Now read on: Super Blit Commodore's Vic and 64 game proves to have a rather special quality: it is helping dyslexic children to overcome their learning disability. A teacher apparently wrote to Commodore to say that Super Blitz has helped her pupils and her own severely dyslexic son to develop the associated with reading. The game is a City Bomber clone, an skyscrapers in which King Kong is hiding. It seems the program's teaching value is in the movement of the plane across the screen: as the child concentrates on following the plane from left to right, moving down a space with each pass, he or she follows the correct tracking for reading and does not suffer from erratic eye motions back to the left. It's a chean one too - available on cassette at £4.99.

Exit Asile Following a stream of customer complaints we've established the lamin-order games supplied Anii-al-order games and Micropystems has gone bust. We weren't taking any more orders from Aniik for adverts anyhow, but that's cold comfort to all those people who saw their cheques cashed and no products arrive. Your chances of getting your money back? Ziich.

The trouble with the plethora of new low-cost printers now available is that virtually none of them will plug staright into your Vic or 614. To make you even greener with envy of micro owners with sensible interfaces. Epon is launching two new thermal printers, the P-40 and P-80, costing 589 and \$180 respectively. Both appear with only RS233 or Centrolics interface options.

The P-40 is a portiable thermal dot matrix printer small enough to fit itside a briefcase. It prints a respectable 56 characters per second, has rechargable batteries and uses thermal paper (so you don't need print ribbons). Column width is 40 characters but you can pet 80 or 30 characters on a line by using the condensed or enlarged print facility. According to Epson, the P-40 should be available by August.

The more expensive P-80 won't be available until October. It is also battery operated and runs at the same speed fulfile the P-90, it's a true 80 column model; it prints in both text and graphics mode, has a choice of Pica or Elite styles, and will accept plain paper, units thermal transfer ribbon cartridge. Both models use only a friction feed mechanism

To use either of these printers with the Vic or 64, Epson recommends the Centronics parallel printer interface from Impex Designs. It's a simple plug-in-and-print device which includes all Commodore Caphics. That sounds nice 'n easy, Trouble's, it's not exactly a snip at \$84.98. That's the current price – Impex may well be reducing it for this year's Commodore Show, Impex is not 1-900 (999).

Dennis Law presented the prize of a CRM 1541 disk drive to highscoring Steve Northrop of Ilbeston, Derbyshire, for his top game playing on Gridtrap 64 from Livewire. Dennis, himself an owner of a CRM 64 system was amazed when told of Steve's top score of a SR8. The Livewire Ri-Score Competition is free to enter with each cove of Gridtrap 84 and the other Livewire cause.

Now there's a selection of hardware to match our selection of software.

At HMV we've just installed the latest ranges of hardware and peripherals alongside the massive selections of software in our Computer department. So whatever you need, whether it's a disk drive, or a Yoodoo Castle or simply some expert advice, you'll know exactly where to find us.

The Computer Dept., Ist Floor, 363 Oxford Street. (Next to Bond St. Tube)

No. it's not the Vicsoft Customer Complaints Department at work It's a PR photo promoting a new company called Palace Software which has plans for games based on movies - like The Evil Dead. We've asked for a review copy...

Palace Software is a spin-off from the company that runs the Video Palace in London's Oxford Street, one of the country's biggest vendors of videos (and home computer software too). Other titles promised are jovial little numbers like Basket Case, Halloween and Texas Chainsaw Massacre. Rumour hath it that the Editor's own favourite, a Swedish opus entitled Clockwork Banana, is not among the future goodies.

Totally comprehensible

Thorn EMI has been dabbling with the home computer market to no great effect for a couple of years now. But there are new people and new ambitions at Thorn EMI. And there's a new deal with one of the more interesting IIS independents among Commodore-based software

emphiers. TOTL Software produces a

range of low-cost database. wordprocessing and spelling checker packages for the 64 - all of which feature a computer. carrying chicken on the box. There is a product-specific chicken for each of the current coftware categories" enthuses Continuing this fowl theme.

most of the programs come with CHICKSPEED - a facility that TOTL claims, "dramatically increases speed in critical program functions" (we won't be clucking about that until our review copies arrive). TOTL is an acronym of Tuna

O' The Land': which, in turn, is a narody of 'Chicken O' The Sea' elucidates TOTL's blurb Only part of TOTL's range is

now being distributed by Thorn FMI (noted for records tanes videos - but not for chickens). That company already produces a few tape-based games and cartridges for the Vic and 64. and has now added TOTUs more 'practical' software to its range (with more goodies to follow from various sources, we hear). Unfortunately nearly all the products available come on disk for the 64 ... despite the fact that TOTL's whole range of software caters for both machines According to Henry Kitchen Thorn EMTs sales and marketing manager, "we may introduce more of TOTL's range at a later date". Oh goody.

At present Thorn EMI is offering TOTL's Infomaster, a disk-based data-management program costing £49.95. For the money you get a maximum of ten files per disk, 100 fields per record. 245 characters per field and 2,500 characters per record. Features include user-definable report formats and 'templates' which automatically configure the software for a number of

different sorting and retrieving tasks. Reportedly it's very good. Also for the 64 is Text, a diskbased word processing package

at £44.95. We haven't yet tried it. That's complemented by a 10,000 word spelling checker, also on disk: that's being priced at £34.96 and is customised for UK rather than Americanisms. The only product available for

both Vic and 64 is Label. That allows you to sort and print mailing lists, catalogues and the like. It has a search and sort facility and integrates with Text for the production of form letters. Obviously the facility is less than useful to Vic owners, for whom Label comes only on tape and costs £19.95. Both tape and disk options are available for the 64. costing £19.95 and £24.95 respectively. More details on 0252 543 333.

• SHORTS •

Personable: The Computer Trade Association has voted Rod Cousens of Quicksilva 'Person of the Year' for 1983 "primarily because of his work in promoting the UK software industry." In his capacity as Vice Chairman of the Guild of Software Houses (GOSH), the self-styled watchdog of the industry. Rod has been active throughout 1983 "in his efforts to fight tape piracy and says here). He's managing director of Quicksilva, one of the leading games houses

• SHORTS • Blunders in Screen Scene: We did an injustice to Romik's

Dicky's Diamonds (five stars in the 'value for money' rating) in our June issue. For a start we called it 'Dick's Diamonds': and we got the price wrong - it's \$6.99 not £9.99.Even better val SHORTS

Quick but not dead: Quicksilva one of Britain's major home computer software houses, has been acquired by the Argus Press Group - publisher of Computing Today (and other titles) and part of the British Electric Traction Corporation (of course). It seems Ouicksilva will reportedly continue to trade under its own name: the company says that financial expansion, forthcoming innovati and "a more intense marketing strategy" will "maintain its position and enable it to "accelerate into new technological areas'

Bus Shop repairs

GCS Rus Shops are the latest idea in computer repairs, and it's a simple one at that. You merely hand your computer over the counter at any Bus Shop and an engineer will identify and rectify minor faults there and then. For more complicated repairs, he'll tell you when the machine will be ready. Just like going to the dry-cleaners really.

GCS Engineering is one of the country's larger maintenance organisations dealing largely with minicomputers and business micros. But its Bus Shops will give equal service to both home and business micros. So you cari quite happily bring along your humble Vic. 64. Pet and any peripherals for a quick fix.

Prices are a standard £15 per hour with an extra charge for snare parts, and all work is quaranteed. Paul Alexander of GCS asserts "it's company policy that machines must be fixed within 48 hours unless we have problems with spare parts" -GCS buys spares direct from

Bus Shops have already ppened in Sheffield, Altrincham, Basildon, Feltham and Chester,

with plans for more in Birmingham, Manchester, Bristol and Airdrie. The latest to open is inside the Micro Systems at Lion House store on London's Tottenham Court Road, Lion House is opening more shops in the Central London area which will also incorporate Bus Shop Good Thing considering that Commodore's own repairs are slightly less than speedy.

SHORTS

More micros: Home computes ownership has more than doubled in Britain during the past year and the market looks set for further record arouth save a market survey published a couple of months ago - more than one home in ten had a micro-computer in January 1984. 11 per cent of households compared with 4.9 per cent in January last year. Sinclair and Commodore currently dominate the hardware market - and the top six models listed in the report account for 87 per cent of micros now in use, and the report asserts that it's difficult to see any long-term future for less popular models or for new entrants unless they can offer some important advantage. On the other hand, the software over in 1984 with arcade and adventure games likely to take

70 per cent of total sales.

A bit weird, maybe, but this is Intelligent Interfaces' Syscon 6-which enables Commodore peripherals to be used with the BBC Microcomputer as though they were standard floppy lers. A specially-written disk filing system and coutines are supplied in ROM, which makes the commodore peripherals totally transparent to ograms written for BBC d ly be used without modificati mmodore kit. Doesn't work with the 1541 but should be of tue to anyone who used Pets in the past and now has a BBC mputer with the Commodore peripherals still available. e price is £156, the contact point is 0789 296879

es from joystick maker Voltmace. Or ad 16C, a 16 way programmable keypa r the Commodore 64 that plugs into the two jo mes complete with a program on cassette which en u to choose the alphanumeric value of the keys. ycaps are numbered 0 to 9 with the remainder blank ed to offer alternative keycaps when we have a better lea of which ones people require." The Datapad will retail at

The other item is "an alternative to the chunky toy-type ck"; the Delta 3SC is a lightweight hand-held stick which d be more comfortable (hold it in one hand while operatng it with the fingertips of the other hand). The switches are otary slide switches and take no pressure "however hard you ush on the joystick". The three fire buttons have been tested ons of operations, says Voltmace. The Delta 3SC will ost £10. We've requested review units. Meanwhile, info from oltmace at 0462 894410.

SHORTS Comal quip: Brian Grainger's COMAL series is apparently generating a fantastic response So you might like to know about the COMAL Users Group at 5501

Groveland Terrace, Madison, WI

53716, USA -they appear to be well-organised, and certainly have a lot of COMAL goodies to sell at basement prices. Including a disk COMAL for the 64 at only \$19.95

is is the US-derived Data 20 parallel interface, now on offer in the UK from Impex (01-900 0999). "The easiest way to use a parallel printer with a Commodore computer" says Impex gh it's hardly alone in this field - at 5p under £55 it's not heapest, either. But Data 20 prod tion, there's some commendably high technology in the gir (CMOS), and it's quite clever: for intelligent printers v programmable characters sets, the interface has a p e it appears to the system as a 1525 printer, translate mmodore character sat to according odore character set to ASCII and passes through ics characters. CSMOS means it doesn't use power from e computer, the printer, or any external supply source oks good, and sounds easy to use – simply plug it in, no soft are to load or switches to configure.

Hard copy for Commodore

The MPS-801 printer reviewed

by Ken Ryder

When choosing any printer for your Commodore computer the software you intend to run should be taken into account. Why? Because many low-cost software packages such as Abracalc and Easy CalcResult support only Commodore printers Word processing is a little bit pointless without a printer. In fact Commodore's disk

drive offer including Easyscript for free is a great way to sell printers! But the advantages of adding a printer to your Vic-20 or 64 are numerous.

and modify a program listing on paper than to scan through it twenty odd lines at a time on screen. For small amounts of data it is often quicker to look through a hard copy of records, than power up the computer, load the

program, load the data and then access the information particularly if it is all on cassette. For example records of names and addresses can be kept in a book of printout next to the telephone. The records are maintained on the computer and the book updated via the printer

as changes occur. The same

goes for other records, such as a diary, or financial statements. Commodore has discontinued the 1818 and 1828 printers in favour of the MPS-801 dot matrix printer. At 30 characters per second tops the 1515 was slow and noisy, using narrow nonstandard paper too; the 1525 had a standard paper width but was

Roth printers over \$230 when first introduced. The MPS-801 costs the same; but for that you get a faster print speed (50cps) with a reduced noise level, and

What you get A power cable and serial communications cable are provided. The power cable is a respectable two metres long, but

The ribbon is supplied in a plastic cartridge with an easily have to replace the whole cartridge when the print fades just the inker. At £6.90 per cartridge including VAT this is just as well: Commodore was unable to give me a price for the inkers, which tells you something about their availability ... The than the long ribbon and two reels supplied with the 1815 and

The documentation indicates that the cartridge should be easy plenty of room to work in, as the front cover is easily removed. But a tension knoh must he votated to locate on to a lug as the cartridge is pushed into place: I found this a little awkward, and the cartridge did not snap into place as indicated - some manipulation of the retaining clips was needed finally to locate

Documentation

The documentation is to Commodore's usual pitiful standard. The 44-page typeset booklet is the same AS size as the manual supplied with the Vic and 64. The instructions start with a general description of the printer, photographs pointing ou the main features (the power lead is shown with a plug). This is immediately followed by a description of the sorial interface the device selection switch and a cursory mention of secondary addresses - all before the booklet describes the fitting and removal of the ribbon cartridge

Paper loading is not so well covered. When the printer arrives the tractor feeders and central rubber support are positioned at the far left of printer and must be dragged along the hexagonal bar which drives them. They are only held by friction, and the paper is inserted under a hinged plastic Sap which separates incoming paper from the outgoing. This flan can be removed to ease paper loading; but that wasn't mentioned and I only discovered it when it came off in my hand! I would like to have seen an

alternative slot in the base of the printer for bottom entry feed. This is usually found on more expensive printers and provides for a more direct paper flow, usually through a slot in a desk.(Though this would be a drastic modification to the dining room table, the printer could be stood on a plinth astride a box of paper - the output could then be

As naner feed and outrust is through the back you would expect the year of the printer to he free of obstruction. Instead the two serial ports are located in the rear together with the device selection switch. They are nositioned about 2in from the right hand edge of the paper. The two serial ports are

ovided so that several devices can be daisychained together. The device selection switch has device number to be 4 or 5, the third position tests the printer head by printing out the character set continuously. Two device numbers enables you to run two printers connected multaneously - say one daisywheel for word processing, one dot matrix for graphics (hang the expense).

Direct connection of the rinter to the computer is described in the booklet but no mention is made of daisychaining via a diek drive

Then comes a classic mistake which describes the movement of the printer head on power-up The documentation indicates that the centre of the carriage and then return to its original position. In fact it moves a guarter of the way twice. This kind of thing could lead you to think that something is wrong with your new acquisition

This error is almost as good as the one in the disk drive manual which firmly instructs the user not to open the drive door while the green light is on. The green light is always on the reference should be red light, of course. Section 3 describes how to

direct output to the printer with the OPEN, CMD, PRINT# and CLOSE commands, both direct and under program control. The secondary address can be used to set the character set available - graphics-and-upper-case mode or upper-and-lower-case. These are called 'cursor up' and 'cursor down' modes, which is

misleading; in fact the instructions are generally disjointed or vague, riddled with spelling mistakes and missing words. Whoever proof-reads these manuals must be intending to flood the market with authoritative books on Commodore products

Printing

Several printer modes are available, and are set with a CHR\$ code (see table 2). Printing can be performed in one of two character sets, just like the 64 or Vic themselves - except that both character sets can be used in the same line.

Both sets may be normal or reverse text: the latter is particularly useful for emphasis In addition all the characters in either mode can be printed double-width, which is useful for titles (double-width reversed characters are also available).

The versatility of the printer lies in its ability to mix modes freely. For instance, double, width upper-case reverse characters can be combined with normalsize lower-case text starting at a given dot position

The Basic TAR statement does PRINT# statement. Instead a character code, CHRS(16), sets the tabs for the printer head. The print head will move to the specified column and start

There are 80 columns of characters and each character is made up of six columns of dots. giving a grand total of 480 individual dots in a row. Printing can be started at any individual dot position: see the sine curve example for just how good this

User-defined characters The advantage of a dot matrix over a daisywheel printer is its ability to produce characters to the user's own design, such as logos of Greek symbols within

Winters

This is done in a similar manner to user definable graphics on the Vic or 64, but the grid is limited to 6 x 7. Again, these characters can be mixed with standard characters.

The other great advantage of dot matrix printers is their ability to draw pictures. With suitable software the user-definable graphics option can be used to take a hard copy of a highresolution screen. This is not

The last graphic mode allows a single row of seven dots on the print head to be repeated a useful for underlining, or producing horizontal bar charts.

functional look of the 1815 and 1525. Except for the previouslycable sockets, all the controls are to a rectangular area on the casing about the size of the pressure on this rectangle causes the paper to advance one line at Alternatively the paper can be handle on the carriage, which is much more convenient than the

In conclusion

The lack of true descenders and paper feed obviously makes it word processing; but the MPSlike chib correspondence where

The best accessory for your micro

The Rotronics Portable Case transit. Additional storage space in the

Here is the ideal portable work station for home, school or work. Specially made for most home microcomputers it contains your VIC 20 or CBM 64 within a smart executive style case with removable lid for convenience in use.

