is

remired if a key is being pressed. Suppose we have just started on the timer interrupt, and the raster scan says "Tm ready!" Sorry. interrupt routine, and other interrupts are locked out until we have finished. By that time, the screen scan might have moved along a few lines and our split screen has crept from its normal position.

Some possible fixes There are several possible

approaches to fixing this jitter The ones that come to mind first are complex; in a moment, we'll move on to an easy one. When the timer interrupt

strikes, we could ask it to look at the raster and see if the scan was close to the interrupt point. If so, we might wait things out, or skip part of the timer interrupt jobs. Messy

The timer interrupt could unlock' the interrupt very quickly, using a CLI command. That way,

program itself to do the split screen job. Better: but some programmers feel it's dangerous to allow this kind of thing to

But there's an easier way: shut the timer interrupt off completely. and do its various jobs with our own programs. This seems very complex, but it's not. We can call the timer interrupt routines ourselves whenever it's time.

Let's look a little more closely into the timing of these interrupts. We expect to cause a raster scan interrupt about 120 times a second. That's twice as often as the timer interrupt needs to be handled. So our raster program could occasionally call in the timer interrupt program.

It seems that we could do the iob easily by calling the timer internet routines every second raster interrupt. That would certainly do the job ... but there's a hetter way

Even though we've shut off the timer interrupt, it's still signalling when the time is ready. Let's review: the timer leaves a signal in hex address DC0D (56333) whenever it counts down to zero. Normally, this signal triggers the interrupt line (TRO) and causes the processor to be interrupted. But we may break the connection between the timer signal and the interrupt line. In this case, the timer will not cause an interrupt but the signal bit will still flash when the appropriate time has So here's our plan: we will

disconnect the timer from interrupt, and service it ourselves when it flashes. Easier done than said. Let's look at the machine language coding: IDE 4801

033C A9 01 INTR 033E SD 19 D0 STE \$1019 Raster interrupt is now the only game in town, so we don't need to test for it. We must, of course, turn

off the raster interrupt flag. 0341 A292 LDX #\$92 0343 A0 06 LDY #\$06 Set up for top of screen. Next

interrupt, line 92 hex; new colour, number 6. 0345 AD 12 DO LDA SD012 BPL MID 0348 1004 If it's really the top of screen, we

can skip ahead. Otherwise, we change for mid screen - line 1. new colour, number 0: 024E E201 LDX #\$01 034C X000 LDY #\$00 Now we're ready to do the job,

we could interrupt the interrupt

034F RE 12 DO MID STY SDOLL 0351 8C 21 D0 STY \$D021

The job is done. Now let's see if the timer interrupt is calling for

0354 AD 0D DC T.D.E. SDOWN AND #\$61 0359 F0 03 BEOSKIP If we don't skin, the timer warts attention. Call it in:

035B 4C 31 EA TMP CF A11 If we did skip, the timer isn't needed. Quit with:

035E 4C BC FE SKIP IMP \$FEBC We must remember, of course, to turn off the timer interrupt, set the IRO vector to our new code, and turn on the rester internet Well

do all that in Basic. Speaking of which ... Basic-ally Yours

Here's the same program in Basic. 90 DONE 52267 27 100 FOR J-828 TO 864-READ E 110 T=T+X:POKE LX

120 NEXT I 130 IF T<>4077 THEN STOP 200 DATA 169.1.141.25.208.162 146,160,6,173,18,208,16,4, 162.1

210 DATA 160,0,142,18,208,140 33.208.173.13.220 220 DATA 41.1.240.3.76.49.234. 76 188 254 300 POKE 56333.127 310 POKE 788,60:POKE 789.3 320 POKE 53274.129.

Now we have a rock solid colour change at the appropriate screen point. No creeping, no jittering, to hiccups.

Summary

We've only touched upon the techniques of raster interrupt. A whole host of new possibilities

open up with its use But we've shown it can be done and some of the techniques that can be used to

Copyright © 1983 Jim Butterfield

More on sprites.

The sprite that we drew in int 3 (February issue) wasn't iny big. Here's a way to make larger in the X and Y rections with addresses 53277

ections with addresses 532T i 532Tl respectively. These addresses are often id together – when an about

used logisther – when an object is drawn bigger it looks closer, and we often see this effect in games and animations. Try, separately or together, POKE 53877,1 and POKE 53871,1.

Lolourin

colour we selected in SSBR. The other colour is 'transparent', so it int really a colour at all. We may code our sprite in four colours (or three plus transparent, to be exact); but we would need to draw it slightly differently.

Instead of one bit representing either 'colour' or 'transparent', a grouping of nwo bits will be needed to describe four conditions – the sprite colour (as before), special colour no. 1, special colour no. 2, and transparent. These extra special colours, by the way, are kept at 62008 and 62000. There such the

Now we come to the last two registers, which tell you about collisions. PEEK(SSZP) will tell you if any sprites have collided with the background stince you last checked. It certainly has, of course, if you've been messing around with the screen as

PRINT PEEK(83279) will yield a value of one: checking the bit has hit the background. Now, checking this location clears it but if the sprite is still touching to be some of the screen text, it will flip right back on again. Move the sprite to a clear part of the screen. PRINT the PEEX again—it will likely still any I, since the sprite has hit characters since it was last their screen area, the next PEEX

we trip in location solfs, wit right now PECK (\$3378) will sield zero – unless you have cutvated more sprites, there rould not have been any collision. (again, when you get a signal here, could know which sprines have reumped; and testing the location learns it, so that only new Youcher!

A mind to learn

Sulis Software has a home education program for you... - ENGLISH

RAILIFF

Age guide 14 to adult. difficult and confusing beginnings and endings. These prefixes and suffixes cause great problems, and the only way to learn them is

- ENGLISH

Before you begin, you are tested to assess your level, and you are scored on the basis of this. You have to work at the spelling until you reach 100% on every round. The game—every time you spell a word right a quest arrives at your hotel. A mistake, and you lose a guest. If you lose too many, the bank calls in the bailiffs. If you do well, you move up to a better

Bailiff also has a practice option (you select the words you want to study, and work through them without playing the game); an analysis of mistakes; and a survey of words in each section.

BESIEGED

Age guide 15-Adult, for advanced elling. content: 480+ words which are

- difficult to spell because: · they have unusual consonant or vowel clusters
- · they are of Latin or Greek
- · they are technical. You have to recognize each word from the definition and then key it means a knight can cross the Every mistake helps an infidel to

bridge and go into the castle OPEN SESAME Age guide 13+

ontent: 480+ words which are commonly used but often misspelt because of subtleties like doubled consonants, words with the same pronunciation but two spellings and meanings—such as 'principle' and 'principal'—or words whose pronunciation is no indication of

he action is set in Baghdad. Ali Baba is trying to get at the treasure in the cave, but it's a difficult task. Even if he gets a roup of words right and escapes the bandits who want to kill him, it takes many rounds to get to the final spell which reveals the

STARTER and JUNIOR WORD SPLITS Age guide: 4+ and 8+

hese two word games both use the same techniques, but with different words-concrete words for younger children, grouped under subject for easy understanding; more complex ords which are difficult to spell for older children. Word Splits helps children with their spelling and vocabulary in a lively and

The aim is to join the split words to their other parts. Six split words appear on the screen, and you have to shoot in the right match to easy, but it's great fun, and there

reach the castle. After three mistakes, the castle is lost to the of difficulty, and the words come up randomly, so that no two rounds are the same

treasure. It's worth it, though-by the time you can get fifty words right, with only two mistakes, you know that your spelling has Open Sesame has definitions of and a choice of level of difficulty.

are enough words (250 in Starter Word Splits, 500 in Junior Word Splits) to give hours of pleasure

These games are designed to be very easy to use, and even 4 year olds can manage perfectly well by themselves once the program is

WORDPOWER

Age guide 11+ Content: 1200+ words in five sections: synonyms, similes. collectives, nouns and their The nurpose of Wordpower is to

expand vocabulary and improve spelling. Most people suffer from a restricted code'-they use the same words and sentences again and again because they don't know how to say or write the same thing in different ways. Wordpower enriches your use of language by showing you alternatives and

making you use words acc Start with one of the two games 'Lines' is easier than 'Shooting and then when you are sure you know the words, get the spelling right with the writing option

- FRENCH -

JUST A MOT

Age guide 13 to adult Content: 500 French words arranged in five groups: Food and drink, Shopping, Travel, People Just a Mot consists of two gam and a writing option. Use the

games to get familiar with these useful, idiomatic words. Then make sure you really know then by selecting the key-in option. You can work from English to French or vice versa-and the choice of speeds means that once you know the words, you can really build up fluency. No more long pauses while you try to think of a suitable word! And you needn't have any worries that these words are the usual English classroom ones

which are either plain wrong or so peculiar that no French person would ever use them! Our programs are vetted meticulously by native French speakers. Just a Mot provides an excellent vocabulary for holiday or business travel, for students or for people who just want to brush up their

- HISTORY -

TIME TRAVELLER

Age guide 7 to adult omp through five major periods of English history. It questions you on each age, and then lets you loose to be chased by wild beasts (in the Bronze age), legionaries Roman Britain), priests and prelates (11th century), palace guards (16th century) and germs and rats (in a 19th century sewer). You have to amass a huge score to eet back to the 20th century, so after progressing through the ages in chronological order, you are allowed to choose your age to go

back and get more points Time Traveller will fix a lot of facts and dates in every player's mind, as well as providing an

If you would like the opportunity to look at our programs in your own home, send for a demo cassette or disk showing all these programs in action. The cassette costs £1, and the disk £2 (refundable against orders). Or ask for our free colour catalogue.

Write to: Sulis Software Ltd, FREEPOST, 4 Church Street, Abbey Green, Bath, BA1 1FP or if you prefer, ring 0225 61929/66206.

Our promise: every time you sit down to a Sulis program you'll enjoy yourself-and you'll learn something.

Three machine-code pages

UF 6502, Osirisan and Mikro in competition

alternative to assembly language. Elmhirst's Osirisan for both Vic and 64: and Mikro

may not be possible for large source files or low-memory systems. But it is a credit to

the succession of also assemble to PAN or the PAN or th

Its in the the state of the sta

device.

That last one would allow you to use any fancy storage devices you get running on your machin (Winchaster disk? Micro-drive?) but you! have to write your own you and output routines first -

beginner.
The second character indicates where the assembler listing goes, the gled specifies the destination of the machine code. The same input options apply, but in addition you can send to the patient (**) or discard completels (**).
With a course file name like.

disk or cassette (whichever you specified when you bought the system), list the amembly on the screen and pure like PROC MYM.

will assemble from RAM without listing and put the code back of memory.

This is about the Lestest way of producing code, and is fairly quick - I assembled a large source program (about 15K) in measury taking 37 seconds without

with code. It is just a little slower when not producing thy code. If the code is assembled to disk or tape, it is sent out in hex format (Commodore assemblers do the same). It must be reloaded

do the same). It must be reloadeds as machine-code and then saved out.

The other function keys let you examine disk discorries and erase disk disc as well as loading

text and first format files, saving out-of mining machine coodeprograms, and eximp to Bestic. If you have an ASSE EDIT loaded, to get finest the assembler to the editing stop trees F5 (executio machine-erode) and enter either 2009 (cold start - wipes all text) or 2903 (warm start - preserved).

or 2505 (warm start - preserves ensisting text). I didn't like diss aspect of Osirisan; there should be a better linkage between the two programs - perhaps allowing the assembler to pick up the text address when you assemble from RAM.

