

COMMAND SUMMARY CARD

PROJECT FIRESTART™

Project Firestart...

began on February 13, 2066, aboard the research ship Prometheus. Financed by the System Science Foundation (SSF), an agency of the United System States (USS), the project's goal was to produce strong, durable laborers capable of helping Belters mine titanium and iridium on selected moons and asteroids.

Although first generation genetic reshaping is extremely hazardous, it was allowed because the geneticists involved were required to follow strict safeguards guaranteeing tight control over the experiment's end product.

But the Prometheus no longer responds. The safeguards must have been breached. If they have, Firestart is out of control. The SSF has assigned you to clean up the mess.

Getting Started

1. Place the boot disk (Disk 0) face up in the disk drive.
2. Turn on your computer and type **LOAD"EA",8,1**.
3. After the game loads, you'll see background information about the game and be briefed on your mission. If you have trouble loading the game, disconnect any peripherals from the back of the disk drive (i.e., the fast loader, second disk drive, or printer) and try loading again.
4. Follow the onscreen instructions to either review the introduction or begin play.
5. Switch disks whenever the computer prompts you to.

(Note For C128 Users: Be sure your computer is in C64 mode.)

Joystick Instructions

Plug your joystick into port 2. The joystick controls which direction you move and aim your laser; just move the joystick in the direction you want to travel or shoot. Press the joystick button to fire your laser.

When you see text questions at the bottom of the screen (such as "Open Door?", "Use Elevator?", etc.) use the joystick to highlight your choice and then press the joystick button to take the action.