The individually tailored foam insert securely protects your micro and cassette recorder (both types) during lid holds manuals and up to twenty cassettes. A scalpel is provided to modify the insert for expansion units and an alternative insert can be supplied if you change your hardware in the future. The case is also available with uncut foam inserts.

All components remain fully operational within the case via inter-connections

routed between the double lavers of foam, so there are no unsightly leads This is the first case designed for easy use with each component positioned for convenient operation. The overall dimensions are 138mm x 700mm x

TOMMY'S TIPS

Tommy is Commodore User's resident know-all. Each month he burrows through a mountain of readers' mail and emerges with a handful of choice queries. The result, before you, is a wadge of priceless information and indispensable advice. There's even the odd useful tip as well.

me a tape of Wacky Waiters.
To my amazement it failed to load. All I got was the computer searching right through the tape as if there was nothing. On trying again I got an error. This has also happened when trying another

I am puzzled by this and would be grateful for a solution.

I assume that the same tape did load on your friend's machine; in which case we can rule out a faulty tape (they do occur).

The first thing to do is make sure that your tape heads and the pinch roller are all clean. It is a good idea to invest in one of the tape head cleaner and de-magnetiser tapes you can buy from Smiths or Boots et and use it once a week, under normal use. Alternatively, clean the heads with a cotton bud soake heads with a cotton bud soake to a commercial head cleaner fluid (you can get it a most Hi-Fi; shoots).

If this still does not solve the problem then it is possible that your tape heads are out of alignment. If you can save and load your own tapes without difficulty, but are unable to load anyone else's tapes then this is almost certainly the problem.

It is possible to rectify this your-

self if you know what you are doing; otherwise you should take your recorder to your dealer (especially if it is still under guarantee) and ask him to set it up properly for you.

Dear Tommy, I wonder if you can help me. I've got this problem with my Commodore 64: I cannot get it to understand the word PLOT, it just doesn't want to. I've tried everything I can think of but with no success. I've looked in the manual but I just can't find out

how to do it. Then I found in the manual a bit that told you how to put a dot on the colour memory map by POKEing these numbers: 1524, 31 and 55796,2. I tried these and they worked; so then I started to play about with them, but with no success. Could you give me the solution for this problem?

The simple fact is that there is no such command in Commodore Basic as "PLOT" (oh, would that there were!). Unless you buy one of the many extensions to Basic which include this command, or something similar, there is no way you can plot points on the screen in Basic without using lots of POKE commands.

What the two POKEs you have quoted do is to print not a dot but the round ball character (Shift Q) in row 13, column 20: then they set the corresponding location in the colour map to Red.

If you want to go into high-resolution mode to plot lines or emulsingle dots, life gets rather complicated; basically you have to scatch; basically you have to see a which couples 8000 bytes of RAM Sasican be used to plot lines and suchlike, but it sextremely slow-machine code is the only real answer for anything like high-speed plotting. If you are really interested in

pursuing this then it might be worth your while buying the Programmers Reference Manual (£10); this contains at least some hints on using the bit-mapped mode for graphics plotting. Alternatively, why not purchase one of the Basic extensions which will allow you to "PLOT" to you heart's content?

Dear Tommy. The display on yC64 is flickering whenever the computer is parked in a input or a wait or similar endless loop. Small twinkles appear around characters like D, E and F although the rest appear normal. However — if the character set is moved to RAM, then all characters appear with a part of the character of the character set is moved to RAM, then all characters appear with all characters appear with a similar control of the characters are proposed to the characters of the characters

The C64 seems to have a strange bug. Press both cursor-

keys permanently and then press the shift-key repeatedly. You should then be able to observe some spades on the screen, if yours has the same

It is possible to load Vicprograms into the 64 via the cassette unit. You only have to diminish the motor-speed a little. This is done very easily by mounting a 27 to 31 OHM resistance in serial with the cassette-motor's power supply cord. You will have to experiment a little in order to find the correct value - unless you prefer an adjustable potentiometer. Perhaps it would be a good idea to mount a switch so you could switch the resistor(s) in and out as needed

The flickering is caused by the swapping in and out of the ROM-based character set. The ROM care overlays the same address as part of the RAM: whenever the computer prints a character that to access the ROM to do it by swopping the ROM area into the moreory map. It is this constant changing that causes at least some of the flickering you can see.

When you tell the computer that

the character set is in RAM, it doesn't need to swop the ROM set in and out; hence you get no flicker. I am afraid that your 64 does not

I am afraid that your 64 does not have a bug; all 64s will produce characters if you press certain combinations of keys simultaneously. This is because keyboard does not have individual lines to each key - instead the keys are connected in a 'matrix' of rows and columns. When the computer receives the signals on the different wires, it translates these into a unique key position in the matrix By pressing more than one key at a time (other than shift etc) you are lating that combination of signals tion. Most of the combinations are meaningless and produce no charproduce the combination which a valid key would generate. You therefore get the same effect as if Dear Tommy, I have recently purchased a Commodore Vic-20 and I wish to expand the memory. Could you please advise me on which kind of memory pack to get? I have seen advertised a Super Expander, a 64K RAM pack switchable, 32K RAM pack switchable and a 16K standard; could you please tell me what is the meaning of Super Expander, switchable RAM pack and standard RAM? And what are the drawbacks and advantages of each? If I expanded to 64K could I run games and programmes meant for a Commodore 64? Could the RAM packs and Super Expander plug into the computer itself? Or does it need an interpod? What is meant by block 1 or 2 or 5? And what is a Mother Board?

These may seem simple questions but I don't know anyone who can answer them for me. I eagerly await your reply.

P.S. What is Hi-Res

Graphics? And I have seen plenty of ads for 32K RAM packs but none for 64K. Could you please tell me anyone who stocks this? Wow. where to start? Basically the

Vicis memory map has a number of vilosif for extra memory. There is a 3% talor which can be filled by any 3K RMM pack, which includes the Signer Expander (this also gives additional commands in BARIC to deditional commands in BARIC to there exist the second of the easier to control. There are also three eX fusion and it is here that the blocks come in; Blocks 1, 2 and 3 are the three EK RMM expansion areas, while block 5 is the area of memory reserved for RDM car. The second of the second of the control of the second of the control of the second of the used for BARIC.

The various 'switchable' packs merely allow you to select which blocks of memory you wish to use: some 28T packs include a SK RAM option as well, but you should be aware that you can either have 38 extra RAM or up to 24K extra RAM for BASIC programs, but not both at the same time. For machine code however, up to an extra SXK RAM

As for using a 64K RAM pack,

As for the motherboard, this al-Super Expander with 16K extra

with a standard Vic-20 16K RAM pack. When the RAM comes to 19967 bytes. I have seen several routines in your magazine for conversion from 16K to 3K or unexpanded. I

comes in. After entering the necessary POKEs to reconfigure my Vic, I cannot seem to enter any programs. I program but as soon as I press cannot enter what I would like to. What is wrong?

You have made an assumption locations 8192 and 24575. A 3K less you actually have a 3K RAM large hole in the memory, the Vic

process of writing my first adventure and I have two questions - which, if you have time to answer, will enable me

 For Commodore 64 and all ATARI Computers Written by Paul Wodkes

Commodores and Kids Books and programs for children

reviews by Clive Bulmer and Colleen Young

Home Computers are a natural for kids, feeding their inquisitiveness while featuring enough sound and graphics effects to keep them interested.

There are a growing number of books and programs designed specifically for kids - and specifically for kids with Commodore computers. We collected a few of them and invited a couple of professional teachers to comment.

Computer Playground is a collection of computer activities intended for children pt to about eleven years old. "Each activity is presented as a profile in a workbook, encouraging the user to learn how to use many features of programs which are both understood and entertaining". Well, that's the theory behind this publication.

To find out how much of this blurb was true, I leaned the book to a colleague, who happens to have a young child and a Commodore 64: I also checked it out on my own daughter.

Both found this book excellent, especially in the way it is presented. The print is clear; the instructions are very straightforward to follow, the use of colors is also effective from the point of view of a child. The only criticism any of un made about this book was its actual shape — though I feel it to be just right; a book aimed at such young readers does not need to look like a and the print of the Perhaps the only serious careat on this otherwise encollent book is its rather high price, inevitable perhaps for an input. But the satisfaction and joy that Computer Playground should give to its young readers — who couldn't fail to be absorbed by a pages — more than justifies the ELZ 70.

I Speak BASIC to My Vic

ed computer literacy course that introduces ents to BASIC language programming. HEVEENS! I Speak Basic to my Vic

Computer Playground

The Book: The Author: The Publishe:

The Price: The Reviewer: M.J. Winter Datamost (various UK impo ers)

about £12.70 Clive Bulmer

Clive Bulmer Excellent, even at that price This book is designed to teach Vic Basic to youngsters in the range from 10 to 14 years old. It gives guidance, explanations, exercises, reviews and guizzes: and it does that in a total of 33 lessons, each one being quite well set out and easy to follow.

I have used some of these 'lessons' with small groups during out-of-school activities and found them to be quite well received. Some pupils even wanted to take the book home for self-imposed homework - itself a good pointer to

the book's usefulness! Teachers should find this book of equal interest, though, especially with regard to the various programming sections/areas covered. The only criticisms I can make are the fact that the book is written with much American jargon - but then, it is American, the jargon is not too frequent.

The program listings, although clear, were not produced using a Vic printer; graphic character keys such as 'cursor right' have to be denominated by CR. (In view of the quality of the 1515's print, that might not be such a bad

thing_Ed) The book is spiral-bound, an idea I like though I don't think this a practical

idea for use by children in a classroom situat To conclude: Kids and the Vic is a useful publication, but in my opinion falls short of Tony Noble's offering.

Another American-produced publication, Aubrey Jones' book is aimed primarily at students following a computer course in school. It is accompanied by a teacher's manual which contains suggestions for implementing the course and annotations to aid the teacher in lesson planning. There is also available a set of spirit duplicating masters which reinforce key concepts: hopefully the UK distributor Prentice Hall can also supply

The book itself is well set out, very easy to follow and divided into 15 parts. These range from a look at hardware items to arrays and subroutines. Most lessons have eight essential components - objectives, definitions, examples, exercises, assignments, a summary, one or more practices and a quiz. The in America, it will still be of use to other readers studying Basic.

Where the book loses points is its lack of tuition with regard to moving graphics and sound. I couldn't help feeling at times that despite the size and thickness of this publication, much of what it was trying to put over has been covered in the user guide just as effectively.

Nevertheless, I speak Basic to my Vic may be the book for you to study at home rather that its original concept of teacher/pupil package for use in

The Vic-20 for Children

and British - Ed.)

At last - a book written for a specific machine, aimed at a specific type of person, produced by an educationalist. (And it's both relatively inexpens

The Vic 20 for Children is exactly as the name implies. Yet despite its title will prove an invaluable companion to all new Vic-20 users, children or not It's written in a clear, easily understood style. I was impressed with the quality of printing and the use of graphics in this publication - others take note!

Tony Noble is to be congratulated on this book, especially for the way he takes the user from the task of switching on to the task of designing and writing programs in twenty nine practical programming steps - a highlight of this book. Many listings are included, all guaranteed to work as they have been printed using a Vic printer. Within these pages a reader will find programs which include mathematics practice, code breaking, simulations, arcade and adventure-type games.

The Trashman Cometh

Garbage Collection on Commodore Computers

(Part 1) by Jim Butterfield

The garbage collection beanement isn't limited to commodore machines, of course, such of what is said here may eapplied to other computers. he specific remedies that will be given for Vic, 64, Pet and the their CBMs can be adapted to eit the different logic of other machines.

Commersely, not all Commodore machines have garbage collection problems; for example, machines identifying themselves as running Basic 4.0 won't have these delays. An example. Try this on your

100 DIM A\$(800) 110 FOR J=1 to 800 120 A\$(J)=CHR\$(65) 130 NEXT J 140 PRINT "X" 150 PRINT FRE(0)

It will take a few moments to perform the loop in lines 110 to 130. You would expect this. But unless you know about garbage collection, you won't expect much of a delay in the last three lines; after all, they are just PRDT statements.

between printing "X" and "Y", that's a garbage collection pause. To illustrate the odd nature of garbage collection, change line 120 to read A\$(1)="A" - this is the same thing, of course, since

Why it happens

so in one of two ways.

If the string exists completely within the program, it will be used 'where it lest', there's no need to make a copy. For example, a program statement such as 500 XS = "RELLO" will use the string RELLO" will use the string RELLO" will sue the string RELLO" will also similarly, the statements 800 DATA COTFEE and 1900 READ S. will cause the string COTFEE.

There's a sneaky event lying in wait for you within most Commodore machines. It's called garbage collection. And it will show up, seemingly unpredictably, in any of several ways.

or several ways.

Your program may seem to run slowly or erratically in spurts. The program may have frequent pauses, each of which lasts several seconds. Worst of all, the program may pause for much longer periods of time — a minute, ten minutes, or even longer — and will seem to have crashed.

You might be tempted to turn the machine off, thinking that it has failed. It hasn't. It's just the garbage collector at

There doesn't seem to be a name for this kind of string: I'll use the term static string to refer to a string used directly from its

on the other hand, some rings can't be used this way. If I reate a string with an INPUT attement or by using a string anipulation command such as TRS or CHRS, the computer must find a place to put this ewly-formed string. This kind of

must find a place to put this newly-formed string. This kind of string must be packed away into a string storage area. I'll use the term dynamic string

III use the term dynamic string refer to strings of this type. There is no suppose that a running organ creates a dynamic ling with the statement BNUTA-, REENESZEZ, which will be cked into the string storage as, Later, the program loops a sket for more input with PUTA-R, and the user now see in MARY, MARY, noo, gets cled into the string storage has but even through Ebeneezer no longer needed (his been no longer needed (his

he string storage area. It's concerted mear the top of available basic memory: above the corporam, above the variables, and above the arrays. Dynamic strings are placed at the top of this area. As more and more strings are created, they work this pass are created, they work heir way downward. Often, many discarded strings will be already discarded strings will be eff behind. — Deneevez and hi tiends. Yet no stempt is made tiends. Yet no stempt is made.

This type of thing continues til the dynamic strings bump to the top of Basic, variables, id arrays. At that time, the aste space must be cleaned up ence, 'garbage collection'.

Bad timing

Garbage collection can take up a lot of time; more about this in a moment. Worse, it's hard to predict when it will strike. It's difficult to code in a JUST A MOMENT message when you don't know when that moment

You can force a garbage collection by using the FRE(0) function In order to measure free memory space, the Basic interpreter must repack the strings. But doing this may not doing a garbage collection saves you no time on the next one. If the illustrative program above is still in your computer, restore the the program is complete - pause and all - type GOTO 140. You'll takes just as long as before, even though we know there's no garbage to be collected.

You may estimate garbage collection timing by using this crude rule of thumb:

Garbage collection time = (number of dimensional strings) × (number of dynamic strings)/10

The answer is in milliseconds. Caution: this is a very crude formula. The actual time varies also dependent on average string length. If we work out this formula in terms of the example, we'll get 800 times 800 divided by 10 - giving 64,000 milliseconds or slightly over a min-

Dont't worry if your machine gave you a noticeably different time. It's the principle that counts

here; and anything over a few seconds is too long. We must learn how to reduce this time drastically. Causes of garbage

collection

All we need to do is to learn how not to leave waste strings lying DYNAMIC STRINGS

ADDAYS

VADIABLES

around - no waste space means no need for garbage collection. That's easy for me to say, but it will take another article to go into the details of how to do it.

The following rules hint at the details that I'll give in the second nart of this mini-series: Rule 1: Don't move strings around. It's tempting to move strings when your program is doing a sorting job. Don't do it: instead of moving strings, move an 'index' array.

Rule 2: If you transfer strings into and out of computer memory in 'blocks', set the unused strings to null - for example, AS(X)="". When your before reading in the next block. force a quick collection with

Rule 3: Identify the garbagemaking areas of your program The most common is a GET or GET# loop which builds longer ngs through concatenation. By fiddling with pointers immediately before and after such operations, you can perform a local garbage cleanup with great savings of time

Rule 4: Some arrays may be changed to numeric instead of string. For example, "April 6. 1984" may be stored as numeric 06041984. Reducing strings reduces garbage-collection time Rule 5: If all else fails: when garbage collection seems imminent, write all strings to disk and clear them from memory; force a quick collection; read all the strings back in.