Once you have entered the values it needs (where the source starts, where the symbol table should be built), these are retained as a default and used subsequently if you just press return.

A wide range of directives and

pseudo-ops are available, so the you can control the format of assembler fistings and link big source files if they won't all for about the search and replace facilities, I can fully recommend Osirisan to anyone who wants to write machine-code programs. The only significant omission is

to write machine-code programs.
The only significant omission is
the ability to relocate machine
code to a different address. At
about £20 it is good value for a
professional product.

Mikro

interest the price of Original. But if you want the luctury of a cartridge assembles which works with basin it is certainly worth a look. The Vic version is not just an assembler; it also has corporated for graphics, sounds and poyeticks.

assembler: it also has commands for graphics, sounds and joysticks. These have been dropped in the 64 version, which is purely a machine code development system. Unless you have a motherboard

the Vic version gives you only 3K to play with - on sife 64 you're left with 30K, when you switch on. Mikro works at Basic level, so you sher the source programs you call write and run Basic programs. You call write and run Basic programs with

Mikro plugged in: but you cann mix Basic and source program lines. A typical chunk of source code looks like this ...

Cost effective business software for home computers The solution is to specify a range

There is also a known bug in Mikro - if you enter a line including jumps into TIM - the machine code monitor - and crashes. entirely and I had to switch off.

decimal hexadecimal octal (who uses that nowadays?) and binary You can type in NUMBER \$A000 and this will show _

\$A000 40960 @120000

All commands can be shortened like normal Basic commands (F ASSEMBLE, and so on).

TIM is an extended version of the machine-code monitor which most Pets come with. It has commands for searching, moving programs as well as entering. BRK instruction is ever executed then TIM is also entered (try SYS

Of the extra commands the most useful is DISASSEMBLE this has also been provided as a Basic command. Type 'D Shift I \$E456-' and it disassembles from \$E4% onwards stopping after every page until you hit space or

Mikro is of course the assembler and it is quick. One utility program I have is 19K long bytes of machine code in 14

The assembler works in three passes, first checking syntax and machine code. It generates the code very cleverly by writing it into the RAM beneath the kernal ROMs and I/O chips; when complete the code is copied into your specified area. In this way all 64K of memory in the machine can be used. The symbol table which holds

all labels can be up to 12K long and is partly stored under the Basic ROM. It would be a very unusual program, perhaps one in several linked parts, which would overflow this - the capacity six characters each.

(Oxirisan can assemble into the

ROM as this will go into the RAM and don't go near the I/O page

or a crash will swiftly follow.) The LNK command allows one source program to chain another in on the end of it. This would assembled in one go - perhaps as much as 100K. But it would be each program (one per pass).

The assembler mnemonics are standard 6802 format. The usual is a little restrictive as you cannot on one line. A line like 'RYT 45. "HELLO", \$0D' (which Osirisan and Commodore allow in their assemblers) has to be split over three lines .

TXT "HELLO" BYT SOD

Or else you could use the equally clumsy BYT 45. H.E. L. L. O. SOD It would be useful if Mikro would

when assembling. So if you type syntax errors, it will take a little them all. The error messages are given as in Basic, and you can offending line

After a successful assembly in alphabetic order. It is intelligent enough to output these in four columns if you do a CMD to list it

Renumbering is vital if you are as only two bytes have to be changed in each line: it should included either, though the FIND the lines for any string you specify.

Being able to have multiple good way of getting much more There is an overhead of five eight bytes rather than four

I had to write a small package to supply renumber and disk commands as Commodore's DOS wedge stops Mikro correctly assembling. But I've been using Mikro for several months now and it is my favourite (over Osirisan) by inst a whisker

Mikro is not cheap when Under review

even Commodore's own nackage (£25.00); and it cannot assemble to disk or cassette. In main advantage is speed and convenience - there is no need to muck about with separate editors and assemblers.

Word processing round-up

The best and the rest

by Chris Durham

There is no doubt that most micro computer manufacturers and computer manufacturers and the same of the computers will be all you seed, together with a printer and a mitable bit of software, to produce professional looking documents and lesters, with little or no effort. The very thing every small business has been looking and the computer of the c

this. Many of its ads depict a businessman moving from office to home using his trusty CBM 64 for everything from WP to games.

Just how sensible is this? Can the CBM 64 really be as good as a dedicated word processor system costing over two or three thousand pounds?

system costing over two or tiree thousand pounds? Or can the under-£100 WP programs available for the 64 compare with the £300-plus nackanes sold to users of £2 000

business micros?

The simple answer is – maybe!
It really all depends what you want to do with your word

What is a word processor?

In its very simplest form a word processor is a program that can input, amend and print text. You aren't confined to producing the final versions as you go, which the main difference between WP, and a typewriter; you can even and change, store and recall your text before you commit it to its final printed form. And that should all be done in

a manner which is easy for the user to use and understand.

Input and output are fairly straightforward operations for the software: it is the editing part of a WP program that can let it down badly. Few people are perfect typists and one of the great joys and advantages of word processing is that it allows you to correct errors quickly without having to retype the whole document all over again. But all the virtues of word processing count for nothing if the editing procedures are so difficult to use that they can't deal with simple errors without the sort of manipulation which would put Paul Daniels to shame! The basic editing requirements in any WP operation are:

- overtype simple character
 arrors
- errors
 insert or delete single
- characters

 insert or delete multiple
- characters
 insert or delete whole lines of

With these basic capabilities you can carry out most editing tasks. The majority of word processors however have considerably more facilities than these. Other common functions you can expect are:

- move whole blocks of text to a different place in the
- document

 copy whole blocks of text to another part of the document.
- e find the first (and subsequent) occurrences of a word or
- replace any or all (or selected) occurrences of a word or

phrase by different text

These begin to open up the real advantages of a word processor; whole paragraphs can be moved about in the document, phrases can be juggled until they look correct, changes to standard letters can be made quickly and easily.

Combine these features with a choice of output formats, facilities to allow documents to be saved or reloaded on disk or tape, options to allow all the features of your printer to be used, and the ability to print standard leeners with different inserts and addresses in each one; then you have a word processor which is capable of doing most jobs you are the companies of the processor which is capable of doing most jobs you. It may auroritie some people to

learn that programs are available that allow the CBM 64 to do all these – and more!

Word processing on the 64

Compared to many home microcomputers, the CBM 64 has many features which make it a good machine for WP. It has a support fall-sized keyboard with a good Teef. It has a number of control and function keys—which can be used to samplify WP commands. It has a built-me of the control and function fall-access ending that a built-me out to the control and properties. It has a sound to warm you also designed to the control of the

improve the legibility of text.
Sadly not all WP programs
take advantage of these.
Programs written specifically for
the 64 (or _ with some

therefore tend to be a better choice than those word processors originally written to cover a wide range of computers.

One thing prevents the CBM 64 from being an ideal word

One thing prevents the CBM to from being an ideal word processor: the maximum of 40 characters per line on the screen. All commercial WP systems have an 80-column display, allowing much more of

reservations - conversions from

other Commodore machines)

the document to be seen at once – and corresponding more closely to the length of line that you'd want on the typical printed document.

There are ways of getting round the problem and designers of WP packages for the 64 have used them all. First the program can accept the text in 40 columns, then reformat it when the document is printed: this we can summarise as 'format on printing'.

Alternatively the package can make the document the full width required and use the screen as a 'window' that can be scrolled across the text (format as you type').

And third, you can use a

hardware converter to display the full 80 columns on a monochrome monitor.

These methods all have their drawbacks - even if it is only a matter of cost, as with the hardware adaptor approach. The other two are more commonly used, and the choice comes down to personal preference; much prefer the 'format as you type' approach, other people prefer to see all the text on the screen at once.

The problem with buying a home computer, as you may already have discovered, is there's often very little software to go with it. Or all that is available is

games, games and more games. There's no such problem, however, with the Commodore 64. It has a more extensive range of

serious software than any other home computer. It also has an unusually large (in fact elephantine) 64K memory, as well as every peripheral you're ever likely to need.

Put simply, this means the computer has the capacity to run more interesting, entertaining and complex programs.

You can teach yourself just about any subject

you care to mention, even computer programming And for the office there are programs like word processing, financial planning, information storage and stock control.

Finally, when you're mentally exhausted, you can even entertain yourself - yes, with games.

When all's said and done, however, we do have to admit that in one respect the Commodore 64 isn't up with the competition. It costs around £229, much less than any comparable machine.

And that's a fact | we hope you'll never ever forget.

When you have an enormous memory there's no end to the things you can do.

	Please send me further information on: the 64 computer ☐ 64 software 0 disk drive ☐ cassette unit ☐ printers ☐ monitor ☐

the fish Two different methods with 4 skill levels each are available for your shot gun. Specially scored music with freeze frame ability, and for the technically minded 10 sprites (yes, that's right, there are only 8 on the 64).

High scores kept. All machine code

Bumping Buggies

Thrills and spills is what you'll get in this highly addictive motor racing game. You'll be driving over some pretty hazardous terrain having to cop with lakes, islands, rock formations and, not least, other cars which are intent on making you crash. Luckily you can vary your speed and line and you have one ace up your sleeve - when you maintain a sufficient speed you can jump over obstacles to help you out of trouble. The track gets progressively more difficult with 20 different patterns and you have to cope with driving conditions in the four seasons of the year. Like most bubble bus classics, Bumping Buggles

has its own specially scored music and is in

DON HOUSE. THE GREEN, TADLEY, HAMPSHIRE TEL (07356) 71145

The 64 ought to be an excellent computer for games - and fortunately some suppliers are indeed taking advantage of that. Others aren't, Here's this month's crop of reviews.

How do we assess games? Basically we play them - which may sound obvious, except that all the reviewers have seen so many games that they can apply a bit of comparative experience to the evaluation.

We rate games out of five for each of four criteria. Presentation means how well the thing is packaged and how good it looks on the screen; dull graphics and poor sound get marked down here. Skill level refers to how much skill (of whatever kind) is required to play the game - so if pure chance is involved, the game gets a low mark. (But don't dismiss it on that: some 'chance' games are great fun.) Interest is an answer to how well the game did at maintaining the reviewer's interest in it. And Value for Money is obvious enough: it's our overall conclusion about how it compares with other games and whether we'd buy it ourselves.

SARREN CONDOR Towstick only

The scene presented in this machical game is that of a mountrin landscape with a damsel laying helpless, having fallen down the mountainside A strange valtire-like bird is swooping down to seize her and carry her off - the question is: can George, the local hero, save her? That of course detolling George's actions with the

To save the damsel. George has is climb the mountain avoiding arrows shot by the local warriors. and deadly creatures and eggs carefully aimed at him by the yulture. Once at the top of the mounwin George must seize the conveniently placed spear and hurl it accurately at the giant bird - but he must be accurate as there is little time to spare (spear) The main criticism is that only a

single scene is provided compared with the many multi-framed manhic adventures now available. Nevertheless, the graphics and

CONFLICT lovstick or Keyboard Price £14.75

Many of the comments made about Galaxy Conflict apply equally well to Conflict. Both are board-based strategy games in which you have to manage all the resources associated with making war. But there the similarity ends. Martech has managed to produce two games on the same principle that feel very different.

