## 1526 MANUAL CORRECTIONS

The following are corrections to the 1526 Printer Manual. The information is shown in the form it appears in the manual, followed by its revised form, with the corrections highlighted.

**Special Note:** All example programs in this manual using the PRINT # command should be corrected to show no space between PRINT and #:

Incorrect: PRINT #

Correct: PRINT #

PAGE 1

### Interface

Your printer is designed to connect directly into your computer through the Serial Port (6-pins). However, you can connect your printer to as many as 5 VIC disk drives by daisy-chaining. Daisy-chaining means connecting 1 peripheral to your computer and plugging additional peripherals into the Serial Port of the last item connected. For more information about Serial Port specifications, please refer to the Serial Bus Section in your Programmer's Reference Guide.

REVISED FORM

### Interface

Your printer is designed to connect directly into your Commodore computer through the Serial Port (6-pins). However, you can connect your printer to as many as 4 Commodore Single disk drives by chaining. Chaining means connecting one peripheral to your computer and plugging additional peripherals into the Serial Port of the last item connected. For more information about Serial Port specifications, please refer to the Serial Bus section in your Commodore Programmer's Reference Guide.

PAGE 2

### Paper Feed Mechanism

The Model 1526 Printer has a FRICTION/SPROCKET feed mechanism that uses sprocket holes to hold the paper edges. This model is especially useful for printing business forms. See Figure 1.

Normal paper without sprocket holes can be used, too.

REVISED FORM

### Paper Feed Mechanism

The Model 1526 Printer has a FRICTION/TRACTOR feed mechanism that uses sprocket holes to hold the paper edges. This model is especially useful for printing business forms. Normal paper without sprocket holes can be used as well.

PAGE 10

NOTE: In standard Commodore BASIC, the PRINT command can be abbreviated as a question mark (?). You may not do this with PRINT #. It must always be typed out as PRINT #.

REVISED FORM

NOTE: In standard Commodore BASIC, the PRINT command can be abbreviated as a question mark (?). You may not do this with the PRINT# command. The abbreviation for the PRINT# command is pr (p SHIFT R).

50 NEXT
60 CLOSE 2:CLOSE 1
    
```

PAGE 21

Example:

```

10 OPEN 4,4
20 OPEN 1,4,1
30 OPEN 2,4,2
40 OPEN 3,4,3
50 A$="999 999 99.99999999          99.99999999"
55 PRINT #2,A$
60 PRINT #3, CHR$(60)
70 PRINT #4, CHR$(147)
80 FOR I = 1 TO 99
90 PRINT #1,I;I*I;SQR(I);I (1/3)
100 NEXT I
110 PRINT #4,CHR$(19)
120 CLOSE 4:CLOSE 3:CLOSE 2:CLOSE 1
    
```

REVISED FORM

Example:

```

10 OPEN 4,4
20 OPEN 1,4,1
30 OPEN 2,4,2
40 OPEN 3,4,3
50 A$="999 9999 99.99999999          99.99999999"
55 PRINT#2,A$
60 PRINT#3, CHR$(60)
70 PRINT#4, CHR$(147)
80 FOR J = 1 TO 99
90 PRINT #1,J;J*J;SQR(J);J*(1/3)
100 NEXT J
110 PRINT #4,CHR$(19)
120 CLOSE 4:CLOSE 3:CLOSE 2:CLOSE 1
    
```

The program shown in the printout in the next example writes the Commodore logo ten times. It creates a string with the CHR\$ value of the column totals and passes the string to the printer with **sa** = 5. To achieve upper- and lowercase characters, use the CRSR Up (Cursor Up) for uppercase characters, and CRSR Down (Cursor Down) for lowercase characters.

**Example:**

```

10 DATA 28,34,65,65,54,34,0,0
20 OPEN 5,4,5
30 FOR I=1 TO 8:READ A:A$=A$+CHR$(A):NEXT
40 PRINT #5,A$
50 OPEN 4,4
60 FOR I=1 TO 10
70 PRINT #4,CHR$(14)CHR$(254)"  C  OMMODORE  B  USINESS
    M  ACHINES"
80 NEXT
90 CLOSE 5
100 CLOSE 4

```

## REVISED FORM

The program shown in the printout in the next example writes the Commodore logo ten times. It creates a string (A\$) with the CHR\$ value of the column totals and sends the string to the printer with **sa**5. To achieve UPPER and lower case characters, use the CRSR up  for upper case characters, and the CRSR down  for lower case characters.

**Example**

```

10 DATA 28,34,65,65,54,34,0,0
20 OPEN 5,4,5
30 FOR I=1 TO 8:READ A:A$=A$+CHR$(A):NEXT
40 PRINT#5,A$
50 OPEN 4,4
60 FOR I=1 TO 10
70 PRINT#4,CHR$(14)CHR$(254)"  C  OMMODORE  B  USINESS
    M  ACHINES"
80 NEXT
90 CLOSE 5
100 CLOSE 4

```

**Setting Spacing Between Lines: sa = 6**

A secondary address assignment of 6 controls the number of steps between successive lines of print. There are 144 steps per inch, so a declared value (  127) of 18 produces eight lines per inch. A declared value of 72 produces lines spaced one inch apart. The default value is 24, which produces the standard 6 lines per inch.

## REVISED FORM

**Setting Spacing Between Lines: sa = 6**

A secondary address of 6 controls the number of steps between successive lines of print. There are  216 steps per inch, so a declared value ( ≤127) of  27 produces eight lines per inch. A declared value of  108 produces lines spaced one inch apart. The default value is  36 which produces the standard 6 lines per inch.

**Example:**

```

10 OPEN 4,4
20 PRINT #4,"(CRSR UP) C (CRSR DOWN) OMMODORE"

```

**Example**

10 OPEN 4,4  
 20 PRINT #4, "SHIFT CRSR c CRSR ommodore"