Details on all this next time. ◆ Top of Basic memory

The Commodore Treer Profile

by Simon Potter

Many a computer hobbyist must dream of turning an engrossing pastime into a full-time occupation, and Simon Tranmer is living proof that such dreams do come true. Only three years ago, Simon was a strictly amateur programmer. playing around at home with a 32K Pet. Today he still does his computing at home, but with a difference. His workroom is crammed with computers and peripherals (which, he says, are normally "switched on at 8am and switched off at midnight").

He also has a lot of money and a grandiloguent title: Chief Software Designer. Consumer Products. He works for the Surrey software house Precision Software. and he's probably best known to Commodore users as the author of the Superscript word processing package. He has since gone on to write or co-author the Superspell spelling checker, the Superbase database management package, and the brand new Superoffice which claims to combine all three in an integrated system. So how did he get to be a Big Deal?

Drama school in East London and a job subsequently as stage Theatre, Hornchurch, Like many something which at least paid the rant So he spent the next four engineer for Plessey, Luck seems to have played its part in Simon's career - albeit at times in a somewhat double-edged manner In this case it came in the form of an offer of voluntary redundancy he accepted the offer and spent some of the concomittant readies on a computer technology

The course was very much hardware-orientated, using a venerable CDC 168 (a transistorbased machine of the early '60s) as a training device. Simon rackons however that it provided an ideal grounding in computers. "It's very interesting working on a machine like that because you can actually see the discrete components, you can

Statements of faith Simon got his first taste of programming - and was hooked. The official programming content of the course was simply designed to enable engineers to understand the computer's logic. But he found himself spending after lectures, programming the 168 in octal machine code. Yuk. Some of his early efforts were

hardly triumphant, and he recalls ruefully one particular program which must lay claim to be the slowest over written. The 168 had machine code level, so Simon set out to write a routine to do it. It worked all right, but with one small snag - he calculates it would have taken 133 years to multiply two 13-digit numbers.

Still, he wasn't a programmer His brand-new certificate got him a job with IBM as a hardware engineer; and as luck would have it (again) he joined at a time when the 3030 series was being introduced and the 360 series was fading from the scene. Working on these two ranges as well as the still-current 370 series mainframes gave him wide experience of an awful lot of hardware.

He was still doing virtually no programming, but as he points hardware front you do get a very good idea of what the machine can do, what it's capable of. You also get an awful lot of feedback

really a sort of overview of the whole industry."

During his eighteen months with IBM, Simon passed another milestone in his career - the one that was shortly to lead him into home computers. He discovered Adventure. This was 1977, a time when Adventure was spreading like fungus to virtually every mainframe in the country. A real mainframe hacker's delight to replace those clandestine copies of Star Trek and programs that young ladies with unlikely mammary endowments.

Simon rapidly became addicted to Adventure: but especially as many machines had password controls which prevented the game being played during working hours. The only way to get unlimited playing time, he decided, was to

buy his own computer. And about this time the first home computers were starting to filter on to the UK market. "Eventually I bought my first Pet," he recalls. "It was an 8K 2000 Series, with the small keyboard and a cassette player built into the front. I taught myself Basic in about a week, and started writing

Adventures in the Pet trade Simon never did get Adventure up on the Pet. But he did write a

"I'd been entering the results

pools started and I didn't bothering entering the data for them; but I still did the pools and after a few weeks I won two grand. Everyone thought it was marvellous and said 'Oh, I'll have to get one of those'. I didn't bother telling anyone it was just a

fluke." Lucky, you see. That first Pet kept him happy for a while, but he soon felt that all-too-familiar hankering for more power: "After about six months I decided it was pretty hopeless trying to do anything really powerful in Basic, and that I needed to write in machine code. And I'd need disk to do it. The trouble was, I couldn't afford

Simon didn't contemplate writing in assembler because at that time there was no assembles available on the Pet. Still, even without disk drives he managed this period - including a very successful version of Space him. Luckily (again) he was now

him with time on his hands. He was able to take the Pet to work and program it there, as well as doing a regular two or three hours a night at home

Eventually, despite losing his iob thanks to another company 're-organisation', he got together new machine: a 32K system with disks and a printer. Best of all, a Pet version of Adventure was by now available through the Pet user group - "I played Adventure virtually non-stop for a month when I first got it," he recalls happily.

Fame beckons

More serious work was just around the corner, though, for it was around now that Simon started work on what would eventually become Superscript. At the time he had not the slightest idea of what he was getting into: "It started off from a little program I wrote which was totally unconnected with word User Club right from the start and was getting its newsletter. I found this little assembler program in the magazine - it was just displaying memory on the screen. So I played around with it and modified it, and it developed into a thing where I could store and retrieve text. It

all evolved from that program." Great oaks from little acorns grow - in this case with some help from the user group (which started going to the monthly setings of his local branch at

Mingin Hill, taking along his embryo program in the hope of experienced members. Instead he met with an enthusiastic reception for what was clearly the bare bones of a good word processor

Simon had never used a word processor, though he had seen them in action in the course of his engineering work. And while a number of the eventual features were based on his own ideas, he relied to a large extent on suggestions and feedback from members of the group

As the months went by, the program developed ... until it finally emerged as Superscript. "It didn't take up a lot of memory," Simon recalls. "The code was very compact, so there was a lot of text area, it had a lot of features that the competition (the commercial packages) didn't have - and it was very fast."

Even now it didn't occur to 32 Simon that he had a best-seller

on his hands - in fact, his first idea was to give the program away free to user group members. The cost of producin a manual and supplying the disks made this impossible, though, and the branch members eventually decided to sell it for 630. Which compared pretty remarkably with commercial packages selling for up to ten times as much.

fortune follows

The truth finally dawned at the 1981 Pet Show. Not only was Superscript selling faster than copies could be made, it was attracting considerable interest from professional software firms - several of whom made offers for the rights to the program. Clearly Superscript was due to take off, and as such it was in need of more care and attention than an amateur group could hope to provide.

Once again, luck was on Simon's side. His brother John just happened to be founder and called Precision Software; at that stage Precision was specialising exclusively in Unix-based applications software. Precision Software took over the marketing of Superscript - and sorted out numed out to be considerable Precision also acquired a promising young software designer, one S. Tranmer...

In the last two years Superscript has been developed and enhanced for the Commodore 64 and 700 Series, Superspell and Superbase have been added to the range; and other products, as they say, are in the pipeline.

Precision obviously did a good selling tob on Easyscript - not only is it one of the market leaders in Commodore word processing, it's also the Official Own-Brand Commodore product

Meanwhile Simon Tranmer is still beavering away in his front room. Simon claims that the

reason he still works at home is that "If I get up at eight o'clock I can get an hour and a half more work done than if I had to go to an office." The truth, as he himself admits, when pressed, is that it's very

difficult to get him away from his machines. He doesn't take lunch breaks or tea breaks, and while he "tries to take some time off midnight" he quite often works straight through. Hobbies? Of course: whenever he gets the chance, he likes to play computer games with his wife

It could be the story of any amateur programmer, really. Anyone, that is, with the talent to write original and marketable programs, and the dedication to work at it twelve to fourteen hours a day. Of

course, it does help to have a brother in the right place at th right time - but who wants it that easy?

a pleasant display with saucers whizzing everywhere, but the game is a pale shadow of Audiogenic's own Outworld. LS Audiogenic

Presentation:

CARRIER ATTACK Vic-20 (unexpanded) Joystick only Price \$5.95

Sustain 50 hits and the wake from your ship disappears . the crippled carrier soaks up a few more bombs then submerges beneath the waves. Before that situation is reached the odds are that you have been and their fighter escore the sended off ware after wave of bom bers and their fighter escore the best down in dair, which comes in hardy for intercepting bombs areart from dewnite planes.

The screen read-outs relate the

wave number and the points so far (each shot fired gives a minus score). Effective bomb blasts and general graphical representations allied to good use of colour and special effects; but no cause to rave over the sound, even though there is a snatch of Beethoven. Genuine skill is needed, along

with economy of ammunition, to attain a high score. Suitable for hyperactive blasters with a keen sense of timing.

sense of timing.

Rabbit

Presentation: WHECO Skill level: WHECO Falue for money: WHECO Falue for money: WHECO FALUE FOR THE PROPERTY OF THE PROPERTY OF

CHICKEN
CHALLENGE
Vic-20 (any)
Joystick or keyboard
Price 55.95

A poor mans Frogger, but using chickens: you have to see your five chickens home to their roost.

micro-ontic/ exceptional software
The format is basicaly the same

The format is basically the same as Frogger's with moving cars, ducks and chicken pies(!!) to avoid.

As with all such games you have

a time limit. You get six chickens, so you still have a chance to get the five home; but the task is made more difficult by the diving ducks — and the fox which suddenly appears in your nest. And as you go on to harder screens new animate appear, such as the chasting foxes which appear as you pass the cars.

The keyboard and joystick option this time is very good: you move quicker using the keyboard than the joystick, but some people would be happier with the stick.

The graphics and sound are ok, with none-too-well defined chine chines resembling squatting space in vaders. The sound is fair, but there is a constant irritating time which can't be turned off. On the whole not a bad little game: but nothing to get excited about.

CENTROPODS Vic-20 (any) Joystick or keyboard

A frenetic version of Centipede (again) with an expanded black screen featuring all the usual characters plus a malicious munchman.

(name)

He's a buddie of the purple leaping spider but employs different tactics, namely streaking straight across the screen on the row you're

Occupying.

One flaw in the colour schame is the choice of blue for you gen; it can appear indistanct. But all least the centre of attraction. But all least the centre of attraction is depoted well enough. Which (signing up the road societs the whole experience could prove amonying to the more sober amongst us - but not to confirmed insent songers. You won't find many better versions for the basic Vie. I liked it: bring on the steril

LS Rabbit Saber S

Presentation: Skill level: Mana | Interest: Mana | Mana |

CONQUEROR 16K expanded Vic 20 Keyboard only Price £15.95

Conqueror is an adventurish game with an old theme. You are the king of a country in Europe: to hang on to your kingdom you have to feed your people and make sure they have enough money to survive. The game can have up to 15 players—each with their own king-

To do this you have to invade your neighbours; there are soldiers and a supply of iron for swords to help out. The main object of the game is to conqueror all the other countries by fair means or foul.

The game has three seasons per year in which you can make ploughshares (tools to sow crops, beaten from the swords) or war, you can also tax your people to give you more money as well as wheat – but if your people leave or die you lose. Clausewitz was never like this...

The indestruction booklet is quite comprehensive but you do need to keep referring to it if you really want fully to understand the game. Sill, even though there are no graphics lit's an excellent game—not least because it brings out the like instincts in me. The power-mad might also find the game encyable covable 18

Computer Software Associates

DAM BUSTA Vic-20 (unexpanded Joystick only

This could have been just another game rigidly enacting a shallow plot, but real effort has been put in here. For starters there are two screens for the convincing-looking frogman to operate in and accomplish his dam busting. In order to place his bombs he first has to har poon and wriggle his way through a shoal of variously coloured barracuda. Which brings him to screen two, where he slugs it out with a phalanx of pugnacious piscene quardians - at the same time willy-nilly by a chopper. Assuming he had the foresight to surface and replenish his air supply, he could well place a bomb against the dam and dash back to screen one just in three in a row in order to pull out

No easy task, but at least the graphics are of sufficient quality not to pall during a long session. A neat, interesting game with a lot happening in 3.5K.

LS

_

the plug

Value for money: ******

DESTROYER
Vic-20 (unexpanded)

A fair amount of action for the basic Vic, with attacks coming from submarines and bombers. A radar scanner gives you an early warn-

ing as to the direction of the raiding aircraft, but you'll be alerted even earlier thanks to the sound effects. Two guns and depth-charge pads are your means of retailistion: along with direction controls, this means

tinuously.

Even though the game is good fun, I do feel that more colour could have been added and the explosions improved. The verdict: not an essential part of a collection, but perfectly acceptable nevertheless.

Sumlock LS

DUCK SHOOT Vic-20 (unexpanded) Joystick or keyboard Price \$1.95

You certainly get your money's worth here: it's value all the way, from the fairground music to the fully expanded screen. Everyone has seen a shooting gallery, and

here you get three rows of moving targets; purple ords; white rabbits and yellow ducks. All need one bullet to be knocked down, but if a duck makes it to the next of the gains a green and subsequently rame. If any duck passes through all three rows it will gobble up some of your bullets. But don't despair, there are 5° and 10° targets to his for extra ammo.

Eight speed levels, high score retained and a logical scoring points system (higher points for targets further away) plus extras for bullets and time remaining at the end of each screen. In no way is this cheap and nasty just cheap.

In this fast-moving all-action arcade game your job is to defuse bombs which appear somewhere on the crid of traps - hence name

You can control your man by keyboard or joystick; as you move the traps disappear, and you get 10 points for each trap you walk on, which gives good high scores. Each bomb has a 60-second fuse and if you don't reach it in time you loose a life.

But the game is not as simple as that: there are mines scattered all over the grid which explode if you step on them, and also there's the boot which stomps around the grid - if it happens to kick you you lose a life ... For extra points you can collect flags which lay about the crid. Once you have defused five

The graphics and the sound are good with well-defined 3D-box traps and skull and crossbones

is good, too, with a little tune being played as you go about your dangerous job. An enjoyable game that anyone can play; not a patch on Gridrun

ner, though, Livewire

for those who wish to put something 'sensible' on the screen once You are presented with ORBITS

(slot a falling shape into a matching landing zone); KNIGHT'S MOVE (land on every square on a chess board): GRAPHIC TWISTER (contort three shapes to match an original: RAINBOWS (complete mathematical sequence); -SLIDE PUZZLE (like the puzzle given (a number-eater teaser).

The graphics are low-res, straight from the standard character set in ROM: and similar programs could be easily typed in from various listings. But if you Presentation: Skill level: Employ Interest: Employ alne for money: Employ

Vic-20 (unexpande Cartridge Joystick or keyboard Price £9.95

If you are into collecting boring, furnating games, you're in back—here corner another one. Ignore the insert, that only makes it look interesting. Basically there are some old abandoned mine shafts containing bargs of gold (very difficults one), treasure chests and the obligatory lost explorer (female. of corne). By unine the Wacky Walser ryke lifts you can journey though the labytheths and recover the goods thus qualitate to the next level of play.

As the combined weights of yourself plus a treasure chest is too much for the lifts, you are compelled to use a different route to your carno - often collecting, pushing and shoving from shaft to shaft many times before the coveted points are in the bag. Just right for the odd dull half hour eh? The monotonous, insistent sonics might drive you round the bend; and don't look to the purple monsters for diversion, for they are virtually shapeless - no inspiration there. Fearing that the falling rocks on level four might make for compulsive play, I switched off. Surely a waste of a cartridge. Creative Sparks

MUTANT HERD Vic-20 (unexpanded) cartridge Joystick or keyboard

A while ago I was casting coverous gazes at this cartridge priced at 202 at half that price it's a must. Multindinous monstrosities are pouring out from their burrows and heading pell-mell towards a throbbing generator. They want to musch into the walls costing you a

laser. Instead you will have to become adent at manipulating horizontal and vertical bars in order to shome them off the screen. Use purple mutant-hunters down one of their tunnels and flip immediately to screen two. Strangely he's turned blue, but no matter steer side chambers to avoid falling rocks and place a bomb near the queen mutant: zip back to the surface and detonate. You're back to rows to worry about instead of four. Unfortunately the bars have developed gaps so the task doesn't cat any easier. To move up a level

life if all the walls are consumed.

Blast 'em? Oh, you don't have a

Considering the mutants have to be small, the graphics are good while the sonics should motivate you. Different. I like it!

SUBMARINE COMMANDER Vic-20 (+16K) Joystick or keyboard Price \$5.95

This was originally in cartridge form but is now available on tape at a bargain (real bargain) price. Although the artist's impression is a trifle optimistic, the program does make good use of the Vic's allround capabilities in sound and vi-

your using your man of the Mediterranean and the compass. There are various instruments and mages to monitor, manoeuvers to master. Use the sonar mode when closing in _ then up with the periscope in true Hollywood fashion. A scrolling screen gives the impression of scouring the skyline and displays your torpedoes zooming to the target (or missing). Sink a few, crash dive, check for damage: replenish your air supply at the surface when the retaliatory bornbardment has finished; and begin Real solid action with plenty to

Real solid action with penny to bite on - more than just another shooting game. The only fault worth mentioning is that the shipping should be depicted in a different colour to the land masses while in map mode. Good stuff though.