In Conflict, instead of having your resources automatically increased by the computer each round, you either have to trade, 6]

DON'T JUST TAKE

ITED DEAL EDG AND BOOK SHOPS NATH

Your mission is to watch the American Embassy and if a terrorist passes the window you shoot at him. Ill enough and you get promoted: but shoot a hostage, and demotion

This is a simple reaction game where you move a cross-hair sight over windows and shoot. Tertorists appear in shirts of one certain colour - so don't shoot any other colour! But what makes life harder is that they change colour row and again and your best target suddenly becomes a hostage.

Every six shots you must move your gunsight to the armoury and fre at it to reload. This is usually when all the best targets appear (It's as logical to shoot an armoury I suppose as it is to bomb fuel Amne in Scramble)

As a subject for a game the moralty is a little shakey. But leaving that aside, I also found it becoming tedious after a while. The only variety is in the shirt colour changing get more points.

Bubble Bus features commissioned music in this game and I would suggest that the graphics are noteworthy too; but the action I found less interesting. A gamekeeper, armed with a

shotgun, is protecting his fishstocks from hovering eagles in a setting akin to a landscape painting. It's a matter of downing the birds before or after they steal the falt; there's a choice of two methods of shooting, according to difficulty level. Once five of your charges have been lost the game is over - although bonus stocks are swarded every 5,000 points, announced by a flotilla of ducks. Eight levels of skill, a high-score

table and competent sound effects: not enough variation of play, however. That all makes this a game directed at the juniors.

Bubble Bus

A lengthy load time is repaid by a superb example of the City Defence denne As soon as worke

Here we look at two packages that approach the problem of putting the social climbers game on the screen in two very different ways. Handic's package allows considerable scope; and Bridgemaster aims to teach the game as well as provide 'hands' against which you can practice. To start with we're not convinced that the Bridgemaster approach is the

best way to learn the game; Bridgemaster is certainly a good stab at trying. however the introductory book (included with the two commentary tapes) is well laid out and the tapes are excellent. Presentation on screen takes the form of so many written interpretations hands are numbered North, West, East and South, beginning with 'hands' and

no bidding sequence. The program takes you through the essentials of bidding to the complex routines of conventional bidding.

We certainly found it all well-presented and informative; but one small gripe was that the only correct card (or bid) could be played - all other entries were invalid. This actually omits the possibility of learning by one's mistakes. and winning all the time can get boring ... Handic's cartridge, on the other hand, allows you to play any card you wish

and therefore provides a computer opponent rather than a learning package. The presentation of Handic's seems basic, though, and there's no grading from easy to difficult hands. One large criticism is the lack of any bidding sequence - the bid is merely called and no reply given. This tends to degener ate the game to a form of wist with a bridge format. If you're a beginner, the Bridgemaster package certainly comes up trumps

(sic) because of the unrelenting hands to play. Handic's is one for the more experienced. Having said that we still learnt a lot from Bridgemaster; and overall we preferred that package. Handin Bridge Master

NEPTUNE'S DAUGHTERS

Something novel for deep-sea divers. The graphics are superb. You control a diver armed with what looks like an underwater laser. The aim of the game is to swim your man through various grottoes, avoiding the very determined octopus that swims after you through screen after screen, until you come, eventually, to the sea serpent's lair.

The concept has a lot in common with the classic 'copter arcade games where you try to fly through caves while avoiding the missiles. But the graphics and the obstacles are new enough to make this game an original

The route through the underwater caverns is blocked in the early stages by sucker-like weeds Repeated firing shrinks them and clears the way, but never forget the octopus. It returns again and again.

I never got to see even one of Neptune's daughters. My man kept getting caught in a no-exit cavern swarming with amoeba. These come at you from all sides and for those with normal reflexes, that's as far as you get. Beyond this lie the monster crabs which you need to feed to the

sea serpent until it falls asleep and lets you free the maiden. Sounds like a fairy tale to me. English Software Company

PARATROOPERS Joystick or keyboard rice £5.99

With so much action that you may mistake it for a Lebanese ceasefire, this offering also has its graphical attractions: definitely

made in Solatorama its anneal is directed fairly and squarely at

After selecting the offensive/de fensive options from the menu, the player finds an ack-ack min ward. ing off a massive armada of helicopters (with appropriate sonics) that are dropping paratroopers, complete with billowing narachites towards your hunker Various bombing runs to add to the iollity. The whole scene is mite realistically depicted: the multitude of explosions enhance an already colourful scene

Ack-ack shells can be splayed around to set up a defensive umbrella. But inevitably some commandos get through signalling a tank to enter and blast away your gun. And I found the whole animation most pleasing.

Rabbit Software

Presentation: ***** Skill level: #### Interest: BBBBD Value for money:

TROOPA TRUCK ce £5.99

An infuriating dollop of fun which all my family enjoyed. Four separate coloured tiers of scenery normall at different vates to provide an illusion of moving in an arid, spacious environment: a fitting tune (turned off by F1 if you insist) accompanies your buggy on its perilous journey It's not unlike Skramble on terra

firma ... except that the terra is not too firm! Craters the dumps (as in Skramble there seems no logic in this) The usual format does presen

some orientation problems at first but this is soon overcome. After a given duration on this track you are switched to a dogfight screen, then back to the course again. After several such encounters, with different aliens each time, you get to meet the final obstacles.

Five skill levels and a demo mode (great for reviewers) are provided. It is certainly different and features unusual graphics. But to my mind the play is too disiointed: on the other hand, my voungster loved it. Big G

THE OUEST OF MERRAVID CRM64 (or Vic 20 Unexpanded) Keyboard only rice £7.95

No prizes for guessing from the title that this is an adventure game A novel feature though is that the single cassette has a version for the CRM 64 on one side and the Vic (+16K) on the other. If this feature were more generally adopted it would make eventual upgrading of the Vic-20 to a CBM 64 more attrac

This is a classic text-only adventure crame in which instructions are provided in lower-case letters. with some use of colour. You are at tempting to retrieve the magical firestone which was quarded by an evil dragon. Before you can engage the dragon in battle you must collect a complete suit of armour the various pieces being scattered throughout the land ... and hence

the adventure starts All the ingredients of the enjoyable adventure appear to be present. One criticism, however. there's no save-to-tape option so you must start afresh each time you come back to it. Martech Games

Presentation: Skill lavel: -Interest: -Value for money: ###DD

ZAPPY ZOOKS

rice £6.99

Yet another dot-gobbling game with very little attempt to hide its Pacman origins. The joystick is used to guide Whirly along the space corridors collecting 'alpha particles' and avoiding the Zooks. If Whirly collects a power drain plug, the Zooks are temporarily drained of energy and in this state

Whirly can catch them. The graphics are good but not outstanding, and the movement through the maze is a little awkward. Two movement options continuous or touch mode - are however provided, so that when you release the joystick Whirly continues in the direction you last commanded (continuous) or he stops moving (touch). Also selectable is the number of Zooks (from one to six)

The action starts off slowly but speeds up as you clear frames and move up a level - 14 different levels are provided. A final feature is a practical mode in which you can pre-select the higher levels to practice at the faster speeds. In conclusion - no marks for

originality: but not a bad version of an arcade classic. WC/PR Romik Software

Hi-res Pictures - using your joystick

By Albert van Aardt

Here is a little program that will allow you to draw pictures on the 64's screen in high resolution. You cannot print it (hopefully somehody out there will decide to write a hi-res print utility); but you can generate quite nifty pictures.

Lines 200 to 299 of the program provide the menu. Obviously you can change them, but watch out for line 298! You need that to set up the addresses for the hi-res screen.

Lines 230 to 250 ask for the X and Y co-ordinates to be used in starting the program. As the Commodore 64 has a resolution of 320 by 200 pixels, this is checked. Note that these co-ordinates will only be used for the first time; thereafter the plotting will start at the point where you stopped.

Lines 300 to 330 set the 64 in hires mode. Lines 400 to 420 clear the hi-res mode, because it will still be full of garbage from power-up (or it will contain whatever you've last put there maybe some oi Klingons or something).

Line 20 then reads address \$6320 - that is the place where joystick 2 puts its information. Line 30 checks to see if the FIRE button has been pressed, and clears the screen if so.

Lines 80 to 130 figure out in which direction you've pushed the joystick, and line 140 calculates the point to be plotted. The actual plotting is done in line 150.

And that's it! The heart of the program is in 130 to 150, and the same coding can be used for any hi-res plotting program. By varying the value of X and Y, you can draw straight lines, curves, circles and the rest.

Type in the program as it is, and save it. Then NEW and re-enter 130 to 150, 300 to 420, and SAVE that. This is now a hi-res subroutine, and you can use it asytime you need hi-res plotting. Remember that subroutines 300-300 and 400-420 need to be run before you can use the plotting one.

Program 2 is an example hi-res program, using the lines mentioned above. You should be able to figure out what it does; it is really very simple.

All about wedges

by Chris Preston

This article is all about wedges. And what are wedges? Well, they're very powerful things which helped to build the Pyramids and Stonehenge. No joy for all the Stone Age programmers reading this, though, because we are not going into do-it-vourself-monolith building just yet (the editor - a true paeleolithic throw-back if ever I saw one - is, however, doing the research at this very moment).

What we are going to cover instead is 'wedging' extra commands for the Vic and the 64 and extra statements for Basic

program) th memory, decodes it and then executes it. As none of de Commadan perform syntax the lines are typed in we can add extra statements which are accounts to the existing provided that we also add routine to do the decoding

execution before Basic gets he SYNTAX FREOR This is a very good argument against having syntax-checking at sitry time, of course; so all those people who boast that their nachines do something that Commodore machines don't now know why - Commodore (or

of them and throws up a

ather Microsoft, who wrote the lasic) knew better than that! Basic wedging

So how can we intercept data from the Basic program before the interpreter gets hold of it? Surely the interpreter is all in 20M and cannot be changed? Well, not all of the interpreter is in ROM. There is one very small but vitally important subroutine in RAM in zero page it is called CHRGET and it gets the next character from the Basic program. All the data read by the interpreter passes through this routine; it's in RAM so we on change it as much as we want. This is the obvious place to This is the listing of CHRGET

fir the Vic and the 64. (The subroutine is exactly the same in all Commodore machines, but at sightly different addresses) The pointer in \$7A and \$7B is called TXTPTR and points to the

involving a jump, such as GOTO GOSUB or RETURN, the interpreter just loads the of the start of t TXTPTR - so the next cha

read are those from Changing CHRGE

So how are we to change th allow us to add some extra commands? Figure 1 shows a

STAR If is nds the outine to handle from COMTAB and to that routine. al section of the

nes to carry out the extra nmands - in this case, there's ust one. HELLO

m is, of course, the Now let's look at each section then it

ation carried out to to insert a IMP instruction after the TPTR instruction at \$79 neans that every time GET is called it will jump to ECODE, so we'll look at that

The key section

DECODE, of course, is the most important part of the program as far as this article is concerned This is the section which actually allows us to add the extra commands we want

The first thing that DECODE has to do is save all the processor registers on the stack. It then looks at the return address on the stack to see where the call to CHRGET was made from. This is important extra commands when Basic is actually executing a statement, either in direct or deferred mode

if we are not careful, we will find ourselves executing the HELLO subroutine when we are keying a program line into the

Having made sure that Basic is really running, we can now look at the text to see if it matches any of the commands in the command table COMTAB. The entries in this table are in normal ASCII form, except that the last character is shifted - that is, it has \$80 added to it. This allows DECODE to detect the end of a command by using the 6802's negative flag.