Creative Sparks

MULTITRON Vic-20 (unexpanded) Joystick or keyboard Price £7.95

We are stuck on the base line again with six different wayes of unfriendly freaks to see off. Our tripple-streamed laser gushes out continuously, if desired, mopping up all comers till the energy cells are drained then it's down to dodging about as they recharge. Anticipation and timing are therefore essential to get through to the bonus screen. This entails a testing (it looks suspiciously like a road) gaining an extra ship at the end. It hardly needs stating that the tempo hots up as we face the various nas-The laser rays make an exciting

graphic display but more imaginative use of colour would have made the aliens more spectacular. The sonics are from the standard recipe book and as such are ok. Verdict? Really should be worth translating for the 64.

SLICKER PUZZLE Unexpanded Vic 20 Joystick or keyboard

Slicker Puzzle, as the name suggests, is a puzzle game for the Vic. The puzzle is a square made up of coloured triangles which is turn form coloured squares. The complete square is mapped as coordinates A-P horizontally and vertically.

Once you've selected your skill level and score-board - there are eight skill levels and four scoreboards (the purpose of which totally escaped me ...) - the com puter shuffles two or more lines of the numbe (depending on skill level) and then proceeds to 'deshuffle' just to prove it can be done. It then sets its target moves; you re spond by going to the section you reckon should be moved to put the puzzle back together again. Each time you move a section your chosen scoreboard displays your number of moves. Once the puzzle is completed

Once the puzze is competed there are choruses of zapping noises to let you know. If you complete it over the target set, you'll get a message flashing that your moves were inferior to the computer's; and if you win, the Vic ungraciously flashes up unreadable glibberish. Fascinating stuff. Bf DK Tronics

SPACE RESCUE Vic-20 (unexpanded) Joystick or keyboard Price 66 95

Navigate a path through a stream of meteors to one of the three landing pads; rescue two stranded VIPs; return to the mother ship, avoiding or blasting the space rocks once more; then do it all again. Now on to stage two, just the

same but with more debris-to contend with. As you develop some sidl more interest in the game is generated — but never enough to keep you glued to the TV with no thought for the morrow. The purple meteors, which incidentally flow two ways, could have exhibited varying forms. Come to that, why stick to just one colour? The sortics

are of the type we have all come to take for granted but would miss if absent.

SCORPION Vic-20 Joystick or keyboard Price 67.95

II I had a fiver for every version of Cestippede I've seen... There are casti instead of fungi, and cactus spores replace fleas; but the spider remains — and a bonus lizard thrown in for good measure. Elimination of a string of red scorpions merely summons up a replacement along with another batch of cacti, both with altered colours.

Each version of Centipede has attractions and minot offferences: an almost bewildering selection, in fact, and I can't imagine any shop giving a demo of all they giving a stock. If you like the scenario this version should not disappoint you. But be warned — sooner or later it's always possible to find another variant that may appeal. IS

TRIAD Vic-20 (unexpanded) Joystick or keyboard Price £7.95

Far better than the dismal Cosmiads and just acceptable at Cosmiads and just acceptable at Cosptable and purple and blue fighters and two yellow mother ships peel off from the formation to provide a contest; the tail end survivors are especially difficult to mop up. Action and socies both pass muster, but I'm afraid the 64 versions of this arcade classic have spoilt me.

Still, until another software house is able to prove otherwise, this would seem to be the one to have on a Vic. Serious space battlers should investigate further. LS Sumlock

Two more spreadsheets:

Calculation from Scandinavia

by Ken Ryder

Continuing our on-going series of reviews on software that adds big-computer capabilities to the modestly-priced 64, we come to two spreadsheets from Sweden.

Handic previously distributed its two spreadsheet packages through Kobra Micromarketing, but now the company has opened its own UK office and is doing its own marketing.

CalcResult is disk-based (with a security dongle), is a so-called "3D" sheet linking together up to 32 pages of sheets, each of them with 16,002 cells (63 columns across x 254 rows down), making over half a million cells, price 599.

Easy CalcResult is cartridge based, providing a single sheet of 16,002 cells, and is less than half the price at £45.

Easy CalcResult

Easy CalcResult is a relatively limited but still pretty powerful cartridge that can do most of its Big Brother's calculation – its files can also be used by full CalcResult.

Each of the 63 columns in the Easy Calc sheet is identified by characters in the range A-BK. and each row in the range 1-254. Thus the co-ordinate D64 identifies a cell in the fourth column and 64th row.

Formulae are written in basic, using variables and constants, where the cell co-ordinate represents a variable name, e.g. Elfi, then wherever Elfi in entered in a formation of the control of the contro

Recalculation

Recalculation of the sheet can be column-by-column, or row-by-row. The default is column-by-column, in other words Easy Cacalculates the new value of A1, A2, A3, ... A254, then B1, B2 etc.

has been calculated, the value of A3 will be wrong. This can be evolded by careful layout of the sheet, or it can be rectified by

The recalculations process can be switched off so that several sew values can be entered on to the sheet before recalculating. This is useful as the act of calculation slows down data

many Culc uses all the normal mathematical functions entorythe trigonometrical ones, og SIM, OOS etc. In dedition several. brainess-orientated commands can be included in formulae table 11. The 64x relational table 11. The 64x relational can be used within the UT TELN ELSE function, particularly useful where a value to be calculated varies with the number of nems, e.g. discounts or prices.

The dis

y default, only four columns and I rows of spreadsheet are isplayed on the screen, which an be scrolled vertically and orisontally over the sheet using he usual cursor control keys. here is also a GOTO command which jumps the cursor to any o-ordinate on the skeet.

ght variable characters,

any value between S-18 to bring more or fewer columns on to the

Any labels longer than the maximum column width are truncated on the screen, and large values are displayed as exponents, but reain their true value in calculations. The format of each individual cell may be absend to integer or two decimal places, with left or right justification.

Any column can be used as a title column, fixing its position and width independently from the rest of the sheet (figure 1). It is scrolled horizontal over the sheet the title column remains fixed in the left-hand side, but it scrolls vertically with the sheet.

the silect.

This feature is useful for fixing the contents of one column in the left hand side of the screen, eg takings for january while the figures for other months are scrolled across for comparison. Unformantely the top row cannot be freed to display column.

beadings permanently.
The contents of rows and
columns may be replicated
(copied) to other areas of the
sheet, and the variables used
within the formulae may be
absolute i.e. equal to the original
value, or telative to the new
position. A whole matrix of rows
and columns can also be copied
if desired. Rows or columns may
be inserted or deleted as re-

Editing the contents of a cell simplicity itself. The FB key displays the contents of the cell under the current cursor position in the top left hand corter of the screen. The label, value or formula can then be edited usin the usual Commodore insert and dates here.

F7 is the key to everything, giving access to a menu of all the major Eary Calc commands and functions, and is the gateway to the others, so if in doubt _ push

Output

The contents of the whole sheet can of course be saved to tape or disk for future reference; be saved. Even on tape the process only takes nine minutes which is fast enough for most a

plications.

Printed output is extremely versatile, though parallel printed output are not supported. There are these options a screen dump of everything, including the row as column identifiers, but excluding the first three command lines of the sheet; a printed of all or par of the sheet; a printed of all or par of the sheet of formation the sheet of t

Documentation

The documentation consists of glossy 100-page A5 booklet. It divided into three parts, the first of which introduces the purpos of the cartridge and the special function keys it gives the keyboard.

seyboard.
Part two contains four lessons which graduate the user from time principles up to the most ophisticated functions of the preadsheet. The examples used ree interspersed with colour occeen photographs so you know exactly what to expect. All the commands appear in hold print to avoid confusion.

mmary of the commands plained in previous lessons. A lef appendix containing error essages and some blank sheets notes completes the

Considering the product

HOW TO TURN YOUR SOFTWARE INTO HARD CASH.

Turning a great idea into a profitable idea isn't easy.

It needs skill, patience and sheer hard work. But to be really profitable, it also needs the backing of a large, respected company.

At British Telecom we are now looking for writers of games and educational programs to help us launch a new and exciting range of software.

If we like your idea we'll send you a cheque straightaway as an advance on royalties.

Then we'll package your program, advertise it and distribute it with the care and attention you'd expect from one of Britain's biggest companies.

So if you'd like to turn your software into hard cash, simply send your program, on cassette or disk, to

FIREFLY

British Telecom, Wellington House, Upper St. Martin's Lane, London WC2H 9DL.

Review

translated, the English and spelling is good. I found only two insimificant mistakes. The style is 'user friendly' and will have even the most inexperienced producing useful sheets within a

Easy CalcResult lives up to its name; it is genuinely easy to use The commands and mathematical format are so similar to Basic that learning to use the sheet is relatively painless, assuming yo are familiar with the language. It also makes good and familiar use of the Commodore editing keys.

At £45 it is less than half the price of its big 3D brother CalcResult but maintains many of its advanced features. All that is needed to use the spreadsheet is a 64 and cassette. A disk will obviously speed things up, and a 1515/ 1525, 1520 or 1526 printer is remired for hard copy. Easy Calc also lacks the ability to add or subtract (merge) several

Easy CalcResult is an excellent product, offering the home/small business user a relatively inexpensive but sophisticated spreadsheet for the family budget or business ac-

CalcResult

CalcResult incorporates all the features of Easy Calc, and

Instead of referring to the manual a set of HELP screens can be called from disk, giving brief but concise details of the commands. These screens are very cosmopolitan, offering English, German, French, Italian, Dutch, Swedish and something

called Suomeski (Finnish? - Ed.). The border, background and foreground colours may be set individually to any available on the 64. The maths functions also include the normal

Easier disks

trigonometrical expressions.

Disk-handling is much improved over Easy Calc. A listing of the disk directory can be displayed on the screen without disturbing the sheet in memory. Disks may be formatted, and a backup copy can be made from drive 0 to 1, if you are affluent enough to own two drives. Individual disk files can be deleted as necessary.

The sheet data can be saved in

CalcResult Commands

Up to 32 sheets can be created like consecutive pages in a book. The first page format is created and copied on to the subsequent pages. At first all the pages are identical except for page numbers. Each individual page can then be edited to reflect its purpose i.e. the department or month it applies

The Display

Two pages can reside in internal RAM at one time and either one can be viewed on the screen. Alternatively the screen may be split horizontally or vertically, with different pages shown in different halves, each half being scrolled independently to compare values and results, or both screens can be

synchronised to scroll together. In addition a rectangular window can be created on the screen displaying the contents of another page. This window may also be split horizontally or vertically. By combining split screens and split windows it is possible to display the contents

of four pages simultaneously. Unlike Easy Calc, pages can be added together. There are two alternatives, the whole page including LABELS, VALUES and FORMIII.A can be added, or LABELS, VALUES and VALUES calculated by FORMULAE are added

Manipulating worksheets

How do you add LABELS and FORMULAE, you ask? Well, the contents of the first page are moved to the SUM page 32. If the next page contains a LABEL at a co-ordinate which is empty on page 32, then the LABEL is inserted If a LAREL does exist the LABELS are compared and the differences reported after the summation, the first label remaining unchanged. Formulae are treated in the same way. Pages cannot be subtracted

directly; instead the page to be subtracted must be negated and then added. Individual pages can be renumbered, deleted or cleared.

To make the most of CalcResult, two disk drives are required, 0 and 1, disk 0 holding the program and work area, disk 1 holding the page data files. Two full pages can be held in the 64's internal memory, with one in the disk's work area. The other pages are drawn from the data disk as they are required.

one in the disk's work area. The other pages are drawn from the data disk as they are required.

With a single disk drive the program, work area and data are all stored on the same disk, requiring more disk changes for

Documentation

multiple pages.

Surprisingly, in comparison with

Cheap correspondence quality:

FREU REID

the Juki 6100 daisywheel printer reviewed

The Juki 6100 has to be just about the lowest-priced daisywheel printer around at the moment – over \$100 cheaper than the Smith Corona TP1 – and has been since its introduction in May 1983. Before that, you could easily have paid out twice as much for little or nothing more.

As you're probably aware, printer prices vary a fair bit from shop to shop. But I've seen this one advertised at £378 (inc VAT) even though the maker's recommended price is £459! It pays to shop around a bit ...

As printers go, this one is fairly large (it measures 540x380x160mm and weighs in at 14kg); but then it takes paper up to 13ins wide, so the printer itself has to be big. It still manages to look rather sleek.

Jook ratner siees. Paper setting is ridiculously easy (even one-handed), and the firticion feed keeps continuous paper under tight control. It's intended, of course, for single sheets like headed notepaper rather than continuous stationery, although a tractor feed is available for an extra \$59. A word or two on the manual:

it's long and fairly comprehensive, but still suffers from poor translation from the Japanese. (Most of us are well used to that by now.) It adequately covers setting the ten DIP switches (located quite accessibly just inside the top cover) and gives detailed descriptions of the control codes and the 47 ESC (escape) codes The DIP switches allow you to set auto/manual line feed. impression level, buffer mode, character set, continuous or single sheet stationery, form length and line spacing.

Features

If I were to describe all the features of this machine I would be here all night; it's a pretty full specification – see the panel – but here are some of the more unusual characteristics.

The Juki uses standard Triumph-Adler print wheels and IBM ribbons, both of which are easily bought and fitted (not much discounting on prices, though; you'll get the best deal from an office supplies shop rather than a high street stationer). The print head is driven by a linear motor to give good positional accuracy, and that also simplifies the internal mechanism; no problems here at

all.

The front panel has three flat 'membrane' switches for form feed, pause and reset. The spacing selector switch allows selection of 10, 12, or 15 characters per inch, or

proportional spacing (means that an Y takes up less room than an m' on the paper). If you switch on while pressing the form feed button the juki does a self-sest, checking its internal RAM and printing out its entire character set until switched off acain.

The printer comes as standard with a parallel (Centronics) interface, with optional RS232 (serial). We ran it from a variety of printer adapters without any trouble, Centronics being preferable of course – much

easier to run from Commodore programs. Many functions can be programmed from the host computer - including the number of lines per page, horizontal and vertical tabs, line feed (by 1/4/in increments), column spacing (by Visin increments), plus a host of word processing functions like proportional spacing on/off, offset selection, underlining and emboldening (even underlined and emboldened text at the same time). All this for under £400? I still find it hard to believe!

On the other hand .

Minus points - in operation it is definitely on the slow side. It's rated at 17 characters per second, but it is bidirectional (the print head doesn't have to return to the left side before the next line is printed). Also, to help the printer work at a constant speed, it has a 28th suffer to increase throughput. Describe pleety of seamed

proofing it's a little noisy. But then that's true of any daisywheel

printer because of the mechanicals involved and the sheer force needed to thump a solid letter on a daisywheel stalk against the ribbon and on to the paper.

All this pales into quibbling when set against the thing's controllability and print quality, and its handling of graphics.

Pretty pictures

Graphics can be achieved by making use of the 6100's positional control. Move the print head, or move the paper, and print a dot (or any other character including a couple of right angles and straight lines), enabling plotting, drawing, or

Unde

Supp

Teler

letterheads to be produced. I found it easy to program the various characters into variables and use "Print#".

The daisywheel supplied

contains the various special symbols used in American and other European texts, including '#', \$\pi\$ and '\xi'.

So, to sum up: there's nothing cheap about the construction of this machine, it looks set to stand up to the rigours of office life, and would certainly not be out of place in the home. If you to you whether you spend the extra for more features, or go for a great little machine at an easy price. But, if you're still in doubt, try one for yourself:

Suppress the surge

by Albert van Aardt

It is late at night, and you've been working on that program for hours. You decide to SAVE it and carry on tomorrow. The weather has been very heavy, with lots of thunder. And then... a fash of lightning, and your SAVE stops dead in its tracks. That, my dear friend, was the

That, my dear friend, was the dreaded Power Surge which killed your disk. Most computers have some kind of surge suppression built in, but disk drives and tapes are a different matter all together. So what can you do about it?

Well, you can read on. This little project won't cover all extraneous electrical problems: but it could help prevent too many ulcers

And what is this Power Surge?
Well, as you probably know your
equipment is set to work
between 220 volts and 240 volts.
If something like a bolt of
lightning creates a 'surge' of
'extra' electricity on the line, the
voltage could for a split second
soar up into many thousands.