DEALER ENQUIRIES WELCOME

the address of the routine minus 1 - (we'll see why we have to take 1 off the address a little later). The end of the table is marked by a byte containing zero. The section of DECODE which checks the command

name starts at DECOD? Rather than use the CMP instruction to compare the character from the command table with the one from the Basic program, I use EOR, This still sets the processor-zero flag if the two bytes are identical; but if the only difference is the top bit, it additionally leaves \$80 in the As the last character in the

command has \$80 added to it, this allows you to get a match between "o" and "O" in this case. It also allows you to use the abbreviated commands; so hE, hel, and hell, will all work as

If two characters do not match (DECOD3), the program calls FENDCM; this finds the end of a command in COMTAB by searching for a shifted character. We then skin over the jump address and test for the end of the table by testing for the next byte being a zero. If it is, then we have not found one of the extra commands, and the program restores all the 6502 registers and lets Basic get on

If the two characters are the me, the program jumps to DECOD1. This just increments the pointers (so that we can look at the next pair of characters) and then jumps back to DECD12 If the two characters differ only in the ton hit hit 7 the program goes to DECOD2 which checks if we have reached the end of the command in COMTAR If not then we have found an abbreviated command and the program has to move the pointer TMP0 to point to the end of the command

In either case, when the program reaches DECD13 we have found one of the extra commands, and the TMP0 points to the end of the command entry in COMTAB.

Up till now we have not altered TXTPTR - which is obviously important because we would want to jump back to the interpreter with TXTPTR intact if we could not find one of our commands in the Basic text. Now that we have identified a command. TXTPTR has to be moved to point to the end of the command so that later routines

All we have to do now is get the jump address from COMTAB and jump to the routine. TMP0 points to the last character in the command name, so we need to eat the Y register to 1 to read the first byte of the address using the indirect indexed addressing

As the 6502 does not have an indexed tump instruction, we have to do a little fiddle. What we do is to push the address or to the stack and then do a RTS The processor pulls the address off the stack just as though it had been put there by a JSR instruction and jumps to the routine. Remember that we stored the address-1 in COMTAB? This is because the RTS instruction adds 1 to the value it pulls off the stack before jumping to it.

The new command

And so we come to the last section, a sample extra command, executed by the routine HELLO. This simply prints a silly message on the screen and then runs into a section called ENDCOM

As its name suggests, this routine is where the program goes at the end of a command. All the routines to handle extra commands should jump here at the end. It restores the 6502 registers, then tests whether the interpreter is executing a program statement (in which case ENDCM1 jumps to CHRG01 to continue executions) or a direct statement (whereupon the program returns to Basic at

And that is it! All you have to do now is dream up your own commands. The command names are put in COMTAB, with the last character shifted (which adds \$80 to the value). followed by the address of the routine minus 1. Don't forget to put a zero byte at the end

If you do design any useful commands, why not drop us a line that tells us about it? We'l print anything that looks good ...

Seal of Approval

What's the Commodore Approved Products Scheme? by Bohdan Buciak

There's something about a seal of approval that inspires enthusiasm and attracts confidence: like the muesli bar 'approved' by Olympic runners or the Royal coat of arms on your favourite marmalade. If you've got a keen eye for such insignia, you'll have noticed that Commodore has its own stamp of approval which it emblazons benignly on specially selected products from independent suppliers.

there's more to Commodore's Approved Products Scheme merely being allowed to display the 'approved' logo. Com-lore doesn't (and can't be expected to) give something for ning. So it charges a royalty to companies taking part, and so a degree of promotional and marketing support in return: ome cases, it will actually take on a product under the Com-mo cases, it will actually take on a product under the Com-

nogore naturer.

That sounds reasonable, but how does the scheme work out in practice? What does it do for the manufacturer or software house

socies? What does it do for the manufacturer or more year, the consumer?

Camsolors introduced the Approved Products Scheme five using you been the Part originally intended for the home compacturer and the produced of the compacturer with the problem of providing loads of the home produce the problem of providing loads of positions software. Commodern began commission and positions software for the produce the pools.

Why didn't Commodern itself that the plunge into software flagly does not be the plunge into software flagly of the produce the product of the produce the produce the product of the produce the product of the produce the product of the produce the produce

Ancient history

rom the beginning, the scheme involved software houses paying

from the longituding, the echienes involved software bouses paying through included from moder's trothers calladops. The The first catalogue appeared in the Anname of 1979 and it sup-mostly highest Per beyone chosen appearate software for their technics, researced that it had commodered to be close, the technics is assumed that it had commodered to be close on produc-tion of the commodered to the commodered to be close on the commodered to the commodered to the commodered to design the commodered to the commodered to the commodered language means once promotion for suppliers with lamined PR language means once promotion for suppliers with lamined PR

Inevitably, the scheme grew in a haphazard way (Commodore It-elf grew in a haphazard way). Not all Pet orientated products were cuited for a start. Not all suppliers were convinced of the bialogue's value. And customers began to doubt (justifiably so, as furned out) that all the products really had been assessed.

Fresh impetus

Apparently that's all changed now. Enter Ian Slater – carrying a sack-lid of Presh Impetus' – when he became Commodore's Applications Marketing Manager about two years ago. (As it happens, he's sub-

equently moved on. But the expansion of the Scheme during 1983 .

and 1984 was largely his work.)
"If we were taking five per cent in royalties from these people, we ought to give them more support and back-up in other areas", he de-

clared. Sales' approach was to resump the scheme by identifying areas. Sales' approach was to resume of royaline could be most beneather of royaline could be most beneather than the country of the country of the country of the country selling the product or a joint marketing strategy with the company selling the product the company submitted application of the expensed sales and a figure for expenditure is then threshed out.

That stronder seasonably straightforward but it usually sin't both

The country of them threshed out.

The country of them threshed out.

The country of the country

Money up front

Three months from the date of signing on to the Scheme, we se a form to the company concerned to find out the volume of the prod out the company concerned to find out the volume of the product sold. We then issue a ninety-day invoice. That means that they've got six months to pay the royalty, having already received a sum up front from Commodore for joint marketing schemes.

To course, that benefitted Slater too, having seen the three-month figure, he was guaranteed a specific sum in royalites which would

The amount spent on such marketing ventures can range from as little as £1,000 to £250,000 depending on the royalties paid (the latter is the sum recently forked out with Pegasus Software for its suite of

is the sain receiving notice (on with regasts sortware for its state or accounting packages), unally flexible and depends mainly on the size and amount of market penetration the company has already achieved. Generally, factics include stalwarts like direct-mail, adver-tising, participation in Commodore shows, dealer support and over-tising, participation in Commodore shows, dealer support and

seminars and training courses.
And then there's the Approved Products Catalogue itself, the
Bible' for all things Commodore – and it really is all things. One
glance through its pages reveals a diversity of product from a computer deak to a software package for administering the Public
Unities Street Works Act (1950).

"At present, the catalogue contains about 75 different companies – 50 when I took over," said Slater. "We don't expect it to grow any more. In fact, it'll probably go down to 70 and the number of different products listed will stay at around 250."

Keeping such a large amount of entries up to date inevitably involves problems, especially if the catalogue is published only wice each year. That means a new product may not appear for some considerable time after it's received approval – a factor that will dampen enthusiasm for the scheme? Keeping up to date is a problem. But we try to overcome that by sending a list of new products out with our monthly dealer rewelleters.

Business as usual

Despite the number and range of approved products, there is nothing in the catalogue for the Vic 20 and only a small amount (right at the back) for the 64, all business stuff.

the back) for the 64, an Dussness sum.

So the dramatic advent of the Vic and 64 hasn't changed the nature of the Scheme; it is still mainly business orientated. Of course, Vic and 64 enthusiasts do have the two VicSoft catalogues, produced four times each year, but that's a mail-order scheme, not an approved

products last.

The Vic and 64 have affected the scheme indirectly, though. "The Vic and 64 horoght Commodore more downmarket, which meant that we had to pull down the price of business systems. So now were looking for more mass-market business packages to add to the scheme, Micro-Simplex for example, an accounting system for small retailers." At a mere \$150, it's far cheaper than true "business" packages. There's a great deal of software in the Catalouse that it as

cheaper than mainstream products running on vastly more expensive machines.

Getting approval

So how does a company get its product into the Approved Product Scheme? The answer's simple - with difficulty.

Scheme? The answer's simple – with difficulty.

Slater didn't see the scheme expanding in size despite the fact that
he received about 70 new products each week for assessment. Our

of that lot, only one is likely to get through.

"First of all, our technical people have to see that the product really works. The supplier has then got to prove that it is selling and that it has an established dealer distribution network; its size will obvi-

it has an established dealer distribution network; its size will obviously depend on the nature of the product.

"Lastly, the company's got to be prepared to pay the five per cent royalty on turnover—that's on the dealer price, not what the end-user

pays."

Those restrictions mean that the catalogue isn't saturated with too many similar products. As Ian Slater points out, "there's room to

about five different accounting packages, for none of them are identical—but not for 18. There's another side to the scheme; apart from getting approval, a product may be taken on by Commodore itself. But this happen very rarely—"we say no to 99 per cent of people who ask us to tak on products". That's probably because Commodore itself usually takes the initiative. "If we decide that we need a specific software.

package for Commodore, we'll go out and get it."

One such product was Easy Script, a word processing package for the 64 developed by Precision Software. The strategy here is that

HEALTHCARE FOR YOUR HARDWARE

When your Commodore 64 seems distinctly unwell it's hard to know what to do. Which is why you need 64 Doctor.

This special program will find the fault by a series of short diagnostic tests. And tell you exactly where the problem lies.

Included are tests for RAM, keyboard, disc64 DOCTOR

1 symmeth Page to the Statements

Statement of the Statement of

drive, joysticks, datacassette, printer, audio and video displays. So as well as saving you pounds in having someone check through the whole system for a fault, 64 Doctor will give you peace of mind.

You can give your system a check-up by visiting any good computer store including selected branches of Laskys, W.H.Smith and Boots.

Practicorp, Goddard Road, Whitehouse Industrial Estate, Ipswich IPI 5NP. Tel: 0473 402721

Commodore virtually buys the product, undertakes its own packaging, marketing and advertising, but pays an agreed royalty on sales bite company which developed it.

Approval from the Approved

dies (which acquires a ready-made software and peripheralb base), und for the supplier (which gets Commodors's market muscle and soft scope for its product). Does that theory work out in practice? Rigol Lovett Turner, director of Precision Software has no Joubst. "It's alloody good Scheme in principle, there's nothing to compare wit in America." On the other hand he now regrets having sold-

"At the time, we were an embryo company. So it was the right decion for us. Now we're an established software house, we reckon we suid have made a better job of marketing – but we didn't have the midding of wealth then."

eridwide muscle then."

The great advantage is that we sell in large volumes but we lose untol. Commodore gives us a small royalty; we see it as miniscule,

al,

ie an unsatisfactory deal, but also having to accept Commodore's licison to give Easy Script away as a freebie with its 1541 diskine. I view the free offer with trepidation. It devalues the product,

Strong words – but he does accept that larger volumes entail larger syables. And there's an incentive for Easy Script owners to buy Pre-

Superbase 64 is merely an Approved Product. "It's a first-class goduct which we want under our control now that we've grown and samed. The penalty is we won't sell large volumes so quickly; it will will be the undersords and the second state of t

receison merely pays Commodore the 5 per cent royany a "lights hard" for a good marketing deal. "People getting involve with Commodore must make sure they're getting a good deal." The counds like a warning.

One man band

ecision Software may no longer need Commodore's marketin uscle. But Nigel Lovett-Turner points out that the Scheme could be which to a one-man-hand operation.

Studio Software's boss, Michael Hopps, is a teacher who runs the usiness from home. He developed Designer, a screen character raphics program for his own use in schools. "Being designed for the

Despite that, Commodore took it on board as an Approved Prodty-prhaps because it offered a unique facility, which is obviously see of the things Ian Slater looks for. Designer has now sold more in 100 copies and Hopps has nothing but praise for Commodore. fley'll talk to me like a friend. They gave me access to technical copie and lent me disk drives and other persipherals. Being in the

The business back-up and general confidence from Commodo has enabled Michael Hopps to adapt Designer for the Commodo M. The machine's hi-res capability has opened up the compute

sal to has still greater ambitions for Designer 64 - he wants Cot doors to take on the product. "It would be easier for me if Common took took on tasks like marketing, artwork and disk copying," I teognises, though, that while the product is technically sound, is of mass-market enough for Commodore's liking.

COMMODORE APPLICATIONS CATALOGUE

Directional problem

That may be the Scheme's real problem; the considerations involve seem to place the emphasis on hardware and mass-market product to that the direction in which the scheme seems to be heading?

not to increase. He also felt that the Scheme came about as a stop-ga measure – "two years ago, we identified a software emphasis and outstand the scheme came about as a stop-ga measure – "two years ago, we identified a software emphasis and outstand the scheme of the

to one of Commodor's problems at the time - the need to grab a business software base quickly. Now Commodore has got around to producing its own software for the Vic and 81. That policy doesn't yet conflict with the Scheme; but even Ian Slater recognised that one

If the Approved Product Scheme gives the impression that it helps both Commodore and its independent suppliers make more

But there must also be something in it for the user, "The user gets the assurance that Commodore has seen and assessed the product, and that the product has established itself in its field," assured Slater. But he quickly added: "there's no come-back to Commodors if the product doesn't work.

The Commodore 64 Program Book

The Book:

The Author: The Publisher: Price: The Reviewer: The Conclusion:

Vince Apps £4.95 Dermot Williams 25 programs of modest standard for the prices of one commercial tape ...

is claims to be "THE Commodore 64 Program Book, with mething for everyone ... a blockbustling collection." Will, for the reasonable price of 45.5 the 122-per portion per personal period of 45.5 the 122-per program to type in. They range from venture games, wraced games, and a fighly simulator to lifes, an educational Capital Cities quit and a machine be-lified and the commod the period of the commod the collection of the sembler disassembler. The forward tells us why "we wrote unable disassembler. The forward balls as why "se" wrote the doc sincer when the programmers use the royal places? The format of each program is sensible a brief description of air does, how to use it, line by him less of graphes of the control of the control of the control of disects for lit's and finally the program itself, disreped ested to a Commodore printer or to blance a wrise choice, ministry like possibility of printer errors though at the expense mess legislating and the use of the Commodore control code. M some legibility and the use of the Commodore Council isroglyphics.

The programs fall into logical batches. First are the two
forbidden City and Pharoah's Curse. A

in registrate set into Sociales descende First are the two freeture genes – forbidden Ory and Pharosh's Curre. Although my take input only in the simple verbroom format they do have useful save-gene feature for when you have to surrender the mily TV set You can then reload the data when you next com-ply and continued from when below the data when you next come play and continued from when the data when you next come play and continued to the continued of the continued of the properties of the continued of the continued of the continued of the freeture in less time than it took to type in – they are by far the most structures in the book.

sames in least time than it took to type in. they are by set in en programs in the board to bear that there is the used as paintening the board to be the three is the used a plaintenin of accade type games. These includes such spiritured of accade type games. These includes such spiritured and the set in the set in the set in the set in strict abuses are all used . Here games simply all four. The didn't do the off- painten, though it is explained for far more these programs salved of it. Also, being in Basic, some these programs alread of a contraction of the set of paintening and the contractions. Sparing Capitals is every simply—"assent the entry games.

some were panning soow.
Another 'game' is Capitals, a very simple 'name the city' game it anyone could write within a few weeks of beginning to organs. Similarly simple programs were Metric Converter, heque Book and Brany to Decimal Converter. A rather aspointing line-renumber program was given—it does not similar OOTOs or GOSUBs, so thoughts of being spared the bottoms task of manual renumbering are dashed.

Anagram is a simple program which jumbles up the letters of ords held in DATA statements and prompts the user to guess that the word should be. Instructions for expanding the ocabulary are included, though the data in the program as it monthsizes are seclated, though the data in the program as it materials in large and started. Obviously presents could add a samples list of words to years collisions on which will also amples list of words to year collisions on the missible Mores Code is a useful program which will transmit other a smaller of random letters, a word choses from its vocabulary at large like program in all as sampleors. I must admit rather thing this program in all as sampleors. Last, there's a useful utility amply called Machine Code which the started of the sample collisions of the sample collisions of the sample collisions of the sampleon particular words have been an excellent program. In the few for The most important of these is the fact that if does not use anticated missibility immediates the program employs an accurate three letters (i.e. LDA ACC) must be followed by the storms in the sampleon of the sample

That infer enters (i.e. LDA ALC.) must be followed by the trets lM if the operand is immediate (i.e. LDA #\$\$C.) Z if Zero ge is to be used and X.Y.ZX or ZY if the operation is to be dexed with the X or Y register. And there's more - the ogram operates in decimal, not hex, so LDA\$22,Y would ogram operates in de come LDAZY 34!

Decome LAPAT 34: Anybody who knows 6502/6510 mnemonics will have great difficulty in adapting this system. For those brave enough to do so though, it offers use of (one-letter) labels; and a short sample program is given which shifts the screen one place to the left.

program is green watch when his second was passed on a some program of the program of the program of the program of the spect them to be. I think the most accusate description I as give of the programs is magazine standard — that is, less than commercial quality but nevertheless worth having, the commercial program is qued value, and somehood poly learning programming could take them apart one by one to reach a good understanding of many lessic concepts.

The Personal Computer Handbook

BOOKLOOK

The Book

30014 10014

General books on home computing are usually written from a standard ncipe: a potted history of the computer and a simple description of the way it works. Sometimes a few more ingredients are sprinkled around to nake the book worthwhile. The Personal Computer Handbook, not surprisingly, has been cooked up

a much the same way. But Peter Rodwell, its author, has tried to be more complete and more practical: and so he should - he's the last editor but one of Personal Computer World magazine. So has this more exhaustive approach

The book's outward appearance alone encourages you to breeze through Did how to compute. It's a large book (about the size of a Beano annual); and

The chapters, or 'modules' as the author prefers to call them (vukf), are colour-coded and self-contained so you can dip into any part at leisure. You're

Another clever and useful feature is the way main text is kept separate from the illustrations and their captions. The captions generally expand on the text so you could speed along or stop and take advantage of the greater depth

But the book does have an overall structure; it falls neatly into six parts each with an Introduction that skims over the main issues. That may not be useful to computer buffs but the history of computing it contains certainly is worth spasse. It's concise and has some marvellous photos - like the one of Charles Sabbage's Difference Engine, that improbable and ultimately useless pile of ogs. All the great computer intellects are here, most of them with funny sames - like Hollerith, Scheutz and Vannevar Bush.

The section on how computers work will be equally gripping for the inquistive. Again, it uses illustrations to add substantially to our understanding. Thike many explanations of a computer's innards, this one doesn't attempt ugloss over difficult concepts. They remain difficult - logic gates, the central processor, binary, memory et al. All are discussed with a clarity and precision

The same goes for the modules on hardware and software. If you couldn't visualise the complexity of a Z80 chip say, you'll see it emploded to the size a lot of cutaway drawings so you can 'see' inside a diskdrive or a cartridge

A real practical section is the one on Basic programming. It gives not only the more experienced, there's a discussion of more advanced languages like Pascal, C, Logo, Forth and examples of the type of programs they produce. The same goes for operating systems; Rodwell answers those nagging quesoperating systems are better than others.

Those are the plus points, but there are a few dubious areas in this book Why devote a chapter to the basics of setting up a computer when the machine's manual would surely cover those points - and do so more specifically, too? (Incidentally, Rodwell uses the Sinclair Spectrum as an example

Neither are there any real revelations in the section supposedly devoted to the future of computers - a great deal of time is spent talking about seeming irrelevancies like video and compact disks. The section on choosing a com-

are already out of date. Such is the nature of computing; but Peter Rodwell of all people should know that if this book is to have lasting value, better stick

Learning about computers is a process of stripping away darkness. But there are always some niggling black patches that remain. Rodwell tries

to give a rounded picture, and succeeds very well. His style is lucid perhaps a little dry, but the copious illustrations make up for that. Some sections, though, amount to mere padding. Others, like the descriptions of applications software for business, may be relevant to only

a few readers. But maybe that's the price you pay for completeness Moneywise, the price you pay looks a bit high for an all-purpose in troduction. It's buying some very good presentation, layout and illustration: and on balance, it's worth paying for.

The Commodore 64 Handbook

The Book

The Publisher: The Price: The Reviewer: The Conclusion The Commodore 64 Handbook Peter Lupton and Frazer Robinson Century Publishing Co

£5.95 Simon Potter Not a handbook, but an

If you were writing a book about the 64, yeve's almost certainly call it 'Getting the most from the 64' or 'The 64 Bandbook'. That at least seems to be the obvious conclusion from the Bood of Commodore books hurtling like lemnings from the world's publishers. There are so many, in fact, that the average punter could well be forgiven for ignoring the claims

Book jacket blurbs and titles are becoming debased: you jorow full well that the book probably won't help you 'get the most from' your 64, or it won't be an all-you-need-to-know 'handbook'; instead if'll be another supplement to the 64's manual introducing the 64 and exampling or those bits the manual.

glosses over.

The best you can hope for is that it will give you some extra information, or that it will help you quickly to locate some fact you need, or that it will demonstrate the use of the 64 and the commands available (a tenner to anyone who can tell me bow, why, when they dere to give WAIT).

And so to The Commodore 64 Handbook, Now, let's be viciously literal. A handbook if seems to me should be a handy compendium: it should tell you all you might want to know (and I do mean all), and it should do so in a useful and useable fashion.

Better to the Messers Lugion and Tall and They're written yet colors became a few for Messers buyen for the first upone at finite the first the messal, as such its note is do by A. bit melson in a state and one particularly levely in the colors and the second of the s

In the order and of the book are the usual appendices, most of them apparently reprinted en masse from the 64 manual. Which you'll have with your of the work of the same of t

More crucially, the book has two significant deficiencies as a handhoo The authors simply savent presented their information in an easy-to-use ference form (though and-of-chapter nummaries and a decent index do reresent a nod in that direction). They haven't covered everything – noth about disks and primters, for instance, nothing about oft-the-shelf packag

constitute what they do not execute in the extense (SID and SID AND SI

What worse, the book falls into the style 45 on many 64 books. Most off the examples are mathematical and immay are positive, such there must be better way of illustrating loops and decisions than a long program that porturbers into ascending order 67 which leads on to amplor criticism: like not 64 books, this one tells you a lot about Basic commands without explains bow, why and where you sight arturally want to use them.