While your equipment might not burn out (although I know of cases where this has happened), delicate things might just hiccup slightly - enough to crash your

Surges can come from other sources as well – opening the fidge door, switching on a floorescent light or the TV, starting the tumble drier. Remember that slight dip the lights took when someone switched on the electric drill? Well, that was a surge – but a negative one.

In other words, power surges can mean an increase in voltage: but you could also get a decrease in voltage. (I have seen a 200 volt line registering 160 volts)

Kill that surge

So how can we prevent these surges? Well, you could buy a little black box that is guaranteed to provide a 'clean' current; and you could pay £15 to £500 for it.

Of course the more costly of these boxes also provide a

battery back-up, to give you power in case of a total power failure. But the cheaper ones don't. And anyhow, that's something else again – let's stick to surces.

I wasn't preparted to spend just as much money on surge protection as on my computer, so I asked around a bit. Believe me, you only loose a program once because of a power surge before you become worried about it! Or even worse — the data gets written away with loose bits anbd rubbish bytes in between. Ever

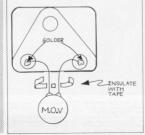

tried to LOAD a program that has a control bit in the very first line? It turned out that the Post Office also has the same problem

It turned out that the Post Office also has the same problem - all that delicate equipment in the microwave towers, and all those famous thunderstorms; well, the two just won't mix. Maybe they spend millions every

year on surge suppression? No?

No. The answer is a simple little gadget that retails for less than a quid – a lot less (like 25p?). It is called a 'Metal Oxide Varistor', and looks something like this:

Direct current generator

Just ask for a 'Metal Oxide Varistor, Siemens model SIOV-SSORESSO' at you local electronics supply shop. You then solder this little critier across the live and neutral wires of your power supply, and close any open wires with insulation tape. (We don't want a nasty little shock when we pull the plug from the wall now, do we?)

I installed mine inside a dubble-adaptor, and therefore have two sources of 'clean' power. Took me about ten minutes, and I haven't had any &&!%%5"‡ failures since!

(And thanks to Keith Wicke

Spalling Chucker chucker helbs oud

by Chris Durham

Anyone who uses a wordprocessor will know that the problem still remains of trying to find all the 'speeling misteakes and tpying errrors' before sending out a letter or document.

Fortunately there are a number of programs available to remove even this burden; we got Chris Durham to put one of them through its paces to see how useful it really is. Viza Software's Vizaspell is a companion piece to the Vizawrite word processor we reviewed in our February issue.

over those spelling checkers which require the user to build up the dictionary from scratch. Next, the program allows you to search for a world knowing only part of it. Thirtyl, Vizaspell is called from the word processor, with no reloading of files to do and without exiting from the program of the program of the property of the program of the progr

Using the program

Vizaspell is very easy to use. The disk is inserted in the drive and the program is called from Vizawrite by pressing the CBM key with shifted RUNSTOP. The program then loads into memory without disturbing either the WP

or the text.

It immediately runs an analysis
of the text in memory at the time;
and it shows the total number of
words, the number of unique
words used, and the number of

This is a spelling checker program, used in conjunction with the WP package Vizawrite. It comes on a disk (there is an option to obtain both Vizawrite and Vizaspell on the same disk) costs 667.85. For those of you who feel this is rather a lot just to correct a few spelling mistakes let me make one thing quite clear from the start; if you type more than about 2,000 words a week on a word processor, you'll find that a

spelling checker is one of the most useful programs you ever

Vizaspell comes complete with a 30,000-word dictionary which you can add to as you go along if you wish - this is a great advantage

How to create efficiency as well as text.

Go for TOTL integration

sentences, paragraphs and радов

You are also presented with a menu with a number of options; pressing f1 starts the spelling check phase. During this the words are shown in alphabetical order on the screen and a white bar indicates the current word being checked. If a word remains highlighted after being checked, it is not in the dictionary - so it's either incorrect or unknown to

Once the document has been checked you can obtain a list of all unrecognised words so that you can check the spelling if needed before editing the document. Actually correcting the

document is simplicity itself Typing CBM V (for Verify) starts a checking process which scans through the document and stops at each unrecognised word. You then have the option to Edit. Accept, Skip or Learn by typing the first letter of the required

Edit turns off the verify command - which means that, unlike the case with many such text as you like; you are not limited to just the word it stopped on. To continue the check you type CBM V again.

Accept tells the program to recognise this word if it occurs

again - in other words, not to stop at the next occurrence. Skip means ignore the word this time. but stops if it occurs again. Learn stores the word for inclusion in the User Dictionary at the end of the check. Once the check is comple Vizaspell must be reloaded

(using CBM RUN) if you require to save the 'learnt' words. This merely involves selecting the relevant menu option with the write protect tab has been removed from the disk). The new words are held separately from the main dictionary, but can be combined by running one of the utility programs on the disk.

Other facilities

There are a number of utilities on the Vizaspell disk, one of which allows you to combine the User dictionary with the main dictionary as already mentioned This is necesary because the main dictionary is held in a condensed format while the use dictionary words are held in full with about a 200-word limit.

There is a utility to create a copy of the entire disk (except the copy program itself!) or to copy the dictionaries to a second disk. This is very important to avoid losing all the dictionary should there be a disk error when undating the User

A useful facility for crossword puzzle addicts is the ability to find words which match a pattern; by loading Vizaspell and selecting the dictionary search ontion you could type 'n????? and find all the seven letter words containing the three letters in the positions shown. (But I forgot, Commodore User readers would never cheat like that -

Limitations

Like all other programs of this type. Vizaspell is unable to find a typing or spelling error which is itself a valid word. If you type "there" when you meant "their" the check will blithely ignore it since both words appear in the dictionary Likewise it will ignore most

errors involving numbers; typing 'Of instead of 'of or '9s' instead of is' will both fail to be spotted. That's a bit more of a deficiency

If you consider that you would still have to find these mistakes yourself without the spelling checker, bear in mind that twothirds of a check is better than no check at all. Until someone invents a program which checks whether what you have written makes sense (heaven forbid!!!) then you are still going to have to sending it off. (Actually, there is a program called Grammatik on 16-bit micros which claims to check your grammar though all it does is help you to avoid "wordy usages" like "prior to" for "before". It has a section that picks out "sexist" usages like 'craftsman", too! - Ed.)

Conclusions

Vizaspell is an extremely easy-touse and useful utility program for anyone who uses the Vizawrite WP program. Although it cannot pick up every possible typing and spelling error, it can save a considerable amount of time when checking large documen It is also usually more accurate than doing it by hand since it will spot many spelling errors you didn't even know were errors

Whether the price makes it a good buy depends entirely on how much typing you do. But for anyone considering purchasing both the WP and spelling checker at the same time the combined Viza Software disk is definitely go value at a cost of only £99.00 for both.

Word processing Road test

Video Pak 80 and The Word – 80 columns and more! by Chris Durham.

And now for the good news; 80 into 64 does go, with something left over! Before the mathematicians am-gast you start reaching for pencil and paper I should add that we are talking about the number of columns that can be displayed on the screen – it's now possible to get a full 80-column display from the CBM 64. How? By using the Impex Video Pak 80 cartridge; and the something left over is the free word processor and spreadsheet that come with it. We let Chris Durham loose in the world of the big screen.

(STATE OF

There are many ways of trying to one of plug overcome the limitations of a 40 plug occlumn screen when writing software no notably for word processor programs, which really processor programs, which really need a screen wide enough to are to proceed a screen wide enough to the processor programs, which really need a processor programs, which really need a screen screen are considerable to the contract of the processor programs, which really to the processor programs, which really need a processor programs, which really need a processor programs, and the processor programs are the processor programs are the processor programs, and the processor programs, which really need a processor program of the processor programs are the processor programs.

None of them is entirely satisfactory, however; and getting a system which gives a full 80 columns 'on-screen' is like a breath of fresh air after being in a room full of smokers. So, what can you do with it?

What you get

As you can see from the photograph, the Video Pak 80 cartridge (from Data 20 in the States, sold in Britain by Impex) is a neat and fairly robust box which plugs into the cartridge port of the 64 (there is in fact a new version out now in an even beeffer case, colour-marched to

the 64). A short video lead which plugs into the monitor output to enable the system to display the standard CBM screen when the cartridge is not activated. There are two five-pin DIN sockets in the rear of the cartridge; the first takes the other end of the video lead, the second is where you plug in your monitor. And the first thing to note with

this system is that you must use a monochrome monitor – it will not work with a standard TV. The output signal is not TV-type UHF; and anyway few TVs would be capable of displaying 80 columns with our obsplaying 80 columns

Neither can the Video Pak really be used with the Commodore 1701 Colour Monitor. Its 40-column mode is fine, but 80 columns are very difficult to read – especially letters like 'm' and 'w'.

No, Video Pak is designed for a standard monochrome monitor and on one of those the display is little short of excellent. I have a small Sin monitor for using my small screen like this, where the lower case letters are only 1.5mm high, in 80-column mode the letters are clearly readable some two feet away (normal wiewing distance). The only time the display breaks up slightly is when you are scrolling the text.

In use

Actually using the cartridge is easy. You can start in either 40or 80-column mode by typing an appropriate SYS command; thereafter you can swap between modes using the function keys— If takes you from 40 to 80, 85

does the reverse.

Once in the required mode you can use the computer as normal for your own programs taking full advantage of the increased screen width. There are also a number of extra functions available to help: 13 exases to the end of a line, 14 exases to the end of a line, 14 exases to the end of a number of extra the content of the content o

also a screen-dump facility (only to RS332 printers, unfortunately – not to Commodore's) using f6; and if you have the right interface, f6 will give you a terminal emulation mode.

DATA 20

Converting your own

This is a relatively simple task since all the normal PRINT commands are automatically written to the selected screen. To make full use of the 80 columns, though, you'll have to rewrite most of the print strings or you will only be using half the

Any PEEKs or POKEs in the screen area will also need to be changed; instead of the normal start address of 1024, the screen is now located between 38912" and 40958. As with the print statements you will have to reorganise the layout since you now have twice the number of

Obviously, using the 40-column mode only requires a change to

RICHARD SHEPHERD SOFTWARE

the screen address. And since there is no colour involved, colour changes and POKEs to the colour map are redundant.

There is one very useful bonus when using Video Pak 80: the ordinary screen area is still available. So you can have both the normal TV screen and the motitor working in parallel. The TV can be used for Hi-res graphics, for example, while the 80-column screen displays associated the second of th

associated text.
Pall instructions are contained in the small booklet that comes with the cartridge. Although only eight pages long it is more than adequate and explains many functions in at least two different ways.

Limitations

Although you can use your own programs quite happily with Video Pak, commercial software is less likely to be a success for a start if you can't amend these programs you won't be able to use the 80-column mode properly.

Also, the cartridge takes up

the expansion port and does not reproduce it; so no cartridge based programs can be used. No, it won't fit a four slot motherboard either, because of the short length of the video

The result is that at present you are limited to the software written especially for the Video Pak 80 by Data 20. So what's available?

• Wordmanager: a lovely little WP program, included on the disk which accompanies the cattridge at an all-inclusive price of 118.28 including VAT (there is a combined package, of which more later). Not the most used, but it has the basic facilities necessary for normal correspondence.

It formats as you type, which means that with 80 columns you liberally see the whole width of the page as it will be printed. Your document is limited to five pages of 66 lines each, which cannot be altered. Since you cannot normally print on all 66 lines you must remember to

leave gaps top and bottom of each page. You can however change the page margins, which are set initially at 10 and 74.

The program has tale, coetering and underlining — the last of these done by backspacing, which is slow but workable. There are good 'block editing' functions for moving and copying text, though these are discrepancy in the manual is that the block edit functions are said discrepancy in the manual is that the block edit functions are said to be limited to 'three full limit of text'; in fact I moved and copied any number of lines without

The 64 editing keys work as normal, with one esception. Instead of adding the space to type one character. BNST takes you into an 'insert mode' that opens up a large gap - ideal for large additions of text, but a bit amonying if all you want to do is add one letter. Still, that's better and the still still still and the still still

repacement. The small is ablequate, and linearly has a subsequate, and linear has a subsequate, and linear has a subsequate, and linear has a subsequate has above the keyboard on the 64. Each key on the top line is shown with its respective commands (which are selected by using 11 first). This makes using the WP extremely easy, using the complete beginner, since you complete beginner.

to work out what to do next.
Wordmanager allows both disk
and tape to be used for storage,
with the ability to change devices
at any time. Most disk commands
are supported – including file
deleting.

All in all Wordmanager is a delight to use provided you don't need too many fancy facilities.

· 64Calc: a spreadsheet, also on disk - up to 1,100 cells, with a total of 21760 bytes available for the data. This also comes complete with a 'command strip' and is extremely easy to use. It gives the facilities of most spreadsheet packages and can be scrolled in any direction; there is also a 'go to cell' command which will move the cursor to any cell in the memory Fields can be expressed as a 'label' (text), value or formula; the last of these includes a SUM facility to add consecutive cells together easily. Recalculation can be either

Recalculation can be either manual or automatic, the latter data 28 corporation vi.1 1234567898 1234567898 1234567898

THIS IS THE BE-COLUMN MODE AND IS EXTREMELY CLEAR WHEN DISPLANCE ON A MONITOR

Lower case is also muste readable and even a full page of text is not tiring on the eyes. The DB-column mode really makes a terrific difference to using a UP program where you can see the full width of the page on the screen all the time.

Impex Video Pak 80 - 80 column mode

amending the whole spreadsheet each time you change a value field. A model which occupied nearly all the available memory took approximately 43 seconds to do a full update; a much smaller model I tried recalculated in three seconds.

Obtaining printouts is also easy a 'print screen' function dumps the current screen to the printer. To print the whole sheet in screen format you will scroll through the model dumping each new page. To print the 'structure' of the model (without any values in the cells, just the formulae) needs only one command; this prints all the current settings and also the field types and any options you have selected.

options you have selected.

Overall I found this a very neat
and useful package for anyone
needing a small but pretty
comprehensive spreadsheet
running on an 80-column screen.

Consider our s professional

If you ever have to bring work home from the office you can now tackle it in a fraction of the time, thanks to our range of software.

With these inexpensive new programs you can turn a Commodore 64 personal computer into a fully-fledged business tool to improve the smooth operation of your calculations, filing and ordering or information storage.

All the programs are easy to learn and use, and all cost less than £50.

There's no more cost effective way to turn your home computer to practical use.

Practicale 64. The complete spreadsheet for Commodore 64. With this program your cashflow will do

With this program your cashflow will do just that.

Flow.

alphabetical entries and allows you to work out sales forecasts, long-term budgets, sales models or long term cash plans.

All in a fraction of the time they normally take.

Practicale 64 has 2000 cells, more than 20 mathematical functions, (including logarithms and roots), can insert or delete rows or columns, can 'SORT' information alpha-numerically and has a 'SEEK' function to search for specific information.

It can even display the information in graph form to allow a quick visual appraisal of the situation Disc 544 50 Clane £59.95.

> Over 20 mathematical functions. Column width up to 58 characters 2000 cells. Graph function.

Practifile 64. The database for Commodore 64.

Practifile means an end to bulky and timeconsuming storage of files, client or patient information or names and addresses.

And it means you'll no longer have to spend minutes or hours searching through piles of paper for a specific piece of information.

Each file on the program is able to handle 3,800 record entries, and Practifile can sort the files it contains by number or letter in less than a second.

The system is so flexible that you can add, subtract, multiply or divide within individual files, while its use with a word-processing system means that you

> Sorts files by number or letter in less than one second. Fully compatible with Practicals 64

software from a lpoint of view.

While Practifile means instant access to mailing

At just £44.50 you won't find a more versatile, flexible and professionally useful data-base.

Inventory 64. The quick, reliable inventory system. With its capacity of 650 items, Inventory 64 is ideal for the average small business, and means a vast improvement in the efficiency of good stock control. All you have to do is to enter each item, followed by the information which the program will prompt. That means things like part number, description,

> Handles up to 650 parts. The quick answer to stock control problems.

location, stock, year-to-date sales. re-order date, minimum quantity, vendor, list price and other important facts. From this information your

personal computer, with the help of Inventory 64, will be able to collate and assess the major points of an efficient system and be able to present you with a complete and instantaneous view of current stock

And ensure that stock control problems really are a thing of the past. Pretty good value at just £29.95. You'll find our superb range of

Commodore 64 software for professional and business use in all good computer stores including selected branches of Boots, W. H. Smith, Menzies and Laskys.