The authors can't have it both ways: either the book is a reference han book or it's a beginner's introduction. It succeeds as neither. As an intro the 64, it's networse and no better than a dozen alternatives: good sector

Get the idea? Well, don't bother getting the book – not if you want to use it as a genuine handbook. As an intro, it'll do as well as any until something really good comes along ...

Saxon Computing FIGARO & C commodore 64

Much more than a business graphics peckage or spreadsheet, FIGARO 64 is a powerful numeric database system for maintaining files of numbers and their intaining files of numbers and their scriptive data, plus hi-res graphics and se show option. Picking on Paramount

Bright ideas and bushy tails versus the money machine by Bohdan Buciak

Paramount still thinks it can make a splash before the tide goes out It is majoring on Commodore machines, has a small range of good games and has acquired the obligatory teenage-genius programmer. With that lot, it confidently expects to turn over £1 million in its first year. Bohdan Buciak trekked to Teeside for a chat

with Paramount's protagonists. Paramount lives in a modest row of terraced shops in the modest town of Stockton-on-Tees. Across the road is the railway station from which Stephenson's Rocket used to trundle up the tracks to Darlington - Stockton is

But Bob Horsham and John Chapman, Paramount's joint founders, aren't Stockton men; they're both from Yorkshire, and in the true brass-from-muck tradition they both describe themselves as entrepreneurs of

"My whole experience is in marketing and promotion promoting people." The middleaged Horsham reels off a list of areas he's worked in: iewelry and bullion, discos and clubs. Perhans not the best pedigree on which to enter the specialised and often cut-throat software

Chapman to the rescue: "But we're both natural businessmen and we know that if there's room for one there's room for another" That sounds pretty casual but a good deal of preliminary research was done, mainly by Bob Horsham ("I was weren't going too well for me in business"). Horsham found himself with plenty of spare time to look for new areas in which to exercise his promotional skills. "The idea of computers began to hook me and I knew there was an opportunity there ... if only I

Promotional ideas

He thinks he did find it, his idea being to promote games programmers as personalities: "I reckoned you could have an Elvis Presley of leisure software programming." (Horsham prefers 'leisure' to 'games' software - but more about that later.) "It was difficult to get my concept of promoting programmers over at the time - and John Chapman thought I was crazy." Of course. it's easier to swallow those ideas now that the likes of Geoff Minter and Eugene Evans have reached cult-firming status.

At the same time Horsham bought a Vic and then a 64; and he decided those were the best machines to write for - perhaps not from the technical viewpoint. but certainly in terms of selling

Horsham and Chapman duly combined forces and moved to Stockton where the latter had most of his business interests. But that wasn't their main reason for settling on Teeside: "We knew that Teeside Polytechnic had a good reputation for turning out computer people and the area was totally unexploited. So we placed advertisements for ogrammers in the local press."

They formed Workstations, a consultancy operation that arranged for ghost-writers to work for already established

software houses. It seemed natural from there to go one step further and form a software house of their own. "We chose to call it 'Paramount' - sounded suitably impressive."

Setting up Paramount enabled Bob Horsham to pursue his dream of promoting and managing a genius progr "we interviewed a lot of people". Most were youngsters who. according to Horsham, wouldn't or couldn't fit in with his plans: "I wanted an old head on young

shoulders, somebody who could be successfully managed". A star is horn

Paramount eventually found three looked to Horsham to have star potential - a sixteen-year-old school leaver with the unlikely

name of Iason Benham. lason started work on the Vic and produced Outback an original yet somewhat bizarre game featuring the likes of swagmen and kangaroos. That was Paramount's first product - it appeared last November. Since then, Iason has written Jogger (a 'Frogger' clone for keep-fit enthusiasts that seems to sell despite the longevity of the basic idea) and Chocabloc, also for the Vic. For the 64, he's converted Outback and written Megawarz That amounts to all but one of Paramount's current title range

lason had to accustom himself to Paramount's ways of working. His first version of Outback wasn't accepted straight away Both Horsham and Chapman made suggestions which, fortunately, lason was able to implement himself. Countdown (the only Commodore game lason hasn't written) was different; the teenager who'd originally submitted the program

couldn't revamp it himself That was where the technical expertise available at Teeside Poly came in. "We employ computer scientists on a freelance basis to modify programs and give advice," says Horsham. So why don't these people write their own

just what the world needs, another games company. Paramount Software is pretty small and pretty young compared with the giants of the games software industry, who sarted shovelling out games and shovelling in the money a long time ago (which means all of two or three years). Now, the games market is reaching saturation point and it looks as though only the large concerns with the financial muscle will come out winners – money matters like 'distribution' and 'marketing' count more than the quality of games in this business.

programs? "Computer scientists

line a lot of routines but don't und to have finished put organas." What he is saying to that the positions usually have for the organizers usually have organized concepts, the creativity; but they may lack the technical shirty, the logic or even the pennes to turn that idea into a yood game. And equally, that the established computer professional may be able to do it opts - but lacks the original dess.

Faramount is keen for local youngsters to come in and get fles work assessed. It's now making alterations to its modest offices to accommodate them. But tids aren't given the opportunity in discuss their work with uchical experts. "We can't send idea waye with development disas because that's chucking saye your commencial secrets", coffices Chapman.
That's followed by "We find

they don't get on anyway - kids dan seem to be motivated by the really technical stuff. That may or may not be true. Yougsters could certainly benefit from talking to the sperts. But there is a premium originality in the software distry. Letting secrets go is lab business - even if it does sund a little callors.

So the premise is that the youngers will have the kernel of an idea and Paramount will my to mould it. "We know what we want the finished product to be lat not how to do it. Sometimes e make demands that scheincally can't be met. But n's always a team effort." Jason has probably experienced that way dwcking more than most.

Rich pickings

No Horsham has strong views in that team-spirit idea. "I can sally work with people who are wling to be managed, with shom we can work towards a

common aim on a long-term basis" (that aim is obviously wealth for all concerned). It might sound as though

Horsham's interested only in people who will do as they're told. He denies that strongly and points to the othen deluded getrich-quick visions youngsters seem to have about the games software industry. He's probably trying to be more cautious when he makes the admenistion, "you don't make a fortune overnight". Even if some people demonstrably have done just

that. So what kind of money do programmers make at praramount? The company generally employs them on a freelance basis and they receive only a royally on sales. That lies between 10 and 20 per cent, depending on how much development was done by Paramount on the criginal idea. Jeano, being the company's white-lod, is paid a fee: but he's not roilling in morey.

So Jason's had to put aside ideas (if he ever had them) of quick bucks on the Eugene Evans scale: He probably works hard and has to undergo the additional strain of changing from the Vic to the 64. That was the make-or-break period of our relationship," remembers Horsham. "We tried to give him a lot of backing and spent a great deal of time at his house." While lason was strugolino

with the 64 version of Outback, Horsham suggested he take a break and work on something else. That was how Megawarar version of those spaceship sapping games, And like Jason's other games, it has received good reviews in the computer press: it's also become Paramount's best-selling product with sales of 60,000 expected by the end of April.

Getting noticed

A string of good reviews have doubtless been a boon to Paramount. But despite Jason's talent, if those games don't appear in the shops the customer won't be able to buy them and Paramount makes no money. But there's the paradox that dealers won't stock you unless somebody else is stocking you. So how does a small company get itself noticed and its products on the High Street?

One answer for Paramount might have been mail-order. But Horsham recognises that the bottom has fallen out of that and so has customer confidence. Too many software houses in the past have forgotten to meet their

customers' orders.

In any case, you don't sell many games that way. And he wants to sell a lot of games. So Horsham has a sales force of three; they travel the country visiting as many dealers as possible. That's backed up with an advertising campaign in the computer press.

"At the beginning, we got the usual 'what, another one?" response from dealers. But when they actually see our products demonstrated, they invariably stock them."

With stocks in plenty of dealers' shops, Horsham was armed with more clout with which to contact distributors and

some of the national chain-stores of course, that's where the big size start distributors buy in bid and quarantee to get your upes into a large number of stope - on a national basis. Schhop, Pilonnist and Westers now distribute us. We's in Boots and Menzies too, bit to get there, we had to bushard them with reviews, lietatize and reports from continuers."

There's a price to be paid for sling in bulk to chain-store or b distributors. Both expect large discounts, the latter taking as much as 50 to 60 per cent of the upe's retail price.

Paramount's games are selling wil. But both Horsham and Cunman realise that to be siccessful, their games must continue to be original; and they nust push further towards the computer's technical limits. We're constantly looking at other people's games, especially hase new on the market, to usess the State of the Art." Horsham says that recent games offerings from large concerns have left him cold - "Taskset is the only other software house we're watching closely". That company happens to specialise n games for the 64 (Super Pipeline and Jammin' now appear at the top of the 64 pop-lists).

Developments

Paramount is characteristically capey about its new games developments. Apart from acquiring someone to rewrite eristing games for other machines, the Spectrum in particular, it's looking for what Chapman calls "vastly more complex games." What that amounts to be is loathe to reveal except: "we're developing a Commodore 64 game that uses 4% about 7K more than the machine's useable RAM, by setting into its dark corners". loading such a lengthy game from tape will probably tax your patience. So providing games on foppy disk, as the likes of Isis Hattor and Audiogenic are already doing, may be a good (and necessary) idea? "At present it costs more and we'd have to pass that on to the

customer. But we will be manufacturing disk-based games by the end of this year."

by the end of this year."

Will the games market in its present form last that long? Both Horsham and Chapman have strong views on that: "Leisurse time is going to increase," olserves Chapman (he doesn't like the word 'unemployment')

so far, and it's not worth selling on the basis we've seen. It will take us a long time to dig our and produce our own. And, at present, we just haven't got the time." It's a matter of priorities; Horsham would rather open up overseas sales of existing products than diversify into unchastreed waters.

"and people will require something to do that is not only leisure but constructive". That's why they prefer "leisure" to 'games' as a description for their wares.

Over to Horsham: "We realize that the market is diversifying into home and educational software. But we're not impressed with what's available Whatever the software, though, Practical and 48 at its main machines—and probably with a Vic. and 64 at its main machines—and probably with any finure machines Concomdore decides to learnth. The Vic is already because in the vice of t

produce games for the Vic because it's got such a large user base." And the 64? "It's aboutely first class – ideal for what we want."

Master plan

And what Paramount wants, according to Horsham, is to be in the business of winners. Unlike the rest, we don't produce one good game and a load of bad ongs. We have only eight games and they've all good. Which is for you, the customer, to decide But what he's saying is that off you, the quality rather than quantity makes before business seems.

Horsham's idea of winning is linked to his idea of promoting and managing personalities. "Two or three of our programmers will become Big Names – one of them will be Jason Benham. He knows that everything we said would happen has happened." Not to surprising since Horsham now manages lason's affairs

personally.

"As of now", he enthuses,
"Jason will be getting gradual
and co-ordinated exposure in the
media as a whole; in magazines,
radio and ultimately on
television". But is Jason ready for
the likes of Terry Wogan? And
what will he actually do under
the bright lights? Horsham has no
doubts on either count.