If you'd like more information about our software or require any technical help fill in the coupon or phone us on 0473 462721.

· Mail: another of the programs on the disk intended to mive (limited) mail-merge facilities. "Limited" is certainly the description; Mail is a rather nasty

American thing with states and zip codes (instead of county and post codes!) and it prints the city, state and zip all on the same line without punctuation - ugh! It can only be used to print the

address and salutation at the beginning of the letter; you can't add other information to the letter as well. It can however be used to print labels. I have to admit that it does the

job it's intended for; so use it if you must, but you may have to keep remembering the main virtue is that it's free.

Other utilities

There are a number of other programs also included on the disk; one of these is a copy program to allow you to make back-ups. Also, both the Vic-20 and the 64 versions are included for all programs: so you get the same disk irrespective of the type of machine (Vic-20 versions are available at £125.95 for the Video-Pak plus 8K RAM or £39.99 without the 8K).

Data 20 has definitely come up with a useful package of software for its 80-column board. When individual software packages nunning in 40-columns this must be good value for money.

The WORD: the real McCov?

If you want a sophisticated word processor, mailmerge program and database for your 80-column system you can buy a complete package with all these plus Video Pak 80 for only £224.25 (including VAT).

The WORD is in all practical respects the well-known (and well-respected) WP program Paperclip run over 80-columns the manuals are identical for the most part, and even the security dongles are interchangeable! Since this is the case, all the comments in the review of Paperclip (CU, March 84) apply to this package as well - with the exception that the preview facility now allows you to see the whole page and not just half of it. And in case you haven't realised,

comparing a WP program to paperclip is praise indeed. The manual that came with the eview copy was actually out of 70 date, with the result that it

contained a few errors (we're told these have been corrected in the current version). As with Paperclip, the manual is prehensive: one difference is that the Word is said to be able to scroll horizontally up to 192 columns whereas in fact it can accommodate up to 250 column That's extremely wide, but not beyond the capability of a printer like the FX-100 in condensed

The only real limitation as far as I am concerned is the fact that it formats on printing rather than as you type. This seems rather a waste of having an 80-column screen when you see virtually the same unformatted text as when running on a 40 column screen

As I mentioned earlier, at least the preview facility makes use of the full 80 columns: but in many respects I preferred using Wordmanager for straightforward letters where I could see exactly what the text looked like. This is very much a personal factor however and will not deter many people from using what really is a first-class

Inquire Pac: built-in filing

WP package.

This database program is scluded when you buy the WORD. It allows up to 200 records on disk, with up to 15 fields per record. Each of the fields can be up to 255 characters long - though that is also the maximum number of characters allowed in a record. so you can have only one field of 288 characters: or 15 fields whose combined lengths come to 255. If you wish to sort on a particular field, it must not

contain more than 30 characters Within these limitations you

can organise the data as you wish. The whole program is menu-driven and fairly easy to use Only 'fairly' easy, because you do have to know what you want to do with the data before you create the records: that's true however for most such program and is no reflection on this one in particular. Spending some time with a pencil and paper getting the record specification right first time before you touch the computer will save you a lot of _ hassle in the future

For example, I decided to limit a particular field to 30 characters: later on I found I needed to pu more than 30 characters in it, but although I could alter the contents of the field there was no way to alter the size! To do so meant creating a new file completely. Be warned: do your

homowork The sort and search facilities are quite powerful. But there's no 'hizzy' matching: you have to be very pedantic with your search remest. It's also advisable to keep a copy of your record specification handy. Although you can examine the field headings, you can't do so at the same time as requesting a search or doing a sort

Although an experienced user familiar with the record layout would not find it difficult, I would have liked the program to be a little more friendly in places. If you put a wrong answer in, it either ignores you or reverts to the main menu

As a general-purpose recordkeeping system it could be quite useful, even so. Again, the manual was out of date and contained facilities which no longer exist; but the up to date version has apparently been corrected.

Mail Merge: useful?

Unlike the Mail program, this one is very handy - especially if you wish to combine information held on Inquire Pac with letters written with The WORD: you can extract names and addresses from the database and not them on a separate file which you then run as a mail-merge file with the

This could be used for example to extract the names and addresses of only those firms who supply you with a particular product and then sending a standard letter to them

Mail Merge is easy to use and works well. If I have any reservation about it, it is the speed of the disk accesses. Sino this is a function of the Commodore serial interface system there is little that can be done; but there are so many disk accesses that at times you can fall asleep waiting ... Actually the applies equally to Inquire Pac or its own. It is one of the crosses owners of the 64 have to bear.

In conclusion

Although I have seen better database systems, none of ther will run on this 80-column cartridge: and therein lies the rub. At present you can only run Impex programs if you want the 80-column mode unless, of course, you write

Still, you could do a lot wors than buy the complete package for use as a small business system together with the spreadsheet and perhaps an accounting package as well. A for buying the basic 80-column package plus a monitor to run it on, it does seem a little expensive until you consider what you get for your money.

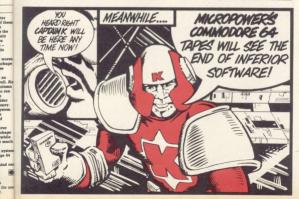

Using the 80-column system with a good monochrome monitor and a good set of software is a revelation Whether a price tag of over \$220 for the business package will make it seem worthwhile depends entirely on how much you need the facilities Whether the standard system

will appeal to the average 64 user only time will tell. Personally, I wouldn't mind or in my stocking for next Christmas!

My thanks to Theme One Records of Blandford for the us of a Commodore monitor.

The 64 ought to be an excellent computer for games — and fortunately some suppliers are indeed taking advantage of that. Others aren't. Here's this month's crop of reviews.

How do we assess games? Basically we play them - which may sound obvious, except that all the reviewers have seen so many games that they can apply a bit of comparative experience to the evaluation.

We rate games out of five for each of four criteria. Presentation means how well the thing is packaged and how good it looks on the screen: dull graphics and poor sound get marked down here. Skill level refers to how much skill (of whatever kind) is required to play the game - so if pure chance is involved, the game gets a low mark (But don't dismiss it on that: some 'chance' games are great fun.) Interest is an answer to how well the game did at maintaining the reviewer's interest in it. And Value for Money is obvious enough: it's our overall conclusion about how it compares with other games and whether we'd buy it ourselves.

Doubtless you have noticed the ads for the various Bert games and considered them undemanding. Hopning from one hexagon to another. eventually to encompass the whole pyramid, seems simple enough even with bouncing balls and a snake in nursuit.

The trouble is, there seems no spare time in which to formulate a viable strategy: the hunters are right after you and it always seems harder to make diagonal moves with a joystick. When you land on

all the surfaces are vellow, then purple and finally green. Eventually, in the interests of science, I accomplished this feat; but I aban doned play when a geezer with specs joined the fray too. There are two spinning discs which afford escape routes but they must be used with care. In practice each advance in ability invites 'one more

go".

This game is in 3D but not spectacularly so. The sonics consist of basic sound effects. To put an end to my speculation, Anirog now advertise the incorporation of the Turbo quick-load system: faster than the 1541 disk drive.LS Anirog

UNICOPY: single-sided disk copying for the Commodore 64

by Jim Butterfield

Copying programs and sequential files can sometimes be difficult. There are backup programs available, of course, but they require you to copy the whole disk, and sometimes you just want to copy one or two programs. LORD and SAVE work for simple Basic programs, but not for anything complex.

Well-equipped users have two disks, and can use utilities that will transfer from one to the other. But dual-disk utils (notably the Commodore 4040) don't quite do the job. There's a light format difference between 4040 and 1541 that makes it undestrable to write on a disk formatted (UEWed) on the other unit. Thus, a 4040-copied material to the disk.

UNICOPY will help to solve these problems. It will take your choice of programs or sequential files from the disk and hold them in memory. When you're finished, or when memory is full, you may now write the files to a new disk ... or to cassette tape!

As you scan the input disk, you'll be offered programs and sequential files for copying. You may tap the 'Y' or 'N' keys to signal yes, you want to copy this file; or no, you don't want this one. More on this in a moment.

one. More on this in a moment.
Before presenting you with a
file name, UNICOPY looks at the
stor of the file and the amount of
memory space that is left. If the
file is too big to fit, the program
will signal ... MORE: and qui
volume to the program
will signal ... MORE: and qui
volume to the the thing to the
story to t

The program will not skip by the big ones to look at smaller files later in the directory, since it might be important to you to keep a group of files in the same order as they were shown on the previous disk.

There's one exception to the 'abort on big files' rule. If the file won't fit into the whole memory buffer area, there's no chance of copying it with the program. UNICOPY will skip such jumbo files.

Buffering files

How big is the buffer area? It depends on how your Commodore 64 is configured. If it's a 'clean' system with no other

resident programs, UNICOPY will throw out Basic (temporarily) and use all the memory it can get – about 48K, or the equivalent of 193 disk blocks.

On the other hand, a program in residence - monitor, DOS wedge, interface package or whatever – must not be disturbed. In this case UNICOPY will become conservate and restrict itself to less than 36K or 144 disk blocks. The exact amount of space will depend on the other program's location and size.

You'll be asked "Any resident programs?", at the start of

programs?", at the start of UNICOPY; buffer size will be set accordingly.

One more thing: if you plan to direct the output to cassette tape. UNICOPY must ensure that no more than 28K or 112 blocks are used. There's a glitch in the tape routines that forbids writing a program from above address 32766; so UNICOPY will trim accordingly. By the way, this solves a subtle problem with cassette tape: normally, you can never save memory above hex \$7FFE because of this plitch: but UNICOPY will move the program down and save it successfully from where it is held in lower

Initial tasks and first questions

If you're copying another disk, be sure that the destination disk is formatted before running UNICOPY. The disk may already be formatted if you're just adding some new files; but if not, remember to NEW it, since UNICOPY won't do the job for you. You may copy files to more than one disk; format them all as necessary.

We've already mentioned "ANY RESIDENT PROGRAMS?";

"OUTPUT TO TAPE OR DISK?"

calls for touching the T or D key. If you select Tape, you'll be asked "WRITE END-OF-TAPE MARK?" If you respond with N, you'll copy he programs to tape and that's all.

If you answer Y, you'll copy the programs to tape and then write a special block called a tape mark. Here's what the tape mark does: at some later time, if you're searching through this tape for a particular file, the tape mark will stop the search. So if you don't find the file you want

tape for a particular file, the tape mark will stop the search. So if you don't find the file you want on tape, you won't go running through the whole tape – most of which will be blank. An unsuccessful search will terminate early, thanks to the tape mark.

"DISK INPUT PATTERNY" allows you to use pattern-matching. Tou're prompted with the asterist. If you want to see everythine, just press RETURN. But there are many other combinations. "AR" will present you only with programs that begin with AR, such as AR, ANCIERA, AND on ANDIGHT, AND CANDIGHT, AN

PLUTO.

When you are presented with names from the directory, you may yope Y or N to accept or spice the files for copying. If you want to take when you want to take know that you want to take know that you want to take way hold down the appropriate key. The RETURN keys acts to fock in the previous key, so that pressing Y, RETURN will accept and N, RETURN will accept and N, RETURN will review.

The output

Eventually the questionnaire will stop, and the computer will advise "READING FILES". The programs or sequential files will be brought into the buffer area. The programs won't be in their usual place in memory, but that doesn't matter; we just want to copy them, not to run them.

After the files are loaded, the computer will say "READY TO WRITE FILES: PRESS ANY KEY". Don't press that key yet. If you're writing to cassette, place the tape in the drive. If you have time and think it's

necessary, fast-forward and rewind the tape to even up the tension. Finally, press PLAY and RECORD and touch any key on the keyboard. The tape will start to write: the screen will go blank of course.

of course.

If you're writing to another disk, take the 'origin' disk out of the drive and put the destination disk in there. (You did make sure that the destination disk was pre-formatted, didn't you?) Now touch any key on the keyboard. As 'the files write to the disk, you'll see their names displayed. If any errors are encountered during input or output you'll se

told about them.

When the copying job is done, you'll be asked "ANOTHER OUTPUT?". If you want to write to another tape or disk, put it into the drive and press Y for 'yes'. Otherwise, press N and the job is

done.
(Note that UNICOPY does not attempt to copy USR or REL type files, nor does it try to copy 'direct' data. This type of job should be done by the programs which use these types of files.)

The generator

The listing given here is not program UNICOPY64. It is a generator program that will write program UNICOPY64 for you. The DATA statements will be checked carefully for accuracy before program UNICOPY is created for you; you'll be told of

any errors.

Type in the program. Take special care with lines 200 to 330, and don't miss the semicolon at the end of line 300! When the program is complete, place a disk into your disk drive (UNICOPY64 will be written on tr it) and type RUN.

It will take the generator over a minute to check the accuracy of your DATA statements. If there are any errors, you'll be told about them (the line number will be given) and UNICOPY64 will not be written.

will not be written.

If there are no errors in the
DATA statements, program
UNICOPY64 will be written to
disk and be ready to LOAD and
use.

(Program UNICOPY 4.0 and UNICOPY64 are already in the TPUG library and thus are public domain).

HEALTHCARE FOR YOUR HARDWARE

When your Commodore 64 seems distinctly unwell it's hard to know what to do. Which is why you need 64 Doctor.

start

type

ild of

) and

This special program will find the fault by a series of short diagnostic tests. And tell you exactly where the problem lies. Included are tests for RAM, keyboard, disc-

64 DOCTOR

drive, joysticks, datacassette, printer, audio and video displays. So as well as saving you pounds in having some-one check through the whole system for a fault, 64 Doctor will give you peace of mind.
You can give your system a check-up by visiting any good computer store including selected

branches of Laskys, W. H. Smith and Boots.

Albert's Assessment Aid: financial aid program

By Albert van Aardt

money will you have? If you increase your mortgage repayment by £30, how much sooner will the house be paid off? What's it worth to give up smoking and/or Cokes? This little program will tell you.

There are three main areas of calculations it will help you with: loan repayment, saving one lump sum, and saving on a regular basis. In each area you can calculate any of the variables for instance the time needed to

I was too bone lazy to use the proper terminology, so a 'premium' means any payment you make, be it to pay off a loan or to save money Similarly 'canital' means the money at the and of a savings term or the amount you're paying off. If you'll excuse those little errors, you'll find this program very nice to

lust a few notes on the structure lines 5-80 are the main menu; lines 100-199 calculate loan repayments; lines 200-299 calculate savings on a lump sum (also called a 'premium'): Hees 300-399 calculate savings on monthly payments. lines 600-900

No special Commodore Basic commands are used, so this program will work on Vic and 64 - and could very easily be adapted for use on other micros.

The Forth Page

one book, one tape

by Richard Hunt -

This time our regular reflection of the Forth programming language takes in two curate's egg introductions to the subject - an introductory book by the prolific Owen Bishop, and an interesting attempt by Romik to put the FIG-Forth standard on to tape

Romik has produced for the 64 (initially on tape, but a disk

The package comes with a pocket-sized manual, and as with the VIC-Forth by Datatronic it is implemented words, a two-block example application, a general messages. Some of the word descriptions are laconic in their two discrepancies present between the source code to be entered for the demonstration application and its alleged listed

Having said this, FIG-Forth is are available, and indeed a recommended by Romik

Screen

The implementation loads from displays a sign-on message. The memory map indicates that some 8K is used for the Forth operating system from \$0000 to the editor vocabulary which further ado. To my mind the first thing to do is to change the blue. This is easily accomplished n 53281 c! n 53280 c!

for background and border On a more permanent basis it

may be useful to define words background 53281 cl: (n1 ---) shorder 53280 ct; (n1 ---) colour background shorder:

I find > 9 8 colour < produces a restful and clear picture. Next I set about entering the

inexperienced Forth user to refer Essentially you need to prepare the input buffers for data entry. select one of the two available buffers, call up the editor as code on the appropriate lines

Once an editing screen is filled it must be marked as undated and saved in whatever medium is Normally this would be the disk

easy to use for quick and painless data storage because each block is identified by its LOAD<. The block may then be commands [update] and [flush] physical entry on the disk may

With a tape-based virtual memory all this is much more be entered correctly and sequence. It is vital to note the cassette counter numbers each time the cassette is started and stopped: a gap should be left

over-writing problems. Make use also of the word [empty-buffers] before entering anything to a block so that you the same before listing or loading from tane

Picking nits

The cassette acts as a counterpart in every operation to a disk unit - but also without the disk unit's all-important speed to lose patience with the cassette simply because data cannot be accessed on a random basis

Back to the demonstration caveats above. My copy of the manual contained two errors. Just in case, Block 11 line 3 should

3 p over 2 * over : And line 11 should be .