"We don't want to push him out too soon. So we've gradually involved him in a pseudo-social life and people have noticed that he's coming out of his shell. Outhack and Magnawar have also given him a great deal of confidence. You can't promote a gry unless he's going to be able to do something—we see Jason contributing to computer magnatimes, and computer magnatimes, and computer of the computer of the confidence of the computer of the compute

In the short space of time Paramount has existed Horsham has laid the foundations for his Plan and he's confident that the youthful Iason Benham will fulfill the promises made to him. "Iason's got the ability to understand exactly what I'm after: he has the original concepts but he can also listen to what I'm saying. As a result, he's achieved what I consider to be the ultimate in programming. So Jason's future stardom is assured? In any case, whatever the success he grabs, it looks as though he'll achieve it the Horsham way.

Basic Style - Program Evolution

by Jim Butterfield

Sometimes you see programs that are so crisp and neat that you wonder how the programmer's mind can be so orderly. The code comes out in an elegant incisive style. Every line zeros in on exactly the right thing to do.

How does a programmer develop such a style? Why can't you write like that? Sometimes a lowly hacker can feel inferior when facing such immaculate programming style. Yet the code you see is often a matter of evolution - rewriting and tidving up. It's not always written that way from the beginning.

I have been accused of writing 'squeaky clean' programs. It seems to me that you might like to see how my mirky first programs get reworked and tightened up into their final version. It seems to me that in some ways, programming style isn't what you write (at least at first) - it's knowing what to look for when you clean up.

I need to do an almost trivial job - list a file from disk to the

Taskset & commodore

We're only writing games, and we're only writing for the 84. Rely on us to bring you the greatest games, the greatest concepts and the greatest value.

The complete deep space saga. A radical joystick action can bring inspired flexibility and a horrific kill-rate. The outstanding graphics include highly detailed craft and lots more than eight sprites at once. A full music and effects sound track

accompanies the action. All these features combine with player options and a top 20 hiscore table to set new standards in hi-tech slaughter.

A brand new character game. Poor old Bozo, all he has to do is to get home after a night out with the lads. That's easy until a wobble becomes a lurch and a stagger. Later into the night, all rules go out of the window as he disbelieves what's happening in front of his blood-shot eyes. An epic journey with ultrasmooth graphics and sprites which run rings round normal games.

SUPER PIPELINE

Keep the pipeline open. Foreman Fred and Plumber Pete have their work cut out. The evil ladderman drops metal wedges to plug the pipeline - and only Pete can fix 'em. Pete trusts red to defend him against the six-legged

IAMMIN'

Unlike anything else, a totally musical game yet highly colourful. Guide Rankin' Rodney through band but watch out for burn-notes, dischord and that most deadly effect - distortion. If you've grab an instrument and join the band.

190 GOSUB 500:GOTO 250
250 IF SW<>0 GOTO 300
260 IF L=0 GOTO 110
```

Digging deeper

270 GOTO 150 300 IF L<>0 GOTO 190

310 CLOSE 1

Around lines 250 to 270, we jump around a lot we have one imp forward to 300 and two jumps back to 110 or 150. The logic seems scattered.

I have a thing about loops: I like to see them neatly nested, with short jumps entirely within longer jumps. It might even be summarized as a rule-of-thumb: where possible, make

Using this rule, I want to get the loop back to 150 into logical order first. Then we'll work in the longer loop to 110, and finally the forward branch to 300. We'll need to expand the logic using an AND operator, but that's not too

As the coding is written, certain logical things start to fall together. For example, we don't have to GOTO forward to line 300 ... when we're finished writing the two loops, we'll fall into 300 naturally. ('Naturally' seems to be a key word in how programs seem to come together as you tighten them

We can also tighten up the page eject conditions. If we write line 180 correctly, there will be no need to go back to get a page ejection. One option would call the subroutine at 500 twice. But if we think of what our objective really is at line 180, we can do it all correctly the first time through Inverting the logic and adding an OR connective does the trick nicely. Look at how far the original program has come:

```
100 OPEN 4.4
105 OPEN 1.8,3,"CONTROL"
110 REM start of page
120 FOR J=1 TO 2:PRINT#4:L=L+1:NEXT J
130 PRINT#4."
                      ":L=L+1
             title
140 PRINT#4:L=L+1
150 INPUT#1.AS:SW=ST
170 PRINT#4,A$:L=L+1
180 IF L>61 OR SW<>0 THEN GOSUB 500
250 IF SW=0 and L>0 GOTO 150
260 IF SW=0 GOTO 110
```

310 CLOSE 1 320 CLOSE 4

330 END 500 FOR J=L TO 66:PRINT#4:NEXT J

510 L=0:RETURN

This is pleasing ... but we can do even more. The repeated SW=0 test in lines 250 and 260 still irks a little: it seems clumsv. The whole business is tied up with whether to print a title or not. Is there a better way? Could the test of L>0 be somehow shuttled

While we're thinking about it, the whole business of printing a header is really a module - we must do the whole thing, title and all, or nothing. If we move it out to a subroutine, we might see the logic flow more clearly. Let's do it and work on the logic flow. We end up with this:

```
110 IF L=0 THEN GOSUB 600
150 INPUT#1.AS:SW=ST
170 PRINT#4.AS:L=L+1
180 IF L>61 OR SW<>0 THEN GOSUB 500
260 IF SW=0 GOTO 110
```

310 CLOSE 1 320 CLOSE 4 330 END

105 OPEN 183 "CONTROL"

500 FOR J=L TO 66:PRINT#4:NEXT J 510 L=0-RETURN 600 FOR I=1 TO 2:PRINT#4:L=L+1:NEXT I

610 PRINT#4." title ":L=L+1 620 PRINT#4-L=L+1

630 PETURN

100 OPEN 4.3

Look at the main code from lines 100 to 330. It now seems tight

Both subroutines - at lines 500 and 600 - are called only once. If it seems important, we could put them back into the main coding stream. But I'm happy to see them as clearly isolated modules. At this stage I would add comments (line 499: REM PAGE EJECT and line \$99: REM TITLE PAGE) to neaten things up

First what you see published is not always the first coding idea that popped into the author's head. The programmer is not always smarter than you. But more time has been taken grooming the program into its final shape. When many people are going to read your code, you like to take a few extra pains with its

Second: don't be afraid to revise your programs, even if they work correctly. Sure, a one-shot program often doesn't warrant picking over, use it and forget it. But sometimes the exercise can reveal - almost accidently - powerful and effective ways of

Third: - 'style' isn't an inborn talent that some people have and some don't. You learn it as you go. Some things you will discover for yourself, and others you'll pick up by looking at other people's

The odd thing is that we instinctively recognize better coding when we have written it. You may not know exactly why, but you often feel good about a certain piece of programming. Usually, it's because it has 'style'. But remember that style isn't a matter of luck. You can get it by working for it.

TOMMY'S TI

Tommy is Commodore User's resident know-all. Each month he burrows through a mountain of readers' mail and emerges with a handful of choice queries. The result, before you. is a wadae of priceless information and indispensable advice. There's even the odd useful

Dear Tommy, I am at the end of my tether. It seems that I am istally unable to get an answer from Commeders to my problem I have a Vic-20 and a Brother CESO Electronic Daisywheel Typewriter plus its IF50 interface and its CA50-5 cable set (the machine accepts RS232

or Centronics). The lead has a D-type 25-pin plug; the Vic does not. How do I use the Vic-M in RS232 to drive my word processing equipment? Why den't Commodore tell us more shout the RS232 of the Vic. or is it all a filthy lie?

Before you can connect a printer to the Vic using an RS232 link, you need an RS232 adapter for the Vic. Surprised? Well, the Vic does not sally have an RS232 port - it's socalled "RS232" port is softwaresome extra hardware to convert the Vic's signals to the different solage range required.

Stack (among others) does a buying one of these means your problems have now only just garted - because very few hardware manufacturers implement the cept for full communications derices like modems. Instead, each company takes what it considers to be a reasonable subset of the standard. The result? Trying to connect two different devices, each using a different subset of full RS232, can be an absolute nightmare.

In addition, some printers use special characters sent up and down the line to tell the computer when they are unable to accept any nore data (printers are very much slower than computers and so the slow the printer to catch up). Now, the cable you already have nay well work; if not, hopefully, the interface manufacturer may be able to give you the required connections if you can send him the details of the Brother Interface. But don't expect it to work first time. unless you can find somebody else who has successfully connected the same printer to a Vic. It can take even an expert some fiddling erly, and trying to do it by post is

Dear Tommy, The display on my 64 is flickering whenever the computer is parked in an INPUT or a WAIT or similar endless loop. Small twinkles appear around characters like 'D', E' and 'F', although the rest appear normal. But if the character set is moved to RAM. all characters appear normal and without flicker. What could be the cause of that?

The 64 also seems to have a strange bug. Press both cursor control keys permanently and than press the left-hand shift key. You should then be able to observe some spades on the screen, if yours has the same

The first problem sounds like a hardware fault, but it is very difficult to think of a cause without having the machine look at. It sounds as though maybe the character generator is borderline. It is unlikely to be a serious problem

Your second point is something I had not noticed before - presumably it is something to do with the keyboard decoding on the 64. special characters sent up and down the line to tell the computer when they are unable to accept any more data (printers are very much slower than computers and so the Vic needs to stop every so often to

allow the printer to catch up). Now, the cable you already have may well work; if not, hopefully, the interface manufacturer may be able to give you the required connections if you can send him the details of the Brother Interface. But don't expect it to work first time, who has successfully connected the same printer to a Vic. It can take even an expert some fiddling to get an RS232 link working prop much more difficult

Dear Tommy I have been trying to write a 'Monopoly' program for my 16K Vic. The information about each street, rent, price of houses etc. is stored in DATA statements for example:

10 DATA 200 0 0 0 0 0 0 0 GO DATA 0 2 10 30 90 160 250 50. OLD

KENT RD These lines are perfectly legal as far as I can see, but when I

run the line . 1000 READ D(T),P1(T),P2(T),P3(T),P4(T) PS/D PS/D SS/D

I get a SYNTAX ERROR. Why? Now for something completely different When I run the following program a STRING TOO LONG ERROR IN 20 is detected, even when the string length is only one character

long: 10 OPEN 1,1,0,"DATA" 20 INPUT#1.HE.SE,TE,CE.TLE 30 CLOSEI This has puzzled me: the manual

says the maximum string length is 255 characters. And finally, can you tell me the machine code instructions needed to find a random

number?

The SYNTAX ERROR in a DATA statement is caused by trying to READ a character value into a numeric variable. The lines in your letter look all right: but are you sure you haven't got a letter 'O' instead of a digit '0' somewhere? It is very easy to miss out one value in a string of DATA items, so that the READ statement comes to an alpha character while it is still looking for a numeric one

The maximum length which can be assigned to a string is indeed 255 characters, but the maximum length which can be INPUT is only 80. If you are inputting several values with one INPUT statement, each value in the record must be senarated on the tape by a comma. A typical line to write this data

100 PRINT AS,",",BS,",",CS To produce a random number in

assembly language use one of the following calls as necessary: JSR E09B equivalent to RND(0) ISR E0BB equivalent to RND(1) ISR E0D0 equivalent to RND(-1)

In each case the random number in the range 0 to 1 is left in normal floating point form from \$8B to \$8F.

Dear Tommy, Could you please tell me if it is possible to get programs written on the Vic to run on the 64. I am considering upgrading to a 64 and I am wondering whether I could adapt the programs I have written on the Vic without too much difficulty.

It all depends upon how you have written them. Basic programs should run without too much trouble (provided you have not filled them with PEEKs and POKEs) because the two Basics are identical. The major change here is to accompdate the fact that the 64 has a 40-column screen, so you will want to alter your screen displays to make them look nice with a different format.

It is the PEEKs and POKEs which, as always, cause the probleme Fortunately Commodore have gone to some lengths to make your job as easy as possible here. POKEs into locations below 1024 are likely to be unchanged. The screen memory now starts at 1024. and the corresponding colour area

The procedures for high-resolution graphics and sound have changed completely, though, soyou will have to look up the articles in Commodore User dealing with those: but as the 64 is so much more powerful in these respects you would probably want to modify your programs anyway.

This is your page normally we write for you, but here we listen. Feel free to let us know what you think—about the magazine, about Commodore, about suppliers, about life, art, the meaning of existence or whatever. We don't print everything we receive, of course, but anything that might be of specific relevance or general interest will make it to these pages.

About ANIK

In your February issue you carry an advertisement for Anik Microsystems Software; the advert says your games will be sent within 48 hours. I think you would like how that in answer to a similar advertisement I ordered Yahtoee on 10 October 1983. I see from my bank statement the cheque was cashed on 14 October.

caused of a Percentage of the Conference of the

It is now nearly five months and my letter and telephone calls have been ignored.

I think you should know that the advertisement your magazine is carrying only results in people losing money instead of receiving the goods they ordered.

R.A. Riste, 43 Easter Road, Kinloss, Forres, Morayshire IV36 0FG

This is only one of a number of letters we've received about Anils. Reluctant to condemn anyone without giving the chance to respond, we have been trying to get in touch with is company by letter and phone for two months – with no effect.

We are not accepting any further advertisements from this company. We advise you not to send it any money. And

anyone who has lost money by ordering games from Ænik is recommended to drop into a Clitzens' Ædvice Bureau and ask about Small Claims in the County Court – a cheap and easy way of taking a defaulting supplier to litigation.

Devaluation

I read with interest W.J. Howard's remarks concerning the devaluation of his Vic and your reply.

I bought my Vic in January 1983

I bought my Vic in Jamany 1983 after reading your December 1982 article which had influenced me a great deal. I had feit that with the possibility of this (now mythical) offer I shouldn't lose much. I went on to buy all Vic expansion — including expansion board and printer—feeling that if a company was prepared to consider its customers they had a right to further to further the content of the

My naiveré has been a linte coestly on my pocket and I now fint to try to seil entails almost giving it away. My decision is to hang on to it and save for a different make of machine: I shall certainly not buy Commodore products again. Its sales tactics over the Vichave left much to be desired to the vicinity of the commodore of the vicinity of the

My attitude to your mag over this experience was also wary and experience was also wary and when it became more and more felinh I began to grown and decided enough, was enough; however this somewhat and I am digging into my well-worn procket to see if I can find enough pennies to make up the control of th

Which brings me cost the requent is it possible to review meequent is it possible to review meeuseful software than the multindincous games? Or better till, as well as? have at present the Home Office word processor which for its price is great value: however, I could do with something more sophisticated. I would also like a spreadshest. I realise that what I am after are business applications, is three any hope for my infler machine? (Should you have covered this last request my apologies for while I was dithering on whether to renew or not torenew I missed several copies.)

Oh, just to round off, can anyone tell me why when using the Home Office with the 1828 printer does the whole shebang hang up on me on the second copy? It happens usually after making amendments to the master copy and justifying

Mrs V Yates, BFPO

Dear old USA

Being completely new to computing I rely heavily on reviews of games software before making a final choice for my 64. After trying various mags I have settled for buying Commodore User regularly, so could we please have more games reviews?

Now to the real reason. I'm writing, Some software houses are advertising. Some software houses are advertising. American games software. What is identified me is why the games are so expensive. They reasons entitled from 200 to 560 per casestee. Why? Is it because their games are far superior to our own. British games are far superior to our own. British games, or more complicated How do you know what you know what you know what you will not so the some are view of any American game. If or one would never part with so much moneys to find our least the source of the sou

So could you please explain the reason behind such high pricing of games software from the USA?

M.J. Wiles, 197 Henllys Way, Coedeva, Cwmbran, Gwent, South Wales NP44 7LB Suppliers tend to attribute the

Suppliers tend to attribute the price vagaries to import duties, the risk of baying large the risk of baying large that the risk your grade plans. But determiny your grade plans and the risk your grade plans and the risk your grade plans and the risk part of the risk part

Simply good sense

I don't ask you to print this further correction to the review and subsequent comments and I don't want to upset a reviewer who will, we hope, review more of our products in time to come but I do feel that your heading and thou Durham's reply to my letter in the February issue imply that I am a liar. I am not happy about that. Chris Durham's "I now Christians".

number of changes, some of which

are additional calls on the error checking contradiction of my letter and a blatant mis-statement of fact. If you are going to allow your own staff to have the last word in such a matter. then you have a responsibility to see that what they say is not derogatory or misleading. In fact, the only change made in the error checking in the correct version sent after the review was that an 'IF DN<>4 THEN, which had somehow been lost in the particular master used, was replaced WITHIN the error routine before a RETURN. I enclose a letter from one of our many satisfied customers which confirms that the error checking already existed in the program, and that he was surprised to see your misleading

while I applaud the editorial independence that keeps reviews, and advertising distinct in, the majority of British magazines, I do feel that it would be a good idea if you were to check your conclusions with the producers of the goods before publication. After all, quite apart from the relatively and cookietin such as this when a bad copy is received, it is a rapidly before the production such as this when a contract the contract of the cont

changing market. tweaks and improvements are made to software by companies trying to give their customers good value and one frequently sees products slated for shortcomings which have already been put right, or for not having some feature which has been added since the review copies went out. Also this lack of communication with the supplier regarding problems is quite uncharacteristic of the in, as borne out by the second customer letter attached. I should add that this customer's problem is after some years of using our enfrware and has only arisen on his changing equipment

Genuine user reviews would also be a decided step in the right direction. We get very irritated by reviews of programs (not just our programs() in which the reviewer complains that the program does not have this or that nice feature found in some other program, or has only ten thousand variations instead of the ten thousand three hundred and seventy one of program X. Specialists seem to find it hard to understand that there are many users who want fewer features, not more, as long as they are based on a set of compromises. and few magazines take into account whether a program has been properly balanced for the group it is actually aimed at, or how satisfied actual users are. It is easy and mindless to go on adding new features to a program. Knowing where to stop before it gets too complicated for the ordinary user to enjoy using it is a grossly neglected part of the skill of

programming.

Systems of romance

Strange this feeling, as the computer age has heated up. It's a feeling that as an intricate part of life on this planet I have been given the right to own such power, lying at my very fingertips. Just under the keyboard lies a brain more complicated than most humans can comprehend.

Yet that power is only intrinsic. the real power remains in the biological organism of the computer which designed the close running companion the microprocessor, that of the human brain, a conglomeration of thinking power resulting in the ultimate of maris tools, capable of guiding him even

Now that I am part of this System of Thinking I, am howildered at the way it has changed and is continuing to change the society we live in. If feel that every time I mention to friends and colleagues that we write and daughter includedly have acquired one of those dark prysterious machines, their view of us changes. The usual comment being: "Ohl foot understand those being: "Ohl foot understand those

As we all know computers are like dumb waiters, "they can't do anything by themselves, without a human operator putting in info". Knowing this takes away none of the awresomeness of the feeling of power I get every time I key in relays at the speed of light down microscopic channels to command centres ready to obey, in the right sequence, of course.

For me Wah Danney's "Trom" was more than fastary, I thought it was in every way analagous to the computer and operators that quenerated the major graphics animated into the movie. The computer and the human brain is a two-way combined to the movie. The computer and the human brain is a two-way combined to the service of the computer and the human brain is a two-way combined to the service of t

Meeting the new challenge for me is fascinating. The new frontiers are now in sight, dialogue from both sides continues to be understood – the future, well who

R Stammers, 9 Burnley Hill Terrace, Stone Chair Shelf, Halifax HX3 7LQ, West Yorks.

P.S. Sorry I haven't mentioned the mag or included any comments such as great type set, or keep us, the users, happy with more absorbing helpful information etc etc but rest assured as long as it, the mag, remains in the above state I'll keep boying it, ok.

Endless manic miners

If there is anyone who has Software Project's Manic Miner on the 64 and is unable to get anywhere on three lives, here's the procedure to give unlimited lives. Bowind the tape.

DAMS modified

Re your article in Commodore User March 84 Shedding light on the matter' I should like to shed some light on the DAMS Pixstik

Ever since the early days of the university mainframe demonstrations I have eagerly awaited the advent of an affordable light pen. When I saw the first advert for the Pixstik for my 64 I thought that my dreams had come true and duly sent off my money. When the box eventually arrived I read the manual loaded the artist program and

Well, I was really impressed with the software but quite disappointed with the nen. My dream was shattered. When used with my Ferguson TX colour television (which I consider pretty good) the light pen's cursor seemed to fly everywhere, especially to the right hand edge of the screen, and

I had a choice: do I ask for my money back? Or is there some design fault I can rectify? Now, sending it back would have meant more weeks without a light pen; and so I decided to prize it open and have a look. DAMS claimed that the 64

Pixstik was greatly improved: but the following obvious, simple, cheap modification made it much herter (I find it hard to understand why DAMS could be so penny

Modification number 1: Strip off a half inch piece of black quartor inch diameter co. av cable sheathing. Push this tightly over the lip tages. Firstly you now have a soft diode lens or the metal case. No plastic acts as the blinkers on a present on the TV screen do not now manage to discharge themto that); lastly, dust now gathers around the plastic rim and not the

Modification number 2: It flex is not screened against radio electrostatic interference when more than half of the flex was

pens, the flex is actually three wires of which only two are used If one end of the wire which has terminal marked V on the DAMS pcb, the extra screening effect of allowing more of the flex to be closer to the screen without caus ing problems And a complete cure to this interference problem can be achieved by replacing the coily flex altogether with standard microphone co-axial cable. When this is done the extra cable length 2.5mm sheath diameter audio

Modification number 3: Look at figure 2 - capacitor C1 and resistor and transistor stages. This enables range of ambient lighting condi dark screen border. The bright ness control of the television se

Modification number 4: The ingain of the circuit, the result being colours except dark red and large

Hi all Vic-20 owners! I would like a penpal around my own age. My address is: Miss I, Smith, 47 Northend Road, Erith, Kent. (age 14).

MASTER MINDS.

PASS ALL THE QUESTIONS AND DISCOVER THE ANSWER...

If you can write original programs, convert from one machine to another and expect your rewards to equal your effort then you may be the person we are looking for.

we require programmers proficient in machine code on the Z80 series, 68000 series, 6809, and 6502/6510 processors. We require games, utilities and education programs on the Commodore 64, Spectrum, QL, Electron, BBC, Atari, Memotech, Dragon, Atmos and MSX computers.

In return we are offering the right person the opportunity to have their program released throughout Europe by Quicksilva Ltd and throughout the Americas by Quicksilva Inc., plus the financial security that only we can offer and the opportunity to join the greatest team in the

If you want to be associated with the top software house then phone Paul on the hotline today, it may be the start of a great future!

Software Houses

Let us take away your problems and give you the opportunity to get back to programming.

Quicksilva can provide the financial security, production, promotion, marketing and distribution for all your needs.

For a frank discussion, in the strictest confidence, phone Rod Cousens today on (0703 26515.

We have all the answers.