11 p reverse 13 0 do 1 colour

This displays pretty bar patterns and colours until the RUN/STOP key is depressed. implementations I have defined a number of useful words that

with specific system functions 64 I have not changed them, as for only a short time.)

much as expected. I should add that I am not that proficient with Forth to worry about what words have or have not been pre points is that if it is not there, do

The package is not too difficult to use and is reasonably good for beginners who will like the 'warm start' capability of the <RESTORE> key. I would like to have seen some use of all the temporary storage of edited

blocks to avoid unnecessary use of the cassette, for instance, which only leaves stack stack print is useful to monitor problems before they occur. For

which gives a depth of 37. More than enough I should think FIG Forth is a full-scale implementation of the language, and as such seems to fit home computers badly at the corners. I will suffer in this direction. Change it to fit the characteristics the implementation is non-

Tane vs Disk

Romik I suspect has been faithful to FIG. The main drawback is using tape as a substitute for disk - far too slow and cumbersome. It is better than nothing, though, if you don't

somewhat high for a taped difficulties. I know whose implementation I'd prefer when diskless! The choice is therefore herween standard Forth and relative ease of use. As ever, you pays your money and you takes

By now regular readers should have an idea of what Forth is and maybe why and how it can fascinate. Although Exploring Forth is designed to be a book for newcomers to Forth I shall assume that I don't need to explain fundamentals in this column: the existence of a new book demonstrates the truth of the first line of the book that there has been escalating interest in the language in recent years.

What is a beginner going to look for? First you will have invested in an implementation of Forth. You'll want to protect that investment by learning about it in a practical manner. Few user manuals are helpful in this area and a book is needed - an intelligible book that doesn't cost the earth and that can relate to the micro-cosm (sic) of the user. Better still if it relates to his

Exploring Forth is a straight-

forward book that sets the reader entering Forth words early on It is emphasised by the author that the best way of exploring Forth is to sit down at one's machine and enter things to see what happens: I am in total adreem One of the most satisfying bits of it all is putting it into practice (Computer buffs do it with their fingers! This statement has nothing to do with the review.) Each chapter concludes with an 'Explore More' section inviting the reader to solve problems. No

the way to see what happens if ... The first avenue explored is arithmetic in parallel with the stack. All proceeds well for a while: but I feel that binary arithmetic and an explanation of signed intergers in terms of two's complement is a little on the heavy side for a novice at this stage in the proceedings.

answers are given. This really is

From chapter 5 constants, variables and elementary number formatting are introduced. The interesting. Other systems and pundits rely on the [<#], [#],

new routine must be created for whichever CBM machine is in use to enable hi-res and userdefined graphics.

I was particularly interested to read about how Forth stores the items such as arrays that are created as you go along. Although I have read other books, I found Bishop's exposition rather easier to understand by being less technical. The use of [61] and [60] to explore the contents of memory cannot be over-emphasized as a worthy exercise

Loops

The chapter on loops caused me to pause. The name Fibonacchi fascinates me mainly because I can't spell it apart from that, the series of numbers that bears appeal and a suitable word is appeal and a suitable word is defined for your pleasure. The word [user-finedly] is delightfully ironic. Even if you

don't ever read the book, try entering ...

user-friendly begin ." hello" again

 and discover the true meaning of an endless loop.
 There are a number of other

goodies contained in the later pages. There are some sor routines for those who like that sort of thing; and (I assume to assist those who suffer deprivation pains) routines for formatting input and output of floating point numbers.

This raises a deep philosophical point. Forth addicts may well throw up their hands in mock borror at using simulated floating point numbers in an integer environment. Really the choice is the user's. Forth can be adapted to suit individual tastes and needs of the moment. The definition of these floating point words merely flishstrate that

The final chapter on logic is as good a presentation of the subject as I have seen. Bitwise logic for the non-mathematician

is always a heady potion: it is presented here with clarity and a practical problem solving purpose. Although that purpose is a little esoteric, again the principle can be adapted as

Conclusion

Owen Bishop has written a readable beginners book. He does not attempt to enter the debate about Forth standards: he sets out to provide material which will demonstrate and teach Forth at the keyboard.

My only complaint is the choice of Acornsoft Forth for the BBC machine. It is also unfortunate that the Jupiter Ace for which specific examples are provided has

ceased production in the time taken between writing and publishing the book. (Was fate stacked against it?)

The appendix on conversion to other systems is a little light and I see the cause of this in the emphasis placed on the two machines. A further appendix providing a list of standard words would have been a machin addition.

All in all, an enjoyable book with some good and some poor aspects. This being a column on Forth using CBM machines, you must decide for yourself whether the references to competitor machines detract from the book's value. In these circumstances I confess I would think twice before

buying it.

VIZAWRITE 64 "William of the control of the control

How to convert a 64 from NTSC to PAL

Some time ago an unhappy friend called me with this tale: "I made a business trip to the USA, and I bought a 64 for my son (which, of course, was a lie, as it turned out) and I thought that I made a bargain: the price was good and I also managed to smuggle it through the customs (thereby avoiding the Swedish VAT at a hefty 23.64 per cent). When I connected it I only got a black and white picture that was impossible to make steady. What can I do, I went to the local shop and they said that the machine is unusable in Sweden."

it in an untechnical way, there 1) We have different colour systems for video (TV) pictures. The one in Europe is called PAL (phase alternating line); NTSC (Never twice same

(B) and (C). Locate the IC called U19 in the (C) area - (C) may have a cover which you will have

U19 is a 40 legged integrated '6867'. Remove this IC. preferably using a special tool (two small screwdrivers may do the trick if they are stuck in under the IC at its short sides) Please remember the direction of the IC. usually marked with a small slot on one of the short edges. Now push in your new 6569, in the same direction! The leas may have to be bent somewhat inwards to fit the IC holder properly. Check that all the legs are exactly above their holes; then push evenly over the whole IC trying to get all the 40 pins down into their holes at the same time (otherwise the legs may be

Locate C70 in the same area

(C). Desolder the present one and solder the new one there instead. Just beside it you find the crystal: change that too.

Now there is only one more thing to solder and that is the jumper wire, also in the (C) area In case of an NTSC 64 the jumper mes hetween the letters F1 and E3, printed on the board, Desolder the wire and move it to the adjacent position, between markings 'PAL' and 'E2'.

Now we shall remove the cover of the modulator (R). It seems that the cover is soldered on one point on most machines I loosened in a special way dissoldering with one hand peeling off the cover with the

After all this is done it is time to check everything. Make sure that there are no leftover wires and other things that can cause short circuits on the PC board (in is not necessary to reconnect the keyboard yet). Now connect the power supply in both ends and switch on the computer. You should see something that may

ecome a colour nicture Locate a trim potentioments R27 in the (C) area, near the crystal: turn it gently. Now it

should be possible to get a stable colour picture If you are dissatisfied with the picture you have to go to the modulator (B). Inside there you can see some trim points: they look different but all have a slot for a screwdriver. These should be turned by a very small screwdriver made of nonmagnetizable material, for

instance plastic or copper. Go through the trim points one by one, turning them carefully to either side of their original position: and watch the screen. You should find that one of those controls optimizes the picture. Some 64s have a control called R25 which shall also be tried and turned to optimized position.

Then maybe the previous control has to be readjusted again because those controls interact: but finally you will get a good picture. Just do it methodically, and do not rush Always keep track on how many

turns you do in either direction

Do you have any sound? Connect your keyboard - swit off the computer first. Load a program with sound or make some POKE statements to produ a triangular wave (see manuals) If there is no sound, or it is distorted, it's time to try and tri those points in the modulator which did not appear to have a effect when you antimized your picture. When doing that you should be able to optimize the

If by doing this the nicture deteriorates again, you should go once more, and then the sound again, until everything is okay. Now put the whole thing together again in reverse order

mo to readers in France is procedure should also ork to convert a SECAM 6 o PAL Ed.

CBM 64 & VIC 20 CENTRONICS PRINTER INTERFACE VICSPRINT 2064

INC. VAT (£1 P&P)

SMITH CORONA TP1 PLUS VICSPRINT 2064

£299.00

INC. VAT (CARRIAGE £7.50)

- *** A smart cartridge which plugs into the user port of either the CBM 64 or VIC 20, with a cable connecting the serial IEEE port on disc drive or computer plus a ribbon cable with 36 way centronics plug to plug into vour printer
- *** Looks like 'standard' CBM 64 or VIC 20 printer (without graphics). *** Leaves cartridge port free for cartridge based software.
- *** Totally 'system software transparent' (try using a ribbon cable adaptor with 'Vicwriter').
- *** Works with 'Easyscript', 'Practicalc' etc. and a large range of printers including Juki 6100, CP80, Gemini 10X etc., etc. *** TWO YEAR GUARANTEE As manufacturers of this product we can offer
- a guarantee of two years with the utmost confidence. *** Please confirm your requirements and suitability with us before
- purchasing *** Ribbon cable version available price £17.50 inc. VAT (£1 P&P) works with
- several packages but requires software adaptor tape to do listings etc., (£7.95). *** Overseas price (£43.43) add £3 P/P, or £1 for B.F.P.O. orders.
- *** AVAILABLE FROM THE MANUFACTURERS:

RAM ELECTRONICS (FLEET) LTD.. (CCI) 106 FLEET ROAD, FLEET, HAMPSHIRE GU13 8PA Telephone: (02514) 25252.

Callers welcome Monday to Saturday (closed Wednesday)

The £1,000 competition winner

were entirely correct. But Peter was one of those who got only one of the Part One questions wrong; and his Parts Two and Three answers were thought very good. He came up with the only re-tellable computer joke out of the lot (embellished into a shaggy dog story)!

The joke

A man carrying two heavy black suitcases is stopped in the street by another bloke who asks him for the time. Man puts down suitcases and pulls back sleew to reveal a tiny black watch. He presses the button and the top slides open to reveal a miniature microcomputer. He says to it "Time?": a faint whirring as the miniature floppy disk loads in speech recognition program click or two as the heads engage, and the watch glows

"Which time?" it says in a thi but perfectly modulated BBC unice "Greenwich Mean Time British Summer Time, French Summer Time, Pacific or Eastern

"Greenwich Mean Time interrupts the man. "Ok" says the watch "But I'd rather do half-life calculations for sub-atomic particles. By GMT it's ten fifteen and 30,0047 seconds. Or at least it will be when I've finished talking." "Thanks" says the man,

and he presses the button again "My God!" says the bloke who asked for the time. "That's really amazing! I've never seen a computer that small - can I buy the watch from you?"

explains that it's a prototype one off, but after much pleading he agrees to part with it for £2,500 and the bloke's two-week

POST TO KIWI COMPUTER ACCESSORIES LTD

Teach-in

Lionel Carter and Dr. Era Huzan are both highly qualified academics. .ais is reflected in the very formal approach that you get in their Teach Yourself Computer Programming With the Commodore 64.

The book is biased towards data processing (just like Commodore 64 Computing by Ian Sinclair which I reviewed in the October issue,

64 Computing by Ian Sinciair which I reviewed in the October issue, but driving the recent for because or platrous editors toper about but driving the recent for because or platrous editors toper about proper of data, and the need for good programs design. I was glide to see a section on Bondaria, a subject which seems to have gone out of fashion these days. Flowcharts, lead logically on to branching and loops, which should in turn lead not undrousnes and arrays. Instead there is a rather weak chapter on colour followed by one on the 64's machematical functions (which is almed around the O Level Maths mark)

U.De'ver Datates maxery, and subsportions fittilly do acrine and are worsh the west. The concept of multi-dimensional arrays is aimsily and clearly explained. But then muddled upon pump two chapters on spride and sound. Multi-coloured sprites are covered and the section on sound makes sound (olimicod - Ed) use of subroutines, although the SID chips into really exploited.

Next several interesting and serious application programs are discribed and listed — mortgage interest, experimental data proces ing and linear regression. The use of disks and printers is include together with a detailed explanation of disk commands and a usel together with a detailed explanation of disk commands and a user name and address program for the primer. The final two chapted deal with the creation and use of sequential files on disk and tap and processing the data thereof, a simple but apparently con prehensive stock control program is used as an example. The book's a little disjointed with chapters on colour and sound ay pearing out of sequence, but all the information is there. It is aims

pearing out of sequence, on a time insolution and the serious home and business user, and does not attempt to explain the many advanced technical features of the 64: game graphics and sound enthusiasts seeking clues to the inner secrets: their computer should steer well clear. The majority of the chapter set relevant programming problems for the reader, and model as swers are provided in an appendix if needed.

swers are provided in an appendix if needed.

To get the most out of this book you must work at it, followin
the examples and problems set: the result will be a better a
preciation of structured propramming techniques and a non
methodical approach to problems. At £2.75 this A5 paperhac
with its 200 pages of good quality paper and print is excelle
value for money.

The Book

The Publisher:
The Price:
The Reviewer:
The Conclusion:

The pirates return ...

Its of paramount importance to everyoee within the software industry, be it on the development or advertising side, to stamp out software piracy before it completely oversteps the mark and there is no software industry.

One way magazines in particular can be of assistance would be to stop the user group lists in the magazine now before it is too late.

Microdeal Ltd. 41 Truro Road, St. Austell, Cornwall PL25 5]E. This circular came with a copy of a letter from one of Microdeal's customers who had found an Irish 'club' selling what were obviously bootlegged copies of its games.

Now that kind of thing we have no difficularly at all in condemning as illegal, unethical and - in the long run - counterproductive. (Microdeal's games aren't at all bad, but if Microdeal can't afford to do them they're

denied to the rest of us).

As for listing clubs, one of our functions is to provide information. Hopefully it's good information, but we can't check the credentials of every club we list. We certainly would not continue to publicise any

obvious rip-offs – whether it's the legit software suppliers or the pirates.

... Walking the yard

Your reaction to our letter regarding piracy is symptomatic of the ostrich-like mentality that afflicts our industry. You have totally failed to grasp the nature and magnitude of

Our market research reveals that games-playing school children typically own in excess of 100 games, all copies. If you would like to see our market research forms actually filled in by these people it might bring the facts of life home to

The criminals responsible for pop and video piracy have turned their attention to game software. The counterfeits they produce are indistinguishable from the real thing and flood the market almost as soon as a new game is released. We can show you examples of counterfeits and the technicians' recontracted to identify them.

The result of home and school and computer club piracy alllied to lilegal counterfeiting is that sales of new products dry up within a mouth of launch. This means soft-

PIRATES!

The great debate on the high seas of the software industry rages on. The good ship Commodore User repels a boarding party of trate software houses and acquits herself nobly. Now read on ...

ware houses are not getting the money they need to produce new products; your readers suffer produces the produce new produces your readers suffer the produce new they have been produced as the software houses can no longer afford to advertise as much. Soon here will be an avalanche of software houses going out of business. After the sort-on-there will be an avalanche of software houses selling far more software houses selling far more will be well as and to failly copy.

proof) and there will be less magazines. I hope you have the courage to

publish this letter.

B.C. Everiss, Operations
Director, Imagine Software
Limited, Tithebarn House, 1-5
Tithebarn Street, Liverpool,
Merseyside L2 2NP.

To restate our position on piracy of programs: we're against it. We're not against taking back-up copies, but then who needs a back-up copy of a game? In other words, the large-scale distribution of ripped-off products is the cause for which we'll join Bruce Everiss on the barricades.

But we're yet to be convinced about the flood of software houses beating down the doors of the Bankruptcy Court. All the failures we know of in the last 12 months have been due to other causes business and management factors, like not having enough cash behind them and knowing damn-all about marketing; or more reprehensible concerns like the supplier ripping us off with crummy products, or banking the cheques and then disappearing.

The original letter to which Bruce refers invites the computer press to start a concerted campaign against copying. Specifically it demands we ask for laws creating "harsher penalties", we expose the copying clubs, we "filter out" ads for the privates' products.

OK, then. We already do try to kill adverts for copiers before they appear: but since we don't get to see most of our ads until a few hours before our deadline, we can't guarantee to do that. Anyhow, it would be a bit arbitrary: we like the idea of a 1541 backup program to take security copies, we dislike the idea of a disk copier to run a mail-order bootleorine business.

We do our best. We also refuse ads featuring naked people with big tits, ads for smuff movies, and ads for political parties.

And we'll try to "expose" the copying clubs if we get to hear about them. Again, though, it's hard to spot the duff ones amid all those bona fide clubs.

As for changes in the law,

I'm not sure that the guillotine is the right answer for a group of 15 year-olds who all want the Complete Jeff Minter Collection. There are laws available right now, and damn few tape-copying prosecutions have been done under them. Still if Mr Everiss wants us to campaign, we don't mind chipping in:

Dear Mr Brittan, Can we have a law to protect software houses against tape copying please? Thank you.

We're not being facetious about this. We do understand the suppliers' point of view: but quite apart from their willingness in the first place to enter a business where they knew that tape copying would be a fact of life, we dislike the idea of using a JCB to stamp on the company of the company of the public will be a fact of the problem.

Our other objection is to blackmail, which brings us to...

The Anti-Press Release

In association with a number of similar minded software houses, PSS has taken a positive step in the prevention of home copying. The action to be taken is the threatened withdrawal of all advertising support from any journal carrying advertisements for tape or disc comisers.

The software houses concerned PSS, CRL, Anirog, Silversoft, Interceptor, Microdeal and Visions – have all agreed to adopt a similar approach on the subject, as a show of solidarity in the prevention of pi-

Gary Mays of PSS said, "There shouldn't be the need for such devices. We offer a replacement tape or disc should either fail to load, and I would have thought that this was sufficient".

It is hoped that many other software houses will support their colleagues in this matter, as this is one of the first major steps to be taken in the obliteration of piracy.

Gary Mays, PSS, 452 Stoney Stanton Road, Coventry CV6 5DG.

Now, this was a press release.
Or a distinctly unveiled thrity, depending on how you look at
it. It repeats the more
delicately-worded Guild of
Software Bouses letter in our
June issue (can't these people
get together on their mediabanking?) wherein a survey of
ournals was promised to see
who was toeing the line on
refusing conject advertisements.

refusing copier advertisements. We do refuse such ads, when we can spot them: if they slip by, they won't be run again if we can help it.

But we're not happy to be tarred with whatever broad brush the software houses are wielding. The computer press isn't one homogenous organisation with common standards and shared policies any more than the software houses are. This kind of the generalised warning to The Computer Press files in the faces of reality.

So let's hear some specific cases, can we? And let's have a bit more understanding of how journalists, editors and advertising sales people actually work.

Write away

This is your page: normally we write for you, but here we listen. Feel free to let us know what you think - about the magazine, about Commodore, about suppliers, about life, art. the meaning of existence or whatever. We don't print everything we receive of course but anything that might be of specific relevance or general interest will make it to these pages.

Clubland Update

Maybe you would be kind enough as to mention CLUB64, which could be best described as a Commodore 64 software user croup, in a

As we have not yet fully decided the range of services that we should offer to our members we are seeking constructive suggestions. It should be mentioned that we have a particular interest in hearing from users who cannot attend club meetings because they are living in remote parts or because they are disabled or even

We have already established a library of high-quality public domain programs most of which have been checked and debugged. At present ten disks are available and every one of them includes between ten and fifteen programs which may be copied and distributed to friends, members of user groups, schools etc. We hope to add at least two disks per month and maybe, if we get enough suitable material, issue a regular news-

All 64 users with disk drives are invited to make use of our library. For anyone who only wishes to use the library there will be no membership fee but there will be a charge of £5.00 per disk. This includes the cost of packing and postage to any part of the British Isles (postage to other parts of the world will be extra) and the overheads involved in obtaining and

As we are a non-profit making group we do not, at present, have the manpower or resources to enable us to make programs available on tape but if the demand is great enough for such a service we will 100 try to find a way.

We are interested in obtaining news, information, product details, programs or any information suita ble for inclusion on our proposed disk newsletter - would it be possible for software producers to supply short samples or trailers for inclasion on our disks?

Brendan Conrov, 85 Upper Drumcondra Road, Dublin 9,

... And new date

I am writing to you to inform your readers of a new club which I have started. The Club does not intend to become commercialised but has been set up to give more to the minority group of 32K Vic-20 own-

M. Valentine, The 32K Vic 20 User's Club, 101A Underdale Road, Monkmoor, Shrewsbury, Shropshire SY2 SEF.

Hands across the ocean

I would first like to congratulate you on a great magazine. I have been subscribing from the Christ-

mas 1981 issue of Vic Computing. One small criticism though: I don't like the way you say 'suitable for the kids' when you get an unsophisticated game. That's ridiculous. The only people who would like those games are people who have never seen anything of the sort and are absolutely fascinated

In Barbados we use American computers, TVs etc. I recently acquired a 64 after previously owning a Vic-20, and I have a Zenith television which produces screen flutter which I controlled (on the Vic 20) using POKE 36864.133. But I haven't figured out how to perform the same operation on the 64. HELPI

I have Simon's BASIC which I ought for \$26.00 US. I have only found one bug: the COPY command produces an array of weird ters which if they were sent to the Pentagon they would spend a year decoding them. Apart from that it is an excellent program. I typed in Lightspeed and found it

mite a mood name except for one thing. A player can stop the movement of the other by holding down a key. This can be remedied by using 2 joysticks or 1 joystick and keybord and deleting the GOTO160s in the check keybord routine though.

Andre Gibbs, 3 Adams Castle, Worthing P.O., BARBADOS.

Vicsoft hard

In previous issues of Commodore User you have asked for readers comments on what we think of Commodore and its back-up service. Try this for size; the ultimate adjective I leave to you and your readers

In May 1983 I bought a Commodore 64 and immediately sent away my registration form. By return of nost I received confirmation of my registration and a Vicsoft

On 15 September 1983 I sent off my first order for Vicsoft Membership, Sprite/Graphics Editor, Know Your Own Personality and Money Manager - total cost including VAT I received by return of post my

membership card, plastic computer cover, plastic disc box and an invoice stating that the three tapes were to follow

At the end of October I received the Know Your Own Personality tape, but no explanation regarding the other two tapes.

On 30 Nevember 1983, I received a second copy of Know Your Own Personality, with no ex-

planation why or the whereabouts of the other two tapes At this stage I rang the Vicsoft of

fice (when I could finally get through) and spoke to a Miss Heidt lones. I explained the situation tit date and asked what procedure to adopt with the surplus tape. Shir advised me to send the unwante) tape back and they would refund the cost of postage. With regard in the two tapes outstanding, sh would investigate and ring me

I sent the unwanted tape back immediately - recorded deliven at a cost of £1.20. I also sent a letter at the same time, detailing this events to date and asking for an estplanation regarding the two out standing tapes. Both my telephone call and my letter were ignored a heard nothing and received notig

On 15 December 1983 I decide to speak to the Manager in persop a Mrs Shaw. She knew nothing about my case personally, but sho did know they were having probe lems with the Money Manager and this would be about 2 to 3 weekis Regarding the other tape and re fund, she would investigate anir

By mid January 1984 I had heare nothing and received nothing a rang Vicsoft and asked to speak to Mrs Shaw. She either could not ou would not speak to me but passen me over to a Miss Jane Lunn. She knew nothing of my problem sod had to start from the beginning la explained the situation to date. St said they were having problem with the Money Manager and the would be about 2 to 3 weeks. R this and ring me back

She did indeed ring back to say that they were not out of stock (in

ack to sat Twothings compel me to write, the of stock of first of which I hope will warn others of the hazards and love of -

In November I ordered a selection of polymers from Vicenty a Commodora subsidiary believing any order to be fairly safe. In lanuary, after advice from Vicsoft of delays in delivery of all the items on order, the first began to arrive. One item failed to arrive by mid Feb. mary: and one was defective. A second copy failed to load. By mid March I had at last after many letters managed to get a refund for the non-delivered item However Vicsoft have ignored all letters re-

lating to the defective program. In marked contrast, on Sunday I relephoned an order for Flight Path 737 for my Vic-20 to Anirog. Five days later (and one a bank holiday) this highly recommended product arrived. Congratulations and well done. Anirog: Vicsoft could learn

Finally I must praise and criticise Commodore User. Today I received my copy of your excellent magazine: but as a subscriber why have I had to look longingly at May's issue on my newsagents shelf for the past eight days while I wair? Surely your first copies should be delivered to subscribers and not rushed to the shops? If this continues I shall obviously be seriously considering my subscription your or your competitors volumes from my newsagents.

Keep up the good work but please, post first and keep your

K. Moore, 28 Rachael Close, Fair Oak, Eastleigh, Hants. SO5

We've had a number of complaints about Vicsoft, and since Commodore hasn't chosen to respond to our letters requesting a comment it's about time some of these complaints were aired. It is worth pointing out that

Vicsoft is a big operation: statistically a small percentage of foul-ups are to be expected, and the bigger the sale the more people will fall into the Suffering Minority category. That's the kindly view,

anyhow. No comfort at all to the sufferers, I'm afraid. We're preparing a piece on what kind of legal redress you have against non-delivery or non operation of any product. homing in particularly on mailorder houses. But they come and go like the tooth fairy: like the disappearance of Anik a few weeks ago left many people stranded and their chemies cashed without

products having been despatched...

As for the discrepancy in deliveries between subscription mailings and the newsstands. I'm afraid that's an uncomfortable fact of the way magazines like us operate. Ten days before publication we

HAVE to give copies of the magazine to the company who supplies the middlemen who supply the retailers: in most

distribution takes nine or ten whole days. But sometimes, in some areas, some of those middlemen can get the copies

to the newsagents a lot faster We're looking into this and will be trying to ensure a better service for subscribers versus newsstand buyers.

Applause always welcome

I have just purchased my first Commodore User magazine and I wish you to know that I am yery impressed. I have read it from beginning to end and contrary to some comments from your readers, I find the information and lawout above that which I normally find in other magazines. Perhaps they would change their minds if they read the vast amount of rubbish I read in

Keith Worsley, 4 Windy Grove. Wilsden Bradford BD15 0L8

ArFon anast

I am writing in to warn your readers of a potential danger concerning the Arfon Expansion unit for the Vic-20. The dangerous situation arises when the unit is being used in conjunction with the original Vic transformer in order to give access to the user port. If the original Arfon user port is inserted, the 9 volts ac given by the Vic through the user port is applied to the Arfon transformer and the neon light on the Arfon unit will glow.

If the Arfon switch is then made to connect, the transformer is con nected and the plug on the end of the Arfon lead becomes live.

be to keep the Arfon switch off, for the setup of the Arfon unit would prevent the expansion board from working if anything were done to rectify the problem. The situation is an unfortunate fact for which Arfon are not to blame, but perhaps they should warn people about it in the documentation?

There is also another less important danger of the Arfon unit - if the actual expansion board is connected to the Vic when the system is operating from the Vic transformer only, the fuse in the Vic will

... copy of a bouquet

To: RAM Flectronics (Fleet) Ltd. Hampshire. GU138PA

I am writing to thank you for service that can only be described as superb. I posted my Vicsprint to you on a Friday, enclosing a note with a brief description of the fault. and an apology for having taken the unit apart to shorten the lead.

I had hoped that you would be able to repair it fairly quickly, but I had no idea that the following Wednesday I would receive, by recorded delivery, a brand new Vicsprint complete with updated instructions. This level of service goes way beyond reasonable expectations and deserves an acknowledgement. I am sending a copy of this letter

to Commodore User in the hone that they can let their other readers know that yours is a company that does not lose interest in their customers after their initial purchase.

John Elliott, 96A Fore Street Saltash, Cornwall PL12 6AF.

Printing by numbers

I have been trying to discover a better method of listing numbers so that the decimal point is always in the same column. The method used hitherto has been to convert numeric and integer variables to string variables and then determine len(\$).

However, I now find that if the log, of the number (x) is divided by log(10), it produces an integer value equal to one less than the number of digits in the integer of

This appears good for all numbers with a maximum of two decimal places, in the range of .01 to 1M+ and is therefore suitable for

The following program demonstrates the principle, the 'meat' being in line 30 which can, of course, be used in any program.

Disk tin

The following information may be of use to your readers, especially those who are contemplating the nurchase of a Commodore 1541

According to the manual, the sample programs issued with the drive, the word processing packare FASYSCRIPT and all other published material that I have investigated, an already existing file on a disk may be overwritten by a file of the same name by using the SAVE "@FRED".8"

What the aforementioned documentation omits is the information that using this command may destroy other files on the disk tents of "FRED" When challenged with this Com-

modore replied: "There is a problem with the SAVE@ command. The command seems to overwrite existing records on a disk if the new program is longer than the first. The only way to overcome this problem would be to delete the old file first and then re-save or save the new file under a different name and then erase the old file and re-

A number of new disk commands were also supplied by Commodore. These commands are listed here as they are not deperihad in the 1541 manual and do slightly simplify the rather tedious save-and-replace sequence described.

Introducina MusiCalc The Creative Music System

MAKE MUSIC PLAY

On Your Commodore 64" Put the MusiCalc* diskette into your Commodore 64 Sit down And brace vourself

You're about to discover an entirely new way to make music. With Musi-Calc. the creative music system that makes music play. Almost instantly, the whole family will be able to create and perform all kinds of music. From rock 'n roll to technopop, from classical

MusiCalc makes music more fun more rewarding and easier than it's ever been before.

NOTEWORTHY SOFTWARE

MusiCalc software turns your Commodore 64 computer with disk drive into a sophisticated musical instrument. And it turns you into a

composer, performer and conductor. MusiCalc 1's Synthesizer & Sequencer is the heart of the system. With it

to play your favorite tune. The computer screen will show you what the music's doing as you play and how to control it.

Start by selecting one of MusiCalc's a preset sound you like. Choose the scale you want to play in-anything

from jazz to Japanese. Presto! You've got music

Exercise your musical creativity by way you want, and playing whichever parts you'd like. Make changes and

own compositions Even a musical novice will sound good right away. And the greater you musical talent, the more challenging and exciting MusiCalc becomes.

BACH TO BASICS

Although simple to learn, MusiCalc was designed to meet the needs of procapabilities professionals have spent thousands of dollars for-up until now. Once you have the Commodore 64 computer and disk drive, you can get started for under \$100 with the Musi-

Calc 1 Synthesizer & Sequencer. This is a standalone software program you'll never outgrow. And with the variety of other MusiCalc products currently available, plus the many more items Waveform will be can expand your music system along with your interest and ability.

THE MUSICALC SYSTEM MusiCalc includes a full line of software that brings great music as close MUSICALC 1. Synthesizer & Sequencer Turns the Commodore 64 into a sophisticated musical instrument-a three-voice synthesizer and

fully-interactive step sequencer. Play along with a song or write your own. Develop your own instrument sounds. And record the music you create.

MUSICALC 2. ScoreWriter " Works with the Synthesizer & Sequencer

to change your musical improvisations into musical notation. With the addi-

music. Requires MusiCalc 1 to operate. MUSICALC 3, Keyboard Maker Enables you to create your own custom musical keyboards. Comes with over 30 preset keyboard scales from around the world-everything from classical to rock. Requires MusiCalc 1 to operate. MUSICALC TEMPLATE 1. African and Latin Rhythms Add this to the MusiCalc 1 system and it provides you can play along with or use to

MUSICALC TEMPLATE 2. New Wave and Rock Works like Template 1

and features the latest Technopop scores and sounds, Requires MusiCalc 1 to operate.

MUSICALC

FREEADS

The lack of a classified ad section in Commode User is an obvious omission. So we're going to regular Classified page – and for the average re it will be entirely FREE!

How to use the Classified Ad section:

How to use the Classified Ad section: First tick the box under which you want your ad appear: indicate how many times you want it to appear (one or two): then write your ad, using or word per box. The first word well be printed in h

word per box. The first word will be printed in l ype.

If you want an ad in one of the FREE sections, can have up to 30 words – though they'll have to neclude your name and address.

When it stops being free:

When it stops being free:
If you want more than 30 words, each addition
word will cost you 7p per insertion.

word will cost you 7p per insertion.

If you want a box number - that is, we collect replies and forward them to you - that will cost ;

5per insertion. Don't bother to include the Box as part of your ad: just tick the Box No' box.

When it's not free at all:

Only individuals or user groups can have a FRE if you're a company or some other profit-making operation, contact the Ad Department for rates (241 2417). That also applies if you have a production of the profit o
